And three score years before as Mayor,
The sword of this city he did bear.
Nine of his wives do with him lie,
So shall the tenth when she doth die."

IT is proposed to establish a number of stations for seismological observations throughout the world. Starting from Japan, where there is a complete system for studying earthquakes, the stations will be at Shanghai, Hong-Kong, Calcutta, Sydney, Rome, Tacubaya (Mexico), Port Natal, Cape of Good Hope, Santiago (Chili), and Rio Janeiro, with a central station at Strassburg.

SPITZBERGEN will be visited by many explorers this year. The Andree expedition will be followed by a German steamer from Hamburg which will reach in time to see the balloon start. A Norwegian steamship company will run steamers regularly to Eis Fiord. Mr. J. Russel Jeaffreson, of the Geographical Society, will explore the interior of the Western Island, and, if the ice will permit, try to visit the islands between Spitzbergen and Franz Josef Land. Another English expedition, with Mr. Trevor Battye, who explored Colgner, has started for Spitzbergen. The relieving vessel for the Jackson-Harmsworth expedition, the steam yacht Windward, has just started for Franz Josef Land, with provisions and sledges.

A SLICE of common onion rubbed, it is said, on the spot is a certain cure for a wasp sting. If the sting be in the throat or mouth, an onion is to be slowly chewed and swallowed.

WE read in an American paper :

"The foulest blot on the history of Japan in modern times is the murder of the Korean queen. If the plot had been concocted by Turks or Chinese, the horror of the civilized world would not have been so great, for of these degenerate and cruel oriental races humane sentiments and honorable practices are not expected. But Japan seeks to be regarded as civilized. She claims and in some cases has won the right to try foreigners accused of crime by her own courts, instead of turning them over to the consular courts of their own nation, as semi-civilized peoples are obliged to do. But Japanese officers caused the queen of Korea to be hacked to death with swords, after which her dead body was carried into the garden, covered with kerosene and burned. If the Japanese government glosses over this inhuman outrage, if it does not punish to the utmost those who perpetrated it, then no foreigners can feel secure in Japan. The sympathies of the nations will be withdrawn from Japan and will be with Russia, even should she endeavor to gain a protectorate over Korea. Japan's future is involved in the swift, complete punishment of the wretches who murdered the queen of Korea."

With this paper, every Oriental Prince is a despot and does not deserve to reign long. It remarks : "The late shah of Persia reigned 48 years, which is a long time for an oriental despot to hold office before being assassinated." Republican government is no protection against assassination of its heads. This crime is now more common in civilized Europe and America than in barbarous Asia.

..

IN the same number of the same paper we also read : "Weyler's plan of ending the rebellion is not complicated. It is to kill all the Cubans he can get his hands on, combatants or non-combatants, and keep at it till they are exterminated." Such is the refined system of warfare of the West—to kill the natives and rid the country of its barbarism, to improve an unrefined people out of their home and country.

..

THE 'Philadelphia Press' remarks—

"Great Britain's Venezuelan 'Blue Book' is rightly named. The most recent exposures of its inaccuracies and studied falsifications are enough to make any self respecting Englishman feel blue over prospects of his country's success based on its misshapen contents."

..

THE *Mercantile and Financial Times* of New York and Chicago calculates that if Colonel North, the nitrate king, had lived 80 years instead of only 54, and his phenomenal financial success had continued up to that time, he would have been worth no less than \$1,000,000,000. America is already rich in billionaires without the supposititious one. That paper also remarks that fifty millionaires like the late Baron de Hirsch would solve the problem of abolishing poverty.

..

THE Rothschilds recently bought a quarter interest in the Anaconda Copper Company for \$7,500,000. They have taken another quarter for \$10,000,000.

..

IT is reported that a cousin of the Duke of Montrose, a nobleman in his own right and a lineal descendant of Robert Bruce, Sir Robert James Stuart Graham, is a humble clerk in Brooklyn. His is the dignity of labour.

..

IT has now become possible to obtain complete pictures of the internal organs, as regards their situation, size and mechanism, by means of fluorescent screens of X rays. Such is the hope of Dr. Lewy expressed to the Berlin Physiological Society. Professor Grummach observed opaque spots in the lungs of a man who suffered from consumption and hæmorrhage. The lungs being transparent to the X rays, the ossified tuberculous parts were visible. In another patient, the black lines in the arteries showed the points of ossification.

..

FROM the British Board of Trade's report on coal, it appears that, in 1894, the United Kingdom produced 188,277,000 tons, Germany 76,741,000, France 26,964,000, Belgium 20,534,000, Austria 9,573,000, Japan (1893) 3,371,000, and the United States 152,448,000 tons. Of the British possessions, Canada produced between 3 and 4 million tons and in addition imported about half her total consumption, principally from the United States. New South Wales yielded about 3½ million tons, New Zealand 500,000 tons, British India

2,821,000 tons and Natal 141,000 tons. The countries which import more than export coal were Russia, Sweden, France, Spain, Italy and Austria-Hungary. Canada, Victoria, Queensland, Tasmania, New Zealand, the Cape, India and all the minor British colonies, excepting Libnan-Borneo, come under the same category.

..

SLEEPING ascetics are being exhibited at Buda Peth. The three performing men are from twenty-three to twenty-eight years of age and are well developed. They had shewn their feats at London, in the Royal Aquarium. They can sleep from eight to thirty days continuously, without any food or drink. While sleeping, their pulse fell from 70 to 60 beats, and the respiration from 18 to 3 per minute. The temperature of the body also came down from 99.5° to 96.6°.

..

MR. T. RUDDIMAN JOHNSTON, of London, has prepared plans for a globe of double the size of that exhibited at the Paris Exposition of 1889. It will have a diameter of 84 feet, with scale of 8 miles to the inch. In it a city having 5,000 inhabitants or less will be shown. There will be a spiral gallery running round the globe for easy observation.

..

MRS. Janet Hamilton, alighting from a bus at Showland's Cross, and going along the road, was knocked down by a bicycle ridden by Bernard Clark, an excise man, sustaining injuries, both external and internal. She then sued him for £200 damages, and got a decree for £80 and costs. In making his order, Sheriff Spens said :

"This is the first action of the kind in the court, though he feared it would not be the last. A bicycle must be treated *in pari passu* with a horse vehicle. The ringing of a bell by a cyclist gave no right to run down any person who might be on the way. When a bicyclist was in such a busy thoroughfare he should have had his bicycle under such control as to be able to stop it at a moment's notice. In crowded thoroughfares, when, moreover trams and buses are added to the complication, bicyclists would do well to dismount, but, if they did not, they were bound to have their bicycles under such control as to be able to draw them up at a moment's notice. They must be held accountable for running down members of the public unless there were exceptional pointing to the responsibility of the persons injured."

NOTES & LEADERETTES,

OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

—

IN view of the gravity of the situation, three additional Italian warships started on the 18th for Turkish waters. The *Times* states that the Russian fleet at Sebastopol has been placed on a war footing and has embarked three battalions of infantry, who will go to the Bosphorus if a telegram from the Russian Ambassador at Constantinople orders such a step.

CONFESSIONS made by the conspirators arrested at Scutari, led to the discovery of a formidable deposit of bombs at Pera.

A SECOND letter on the Armenian question from Lord Rosebery says that he is unable to agree that Great Britain might depose the Sultan in view of Russia's resolve to oppose the separate action of any Power. The Government, he adds, is doubtless doing everything not involving European war to put an end to the present detestable régime in Turkey. The series of meetings to be held in all the great towns of Great Britain on the Armenian question, opened on the 18th at Birmingham and Nottingham, where strong speeches were made demanding the intervention of the British Government in Turkey. Lord George Hamilton, replying to the resolution urging British initiative in Armenia, strongly deprecated isolated action. The tone of the majority of the papers is more moderate in discussing the Armenian question, and the journals deprecate undue pressure being brought to bear on the Government. The *Figaro* publishes a stirring appeal from Mr. Gladstone to the French people on behalf of the Armenians and denouncing the infamy of the Sultan. Mr. Gladstone received an immense ovation at the Liverpool meeting on the 24th, and spoke for one hour and twenty minutes in a ringing, clear voice. He pointed out that the movement was not a crusade against Mohamedanism nor universal condemnation of the Moslems of the Turkish Empire, and

that if the Armenians were Moslems or Hindus they would have the same claim to British sympathies, as the movement was a purely humanitarian one. He urged that the first step of the Government should be to break off relations with Turkey. The Liberal papers approve of Mr. Gladstone's remarks. The Conservative papers deprecate isolated action. The *Times* says that at least two Powers would not tolerate the coercion of Turkey.

BARON BANFFY, speaking in the Hungarian Diet, said that Austria and Russia had agreed to a pacific policy, and would maintain the *status quo* in Eastern Europe.

THE Sirdar, Sir Herbert Kitchener, occupied Kerma at daybreak on September 18, without opposition. The enemy retired to the west bank of the river at Hafir, and were shelled by the Egyptians from the east bank, enabling three gunboats to proceed to Dongola. The Dervishes lost heavily, and their steamer was sunk. Bishara, the Commander of Mahdists, was seriously wounded. The Dervishes abandoned the bulk of their munitions and a great store of grain at Hafir. A letter from Sirdar Sir H. Kitchener offered pardon to Wad Bishara and his followers if they surrendered. The whole expedition advanced on Dongola on the 21st. The Dervishes fled on the approach of the Egyptians. Many of the Emirs surrendered. The Egyptian flag has been hoisted over the city. Nine hundred prisoners were captured at Dongola, besides six guns and large quantities of dates. The gun boats and Cavalry are pursuing the Dervishes, who fled in a southerly direction, immediately the Egyptian Army came in sight.

The French and Russian press disparage the success of the Nile Expedition while reminding Great Britain that the Egyptian question remains to be settled. The *Times* says that the refusal of France to permit the use of the Egyptian funds in the Nile expedition has resulted in economies involving such hardships on the officers and troops that it is Britain's duty to assist monetarily.

ANOTHER conference has been held at the Motoppo Hills between the leading Chiefs and Messrs. Currington and Rhodes. The Chiefs have submitted and agreed to settle in the open.

THE rebellion in Mashonaland is collapsing, similarly to that in Matabeleland.

RUSSIA and Japan have agreed to a joint protectorate over Corea, which the Japanese will now evacuate.

A QUANTITY of arms, bombs and Japanese flags have been discovered at Taal, in the Philippines.

THE leading members of the new Japanese Ministry are: Count Matsukata, Premier and Finance Minister, Viscount Takashima, Minister of War, and Count Okuma, Minister of Foreign Affairs.

THE Tsar and Tsarina arrived at Balmoral on September 23 in company with the Prince of Wales and the Duke of Connaught. The railway all along the route was strictly guarded by police.

ON September 23, Victoria, the Queen of England, exceeded the longest reign of any former British Sovereign, and received congratulations from all parts of the world.

At supper, at the Fancy Dress Ball, at Viceregal Lodge, Simla, given by their Excellencies the same night, the Viceroy proposed the health of Her Majesty the Queen in the following terms:—

"The presence of this distinguished company must make this day a memorable one, but I hope I shall be pardoned if I remind you that it is also a day that cannot fail to be memorable in the history of the British Crown whose subjects we are, and in the life of our beloved Sovereign. The fact that her reign is now the longest in British history offers enticing opportunities for eloquence, but do not be alarmed, I shall not risk the just resentment of the young ladies by interfering for more than a moment with the proper business of the evening, but the Queen belongs to us all, and though Her Majesty has ordered all official ceremonies to be postponed, I cannot think that a word on an event that must be so overwhelmingly interesting to herself, will be deemed inappropriate.

It is as useless for me to attempt to indicate, as it is impossible for you to realise all that this event must mean to the Queen, and I confess that the feeling that is uppermost in my mind is, how unapproachable, how isolated, if I may say so, how lonely her position is. Few of us can look back over sixty years. Sixty years ago, Miss Eden was writing her most interesting diaries, and the whole society of Simla, I believe, consisted of not more than 150 persons. Few, if any, can look back to 60 years of public duty, none to 60 years in a station on which the eyes of the whole world are fixed. To take but one of the incidental consequences of this long period, what must it mean to one so placed, and that one a woman, to feel, as she looks back on the past, that of the counsellors in whom she learned in her youth to trust, not one remains to her, nay more; that successive generations of her servants have passed away, until, if I may be permitted an illustration that brings the fact home to me, she entrusts the high office of her representative in her Indian Empire to one on whom in his cradle she bestowed her name when already she had been seated twelve years upon her throne? I cannot but think that, if not to-day, there must have been moments in the past, when this feeling of loneliness must have been present with terrible force, but I also venture to hope that it has always been accompanied by the best antidote in the consciousness of the love and devotion of every one of her subjects.

It is a devotion for which we can claim no credit. It has been fairly and honestly earned. It may be that in the line of her progenitors there have been Sovereigns as renowned as Queen Victoria, though I hesitate to affirm it. It may be that there have been those who added as largely to the power and influence of the nation, though it is hard to believe it of the Sovereign who is the first of her race to wear the Imperial Crown of India as well as the Royal Crown of Britain, but I assert absolutely and unaffectedly and without fear of challenge that none will live longer in the affectionate remembrance of her people. Every inch a Queen, and bearing the burden of Royalty, as few have ever borne it, it is known to all that her dignity has never checked the ready flow of that womanly sympathy which has so constantly ministered to the afflictions of her subjects of every degree in every part of her wide dominions. That alone, even if it stood alone, would, I think, justify my intervention this evening, and our claim to a loving interest in all that concerns Her Majesty. That alone, taken with all it embraces and implies, justifies me on this occasion when I give you the old familiar toast in the old familiar formula, to ask you to allow the chord in your hearts, which I believe this toast always touches, to vibrate yet more strongly, and your lips to murmur with a fuller, wider and deeper significance than usual the well-known prayer 'God Save the Queen.'

Yesterday, after consultation with the heads of representative Associations, the Sheriff of Calcutta despatched the following telegram to the Private Secretary to Her Majesty: "The citizens of Calcutta loyally offer to Her Majesty the Queen-Empress their respectful and affectionate congratulations upon her glorious reign having exceeded in duration that of any British Sovereign." The reply received runs: "Queen-Empress thanks the citizens of Calcutta for their kind and loyal congratulations."

THE office of Meteorological Reporter to the Government of India is located at Simla. Mr. Eliot is the present Reporter. The most important meteorological stations are the Calcutta, Bombay and Madras, for observation of cyclonic storms formed more in sea than on land. The Reporter receives telegrams from the several stations and publishes the digest of reports from the three presidencies. The local Reporters of the three chief cities have publications of their own. They are of immediate value to vessels, among others, apprising them of the approach of any storm. Mr. Eliot's late deliverance is in keeping with the royal style of the Government he represents. He has chosen his head-quarters on the heights of Simla, occasionally coming down to the seas for inspection of the minor stations in the islands. But he has experience. He is the author of a hand-book of Indian cyclones compiled from official records.

A hill station is good for astronomical observations, but Mr. Eliot has no pretensions to that branch of knowledge. The connection of the maximum number of solar spots with drought and vibrations of the magnetic needle is wellknown, though the theory has not passed the stage of speculation. Continued observations are wanted to establish or demolish it. The relation of snowfall on the hills with the low temperature in the plains and the rainfall, requires special observation. Little or nothing seems to have been done towards that end. Mr. Eliot's love of astronomy is testified to by the observatory in Bombay, the only one of its kind in India. The brothers C. and F. Chambers have been obliged to withdraw from their useful work by the interference of Mr. Eliot and his predecessor, Mr. Blandford. The Imperial centralizing power of the present Reporter is proof of his capacity for organization though at the sacrifice of usefulness. The Bengal office of meteorology has no independent existence, having been incorporated with that at Simla, and, to provide a favourite, allowed to remain at Cal-

cutta, as a second Simla office. An attempt is now being made to make the two offices distinct.

THE Indian Post-Office Act has been amended to enable the Post Office to recover the customs duty paid by it, in any foreign port, on any letter, parcel or other article, as postage under the Act. That means delay in the delivery of the articles. With all its advancement, the Indian Post Office presents the spectacle of the greater the income on a letter, the greater the delay in its delivery. Last week, our London letter was forwarded to this office at the third delivery instead of the first, because there was postage due on it. For the same omission, or insufficient postage, this week's letter was not received till full one day later. It is sufficiently bad that an unpaid or insufficiently paid letter is charged double the postage payable. It is intolerable that for that enhanced value there should be extraordinary delay in delivery, or double penalty for one omission. English law delights in double remedies. Offences against person are generally punishable criminally and civilly. To an aggrieved person, both criminal and civil courts are open. Sometimes people post their letters bearing in the belief that the letters will not be misdelivered. They little know that such letters reach their destination much beyond the usual time. The more you secure your letter, by registration and insurance, the greater the certainty of late delivery.

THE High Court has set aside the conviction of Bahon Gopal Chunder Bose, Subordinate Judge of Comilla, and ordered refund of the fine of Rs. 20 inflicted for assault on a peon, named Paranda Paray. It appears that Paray, a dismissed servant, obstructed the Bahon in his morning walk and tried to recover from him then and there the wages due. The man's whole attitude was threatening. The Bahon, to put a stop to the threats and to teach better manners, gave him a blow with the stick he had in hand, which silenced the overbearing Paray. He bore the assault without any return, but made his way to the Magistrate's Court which punished the assaulter. Servants as a class have grown less respectful, as they have grown more idle and conscious of the rights of free men. Unmindful of duty and living an easy life, they are clamorous for full pay for the days they think they have served to the satisfaction of their own easy conscience and prove impertinent when they are taken to task for idleness or negligence. They are unwilling to leave service which brings them pay without sufficient work and grow turbulent when told to go their way. They try all their machinations to inconvenience the master and bring him to trouble and disgrace. The High Court's order recognizes the present state of things. There are, however, magistrates who think that, when a servant or a creditor grows unruly for his dues, he deserves consideration for any rash act committed. He, it is argued, acts not without provocation. With such magistrates, the argument that a servant or a creditor should go to a civil court for his dues has not the full force of reason. They believe that the man has a right to dun a master or a debtor for payment. True, there are courts to enforce it. But then that fact does not take away the other right. Besides, courts are costly and dilatory.

BABU Ananda Krishna Mullick, of Shampooker, has done another public service to the Hindus of this city. On his advice, Babu Grish Chunder Bose, a timber merchant of Nimala, once a partner of the late Babu Taruk Chunder Pramanik, and now doing business on his own account, has deposited with the Port Commissioners Rs. 7,000 for a *Gumbashi* or moribund house to be built close to the Nimala Burning Ghat. This is not his first good act for which he will be blessed. Two years back, he erected a chandny or shed for the female bathing ghat next to Radhu Madhub Banerjee's at Nimala. A widower and without any children, we hope Babu Grish will leave behind him a truly honoured name, like that of his partner in trade, for unostentatious charity.

THE General Committee of the Calcutta Corporation has sanctioned Rs. 3,000 to be placed at the absolute disposal of the Health Officer, for better cleansing of the city, in view of the outbreak of plague—suspected to be bubonic—at Bombay. Dr. Simpson has deputed one of his assistants to Bombay to study the disease there.

Plagues are usually malignant fevers of the continued and contagious type. It is said that they are produced by the absorption of poisons, generated by decaying animal matter combined with heat, moisture and bad ventilation. Various kinds of plagues are mentioned in old books, such as malarial, carbuncular, bubonic, &c. In the bubonic there is enlargement of glands, chiefly of the inguinal. There is great

restlessness, pain and heat, followed by death in three or four days. In the Chinese plague, Kitasato of Japan discovered a bacillus as the cause. The bacilli may, therefore, be supposed to work the havoc through drinking water. Bad ventilation and sewer gas aggravate the disease. Land quarantine to check its spread is impossible.

POOR Soochait Singh is dead, and none so poor to do him reverence. The *Tribune* of Lahore says that "except a few venerable ladies in the *Rani mahal* and some old servants and companions, there are few to weep for him even in his native place." The Calcutta Babu as represented by the *Indian Messenger* knows him not. That paper asks who was he? Perhaps, with abundance of knowledge it objects to the honorific prefix "His Highness." His was a miserable end:

"An inquest was held by Dr. H. R. Oswald on Friday, Aug. 21 at Hammersmith, with reference to the death of Soochait Singh, Prince of Chumha, Punjab, aged about fifty-five, who was found dead at 14 Wubeck Road, Shepherd's Bush, on Monday night. Mlle. Marie Valvir Couronne, a young French woman, said that for four years she had lived with the deceased as his wife. His health was not very good, and he drank to excess, principally rum. On Monday he went out at midday without having had any food, and was brought home later by two men. He was either drunk or dying. Witness tried to get a woman to help her, but she did not come. All the evening he lay on the floor in the passage with a pillow under his head. Later she was sure he was dying, and called to a neighbour, who sent for the police and a doctor. By the Coroner:—He came to England to ask the Government to reinstate him in his dominions, he having been dethroned. He received, however, a small pension from the Indian Government. The Coroner said that, from documents found in possession of the deceased, it appeared that he was claiming from the Indian Government for losses and damages sustained by refusal of his birthright, the loss of the Raj of Chumha, and over 200,000*l.*, irrespective of the loss of his personal property in the Palace of Chumha and loss of rank, dignity, and social position. He had also addressed members of Parliament, explaining that on the death of his brother Sri Singh he became Raja but that his illegitimate half brother was unlawfully made Raja, and that he (deceased) had come to try and regain his position, and could get no recompense. He appeared to be in possession of a pension of 22*l.* a month, whereas he had asked for 100*l.* a month. Other evidence showed that the deceased was seen staggering about the pavement in Wubeck Road with a large bunch of keys and several parcels. He was seen to fall, and was picked up unconscious and carried home. Dr. David Arthur of 276, Uxbridge Road, said he was called after death. A *post mortem* examination revealed a blood clot on the brain. This was caused by the rupture of an artery. Death was due to coma from the hæmorrhage caused by chronic alcoholism. The jury returned a verdict of natural death."

Last year (*R. & R.*, June 8, 1895), we wrote of Chamba and Soochait Sing. We reproduce a portion of that account:

"The State of Chamba is an ancient one, having been founded, at some remote period of antiquity, by a scion of the House of Udaipore. At the time of the conquest of the Punjab when it first came under the aegis of the British Government, it was ruled by a Prince whose name was Maharaja Surat Sing. He died within a few years, leaving two sons, the elder of whom Sri Sing succeeded the father. The two brothers dearly loved each other at first. Subsequently there arose a cause for jealousy, for which the younger, Suchet Sing, was debarred access to the palace. An annuity of Rs. 24,000 was settled upon him. The strained feeling between him and his brother led him to leave his native country and to seek for a sphere of activity in the service of Maharaja Ranbir Sing of Kashmir, who was the husband of his sister. With the keen eye for an asuring the capacity of men which Maharaja Ranbir possessed, he saw the man in his brother-in-law, appointed him Commander-in-Chief, and placed him at the head of the army which he was then about to send towards the north-eastern frontier of his dominion. The expedition proved highly successful; Suchet Sing conquered Ladak, and a large slice of territory was permanently annexed to Kashmir. As a reward for the service, Maharaja Ranbir granted a valuable Jagir to his brother-in-law together with the title of Raja. While Suchet was in Kashmir, Sri Sing placed the management of his State in the hands of the military officer whose name was Colonel Reid. This was a very injudicious step on the part of Sri Sing and he suffered grievously for it. He was soon made quite a nonentity, and the Colonel usurped all the functions of the Raja, public as well as private. In the year 1870, Raja Sri Sing died, and Colonel Reid, knowing that Suchet was the next heir and in the belief that he would prove a master of the same nature as his deceased brother, at once wrote to him to come back to his native land, and to take charge of the Raj. Suchet Sing arrived at Chamba and in due time performed the funeral obsequies of his brother. If he had then quietly taken possession of the Raj, and overlooked the peccadilloes of Colonel Reid, there would probably not have been any dispute as to his title to it. But even before assuming the reins of power he gave serious cause of offence to the great Colonel by issuing a proclamation direct-

The Indian Association for the Cultivation of Science.

Lectures by Babu Rajendra Nath Chatterjee, M.A., Wednesday, the 30th Inst., at 5-30 P.M. *Subject*: Pumps (concluded). Instruments depending upon the properties of Air.

Dr. D. N. Chatterjee, the 1st Oct., at 5-30 P.M. *Subjects*: Vermes, Dr. M. L. Sircar, the 2nd Oct., at 7 P.M. Change of State by Heat. G. C. Bose, the 3rd Oct., at 5-30 P.M. Morphology—Flowers. Dr. Nilotan Sarkar, the 3rd Oct., at 6-30 P.M. *Subject*: Histology—Bone, Muscle.

ing the chief officials of the State to obey him alone, and not the manager. This step may to an outsider seem very foolish, and so it was no doubt from the point of view of cool and calculating men of the world. However, the motive which led Suchet to act in the way that he did, was not on the surface of things, and could not be revealed, while the proclamation, on the face of it, was an act of rashness and disloyalty to the ruling caste for which there could not apparently be any excuse. So Colonel Reid reported to Government that the rightful heir to the Raj was one Gopal Sing, an illegitimate son of the deceased Raja Sarat Sing. With such resources as Colonel Reid commanded, he found no difficulty in prevailing upon the Government of the Punjab to adopt his views. The Government was then led to place Gopal Sing on the *gadi* of Chamba, and obtained the sanction of the Viceroy and the Secretary of State to the arrangement, with such despatch as to render the subsequent appeals of Suchet quite futile.

When it became known in Chamba that Gopal Sing was about to be made its Raja, Suchet repaired to Lahore to establish his claims to the Raj. The appointment of a bastard as Raja was extremely unpopular among the people of Chamba, and as Suchet was their idol, he was followed by several thousands of them to Lahore. When Suchet interviewed the authorities there, he was told that they were not prepared to give him any redress so long as his followers remained with him, and that if he wanted his case to be properly heard, he must first of all send them back to their native country. The Chambites were very loth to part with their lawful Raja, and by the time they were prevailed over to go back to their homes, Sir Lepel Griffin and Colonel Reid had completed all their arrangements for excluding Suchet from the *gadi* of Chamba for ever.

When the Government of the Punjab ultimately refused to recognise the just and obviously superior claims of Suchet, he appealed to the Viceroy. Lord Northbrook was personally convinced that Suchet had justice on his side; but as the Secretary of State had given his sanction to the elevation of Gopal Sing, he, in accordance with the advice of some of his Councillors, felt himself bound to treat that order as final. By this time the position of Gopal Sing had, in spite of the support of the authorities, become very uncomfortable. The taint of illegitimacy was so well known that he could not possibly command the respect of his subjects, and he became quite tired of the burthen of an honour to which he was not born, and which he never asked or expected, but which was forced upon him to serve other persons' purposes. So when, in the year 1873, Suchet's Minister asked him to abdicate the Raj in favour of the rightful heir, he readily consented and executed a formal deed to that effect. This step on the part of Gopal Sing threatened to upset the plans of Politicians. But they were quite equal to the occasion. They discovered immediately that Gopal Sing was a lunatic and, after subjecting him to a most humiliating medical examination, obtained a certificate to that effect from an official *Æsculapius*. Gopal Sing was then dethroned and his minor son Sham Sing, a boy of seven years, put in his place.

With the deed of abdication executed in his favour by Gopal Sing, Suchet appealed to the Secretary of State. His case was now so strong, that there was not the shadow of an excuse for rejecting it summarily; yet, strange to say, the Secretary of State felt himself bound by the order of his predecessor, and refused to grant Suchet any redress.

Disappointed in India, Suchet proceeded to England for prosecution of his rightful claim. There were not wanting Englishmen who wanted to see justice done him. For one, Lord Stanley of Alderley had pointed out in the House of Lords that the Duke of Argyll, the then Secretary of State for India, was deceived by a false statement that Gopal Singh was the whole brother of Sri Singh and Suchet Singh the half brother. The misstatement was corrected three months later as a clerical error, after the mischief was done. An attempt was recently made to make him bankrupt in order to bring his affairs before the public, when he was in extreme poverty. Wrong-headed and too simple, playing into the hands of the subordinates of the India Office, who would not like to see old matters raked up, he resisted. He now dies worse than a dog in the streets of London—a victim to wilful misrepresentation and the doctrine of *dictum valet*.

REIS & RAYYET.

Saturday, September 26, 1896.

THE INDIGENOUS DRUGS OF INDIA.

THE multifarious varieties of plants, distributed according to temperature and altitude, make India in this respect, as it is in many others, an epitome of the world. Commencing from sea-level and rising to a height of twenty thousand feet and over, it has almost all the characteristics of the various climes and climates of the earth. The peninsular and the non-peninsular areas are stocked with genera of plants peculiarly their own, though a few common species can be found among them. From the Nilgiris to the Vindhya chains, bounded by the two Ghats, watered by the monsoon clouds of the two seas, and intersected by many noble rivers, the peninsular area has a marked

peculiarity. The non-peninsular portion, extending from the borders of the Chin Hills on the east to the scientific frontier on the west, covers various tracts of land quite unlike the peninsular area. The high Himalayas continuous with the Chinese mountains and running to the north of Persia, up to Arabia, divide Asia into two vast regions, the northern and the southern. The superb grandeur of its vales and dales, a rich storehouse of medicinal plants, has been the talk of ages, and the admiration of travellers, ancient and modern. The mountains of eternal snow have been traversed for geographical, geological, and other purposes. General Waugh and his associates, Pandit Nayan Sing and his comrades, Babu Sarat Chandra Das and Lama Uggyan Gyatcho have been the modern explorers. The Pandit and those who come after him penetrated as far as Lhasa. Sir Joseph Hooker, in his "Himalayan Travels," describes the distribution of vegetation. The geological survey was made under the directorship of Drs. Medlicott and King. Little has, however, been done in the botanical line. The eastern and western Himalayas, at the same altitude and temperature, differ in the distribution of plants. The Khasia and Manipur hills make a separate group. The Gangetic delta and the Sunderbuns, with south, north, east and west Bengal, form a different series of areas. Behar is an analogous complement of Bengal in its essential features. As we proceed to the North-West Provinces, the vegetation changes gradually till we reach the frontiers of Rajputana and the Punjab where it assumes a wholly new character. From the Punjab to Afghanistan and Persia, there is, again, a fresh variety.

The term "indigenous" is derived from the Latin *indigena*, born in a country. Indigenous drugs properly mean medicinal substances which are the native growth of a country. But this original signification has been much widened in the practical acceptance of the term. Thus indigenous drugs are variously divided. In the first category are included plants which have become wild in one country, though imported from other countries. The second is reserved for transplanted cultivated plants. The third is made to include importations from other countries and sold in the market. To distinguish the aboriginal and the wild plants supposed to be imported into this country, is a very difficult task. To trace their origin is by no means easy, for no cultivation is required for their growth. Attempts have been made by botanists of repute, but their inferences are not always correct. For instance, it is supposed that Carica Papaya (Pempe) comes from South America. Ananassa Sativa, (Anaras) pineapple, is said to have been transplanted from Brazil to Europe in 1513 by Goncalo Hernandez, and subsequently brought to Bengal in 1594. Argemone Mexicana (Sialkanta) runs wild from Bengal to the Punjab. It has been mistakenly identified with Bramhadandi (*Lamprachoenium Microcephalum*). Eupatorium Ayapana is wrongly said to be Bisalyakarani. It is a native of Brazil, South America. Anona Squamosa (Ata) custard apple has been introduced from the West Indies. Doubts are entertained of Nicotiana Tabacum (Tamak) having been brought to this country from Mexico. Tagetes erecta (Gandha) may be a possible importation from that country. It is used as a substitute for calendula by homœopathic practitioners and others. Calendula officinalis of Europe is cultivated here but to a little extent. Jatropha curcas (Bagbharanda) is American. Capsicum annum

and *Frutescens* (Lanka) have been ascribed to the same source. So also *Anacardium Occidentale* (Hijli Badam), the cashew nut, *Aleurites Molluccana* (Akhrot), Indian walnut, came from the Malay Archipelago. *Arum Triphyllum* (Bhetkole) is a native of America, though now common in Bengal. Roses are from Persia and Turkey in Asia. The habitat of *Viola odorata* and *Tricolor* (Banafsha) cultivated in the gardens of Bengal, is Persia. *Pimpinella Anisum* (Mauri), plentiful in northern India, is said to have also come from Persia.

The cultivated plants are also many in number. *Cinchona*, from South America, has been transplanted in the Nilgiri and Himalaya mountains. *Ipecacuanha* can be seen near Ootacamund. *Alpinia Galanga* (Kulinjan) comes from Sumatra and Java and is cultivated in East Bengal and South India. *Balsamodendron Myrrh* (Persian Mur, Hindi Hirabol) is Arabian and found in Western India. *Benincasa Cerifera* (Sada Kumrha, Chal Kumrha) is supposed to be a native of Japan and Java. In Bengal it flourishes on the tops of thatched huts. The European *Exogonium Purga* (Jalap) is grown in the Nilgiri and Himalaya mountains. *Eucalyptus Globulus*, a native of Australia and Tasmania, is cultivated on the mountains. Specimens can also be found in Messrs. S. P. Chatterjee's Nursery, at Narkaldanga, Calcutta. *Glycyrrhiza Glabra* (Jasthimadhu, Hindi Mulhati) Liquorice of South Europe, Asia Minor, Persia, and Afghanistan, is grown near Peshwar. *Jateorhiza Palmata* (Calumba) is found in the Bombay Presidency. *Melia Azedarach*, (Mahanimba, Ghorha-nim), Persian Lilac, is no stranger to Bengal. *Mallotus Philippensis* (Sans. Kampillaka, Beng. Kamalaguri) came from the Philippine Islands. *Mimosa Pudica* (Lajjabati) has its home in Brazil, South America. *Drosera Rotundifolia* of Europe is cultivated in the Nilgiris. Plants which are delicate in their nature can also be grown in India. Almost every year the number of exotics is increasing. Drugs, which are not produced in India but sold in the Indian market, have been improperly included among the indigenous products. They consist of almost all kinds of medicinal plants used by the practitioners of the Kaviraji, Yunani, allopathic, and homœopathic systems. The Mahomedan school gets its supply from Persia, Afghanistan and Arabia; the European schools, mostly from Europe and the Hindu from India chiefly.

An important consideration is the variation of plants distinct from transplantation. It is an admitted fact that there is difference in the same species in different parts of the same country. The difference is greater in transplantation. Charles Darwin writes:

"Changes in conditions of life are of the highest importance in causing variability, both directly by acting on the organisation and indirectly by affecting the reproductive system. It is not probable that variability is an inherent and necessary contingent, under all circumstances. The greater or less force of inheritance and reversion determine whether variations shall endure. Variability is governed by many unknown laws, more especially by that of correlation. Something may be attributed to the definite action of the conditions of life, but how much we do not know. Something must be attributed to use and disuse. The final result is thus rendered infinitely complex. In some cases the intercrossing of aboriginally distinct species, has probably played an important part in the origin of our domestic breeds. When several breeds have once been formed in any country, their occasional intercrossing, with the aid of selection, has, no doubt, largely aided in forming new sub-breeds; but the importance of crossing has been much exaggerated, both in regard to animals and to those plants which are propagated by seed. With plants which are temporarily propagated by cuttings,

buds, &c., the importance of crossing is immense; for the cultivator may here disregard the extreme variability both of hybrids and of mongrels, and the frequent sterility of hybrids; but plants not propagated by seed are of little importance to us for their endurance is only temporary. Over all these causes of Change the accumulative action of Selection, whether applied methodically and quickly, or unconsciously and slowly but more efficiently, is by far the predominant Power."

Alfred Russel Wallace, a colleague of Darwin, says:—

"The variability of plants is notorious, being proved not only by the endless variations which occur whenever a species is largely grown by horticulturists, but also by the great difficulty that is felt by the botanists in determining the limits of species in many large genera."

There are three kinds of variations generally found: 1. Individual variation, 2. Variation of species, 3. Constitutional variation or acclimatisation. Individual variation is the difference between members of the same family.

"Every one knows that in each litter of kittens or of puppies no two are alike. Even in the case in which several are exactly alike in colours, other differences are always perceptible to those who observe them closely. They will differ in size, in the proportions of their bodies and limbs, in the length or texture of their hairy covering, and notably in their disposition. They each possess, too, an individual countenance, almost as varied when closely studied as that of a human being; not only can a shepherd distinguish every sheep in his flock, but we all know that each kitten in the successive families of our old favourite cat has a face of its own, with an expression and individuality distinct from all its brothers and sisters. Now this individual variability exists among all creatures whatever, which we can closely observe, even when the two parents are very much alike and have been matched in order to preserve some special breed. The same thing occurs in the vegetable kingdom. All plants raised from seed differ more or less from each other. In every bed of flowers or of vegetables we shall find, if we look closely, that there are countless small differences in the size, in the mode of growth, in the shape or colour of the leaves, in the form, colour, or markings of the flowers, or in the size, form, colour, or flavour of the fruit. These differences are usually small, but are yet easily seen, and in their extremes are very considerable; and they have this important quality, that they have a tendency to be reproduced, and thus by careful breeding any particular variation or group of variations can be increased to an enormous extent apparently to any extent not incompatible with the life, growth and reproduction of the plant or animal."

Variation of species means the change which takes place in the growth of the plant or the animal from the original or the parent stock, in a way to make it quite different in appearance.

"The experience of breeders and cultivators, however, proves that variation is the rule instead of the exception, and that it occurs, more or less, in almost every direction. This is shown by the fact that different species of plants and animals have required different kinds of modification to adapt them to our use, and we have never failed to meet the variation in that particular direction, so as to enable us to accumulate it and so produce ultimately a large amount of change in the required direction. Our gardens furnish us with numberless examples of this variety of plants. In the cabbage and lettuce we have found variation in the size and mode of growth of the leaf, enabling us to produce by selection the almost innumerable varieties, some with solid heads of foliage quite unlike any plant in a state of nature, others with curiously wrinkled leaves like the savoy, others of a deep purple colour used for pickling. From the very same species as the cabbage (*Brassica Oleracea*) have arisen the broccoli and cauliflower, in which the leaves have undergone little alteration, while the branching heads of flowers grow into a compact mass forming one of our most delicate vegetables. The brussels sprouts are another form of the same plant, in which the whole mode of growth has been altered, numerous heads of leaves being produced on the stem. In other varieties the ribs of the leaves are thickened so as to become themselves a culinary vegetable; while in the Kohlrabi, the stem grows into a turn-pike mass just above ground. Now all these extraordinarily distinct plants come from one original species which still grows wild on our coasts; and it must have varied in all these directions, otherwise variations could not have been accumulated to the extent we now see them. The flowers and seeds of all these plants have remained nearly stationary, because no attempt has been made to accumulate the slight variations that no doubt occur in them."

Though the variations are great and extensive, yet a strict examination shows them to be links of the same chain. A. de Candolle, a celebrated botanist, in his

memoir on the variety of the oaks of the whole world, emphatically remarks :

"They are mistaken, who repeat that greater part of our species are clearly limited, and that the doubtful species are in a feeble minority. This seemed to be true, so long as a genus was imperfectly known, and its species were founded upon a few specimens, that is to say, were provisional. Just as we come to know them better, intermediate forms flow in, and doubts as to specific limits augment."

The same author in his "Origin of Cultivated Plants" has tried to find out the habitat of some of the plants by the help of this intermediate connecting link and ancient literature. It is a very difficult task, no doubt, but an extensive study as well as knowledge of botany can remove most of the difficulties. A French botanist, M. Naudin, after a study of years of melon (*Cucumis Melo*) has come to some conclusions. He found that previous botanists had described thirty distinct species while there was only one. The varieties, indeed, differ in fruits, foliage and mode of growth. Some are large, while others are small as plums. One has a scarlet fruit. Another is not more than an inch in diameter but more than a yard in length, twisting about in all directions like a serpent (*chichenda*). Some are like cucumbers; an Algerian variety, when ripe, cracks and falls to pieces like the wild gourd (*C. Momordica*). Such variations have been pointed out by Darwin in his "Domesticated Animals and Cultivated Plants."

Regarding constitutional variation or acclimatisation, we find :

"A very important kind of variation is that constitutional change, termed acclimatisation, which enables any organism to become gradually adapted to a different climate from the parent stock. As closely allied species often inhabit different countries possessing very different climates, we should expect to find cases illustrating this change among our domesticated animals and cultivated plants..... Among animals the cases are not numerous, because no systematic attempt has been made to select varieties for this special quality. It has, however, been observed that, though no European dogs thrive well in India, the Newfoundland dog, originating from a severe climate, can hardly be kept alive. A better case, perhaps, is furnished by merino sheep, which, when imported directly from England, do not thrive, while those which have been bred in the intermediate climate of the Cape of Good Hope do much better. When geese were first introduced into Bogota, they laid few eggs at long intervals, and few of the young survived. By degrees, however, the fecundity improved, and in about twenty years became equal to what it is in Europe.....Plants furnish much more important evidence. Our nurserymen distinguish in their catalogues varieties of fruit trees which are more or less hardy, and this is especially the case in America, where certain varieties only will stand the severe climate of Canada. There is one variety of pear, the Forelle, which both in England and France withstood frosts that killed the flowers and buds of all other kinds of pears. Wheat, which is grown over so large a portion of the world, has become adapted to special climates. Wheat imported from India and sown in good wheat soil in England produced the most meagre ears; while wheat taken from France to the West Indian Islands produced either wholly barren spikes or spikes furnished with two or three miserable seeds, while West Indian seed by its side yielded an enormous harvest. The orange was very tender when first introduced into Italy, and continued so long as it was propagated by grafts, but when trees were raised from seed many of these were found to be hardier, and the orange is now perfectly acclimatised in Italy. Sweet peas (*Lathyrus odoratus*) imported from England to the Calcutta Botanic Gardens produced few blossoms and no seed; those from France flowered a little better, but still produced no seed, but plants raised from seed brought from Darjeeling in the Himalayas, but originally derived from England, flower and seed profusely in Calcutta."

The same may be said of tea in India. Chinese tea would not thrive and Assam leaf only is grown. These facts clearly show the difficulty of sudden adaptation. It, however, becomes possible after an intermediate change. The transplantation is difficult from a cold to a hot climate, and *vice versa*. That from America to India was more encouraging, for equality of climate.

There are other peculiarities. Most closely allied species are found in distinct areas. *Aconitum Ferox* is generally found in the temperate Sub-Himalayan regions, from Sikim to Gharwal, at an altitude of ten to fourteen thousand feet. *Aconitum Napellus* is also found in the Western Himalayas almost at the same height. *Ferox* can be had at Darjeeling and *Napellus* at Simla. Both varieties are almost similar. *Napellus* contains a large quantity of aconitine, while *Ferox* has pseudo aconitine. The first difference is in appearance. *Napellus* produces a great tingling sensation, and the tongue after a few minutes appears benumbed and there is difficulty in swallowing. *Ferox* does not produce these symptoms. In fever and cholera both are efficacious. The best *Citrus Aurantium* (Kamla nebu) are from Sylhet. The Nagpur and Darjeeling ones are not so good. There is an essential difference between the two kinds. The Sylhet oranges are both acid and sweet and, therefore, preferred to the Nagpur and Darjeeling varieties which differ in taste and appearance. *Ficus Elastica*, or the Indian rubber tree, is abundant in Assam, up to the Sikim hills. *Strychnos Potatorum* (Nirmali) abounds in the peninsular area, extending to the Kymore range. The indigo of Bengal and the N.-W. Provinces differs from that of the Bombay Presidency.

The consideration of variation of plants leads to an examination of the change effected in the quality of drugs. Are cinchona trees planted in the Himalayas and the Nilgiris the same in their chemical constituents with the original Peruvian bark? The Government Quinologist, Mr. David Hooper, has found after experiment that the alkaloids of the Indian species are richer. But it is not always that the alkaloids are the same or better in quality in the transplanted plants. *Artemisia* or *santonine* (*Brinjasaf*, wrongly called *sheeh* or *sarifoon*) has different varieties according to their habitation, though many of them are of one kind. *Maritima* and *Persica* are the same as regards their flowers, which are the parts used generally. *Gelsemium Nitidum* (Jarad Chameli) shows deterioration with change of place from America to India. It is the case also with *Viola Odorata* and *Tricolor* (*Banafsha*). European *Calendula* yields a better tincture than the plant grown in Bengal. *Tagetes Erecta* is preferred to *Calendula* (*Gandha*) for quicker healing of sores. It is one of the best antiseptics.

By cultivation, again, the qualities of plants are changed. *Ananassa Sativa* (*Anaras*) is evidently a well cultivated species of *Agave Americana*. But there is great deficiency of medicinal properties in pine apple. The wild *Carica Papaya* is dreaded as a cause of rheumatism, while the cultivated has not that deleterious property.

The proper study of drugs should be to ascertain their effects when administered singly, that is, not compounded with any another. In *Makhzan-ul-Adwiya*, the words *mafrad* (single) and *marakkab* (compound) have purposely been mentioned. All the old systems of medicine are very defective in this respect. Homœopathy only can boast of progress not only in this but in all other directions.

We close our remarks with a suggestion. It is time, we should think, for a State organisation to enquire into the properties of indigenous drugs used in the various systems of treatment in vogue in India, namely, quack, Kaviraji, Yunani, Allopathic, and Homœopathic.

OUR LONDON LETTER.

August 31.

Constantinople. Particulars are coming in slowly of the frightful slaughter that has been perpetrated in the streets of Constantinople on Wednesday and Thursday of last week. The Armenians driven to desperation by the lukewarmness of the Great Powers determined to take the matter into their own hands. Hence the attack on the Ottoman Bank. If they had had a great revolutionary leader to guide them, this step might have led to serious consequences. But yielding to the persuasions of Sir Edgar Vincent, they surrendered, and were quietly shipped off to Marseilles.

But is this the beginning of the end? It would seem we are at the threshold of great events. Our ambassador, Sir Phillip Currie, appears to spend more time in England than at his post. It is said he will return to-day. What Great Britain requires to have as its representative at Constantinople, is an ambassador of the type of the great Elchi—the late Lord Stratford de Redcliffe. The Foreign Office diplomatic service is an enigma. It is a singular coincidence—there may be nothing in it—that both our Constantinople and our Zanzibar representatives are “on leave” when these tragedies happen to come off. Again, after long, long waiting, a distinguished member of the diplomatic service, Mr. Greene, is nominated to succeed Sir Jacobus de Wet at Pretoria. Does he leave in a week or ten days? Oh no? Not till the middle of October. How different all this from the heroic spirit of the late Lord Clyde! When, as Sir Colin Campbell, he was named Commander-in-Chief in India in 1857 by Lord Palmerston, the latter sent for him, and asked him when he could start? “To-morrow,” was the reply of the grand old soldier! He was nominated on the 11th July, started on the 12th, and arrived at Calcutta on the 14th August. No coddling and nursing required for him. Duty calls him to Bengal at the worst season of the year and, without a moment's hesitation, the veteran obeys. Would to god the spirit of the fine old soldier could penetrate the diplomatic service!

Crete. A settlement is being arrived at by the Powers, if only the Christian population will accept the terms that have been wrested from the Porte. These are in brief.

1. The sovereignty of the Sultan to be scrupulously respected.
2. The Vali or Governor must be a Christian.
3. The Vali in future will have a right to direct the movements of the Imperial troops during disturbances.
4. He is to have the patronage to all subordinate offices, and he is to nominate Christians to two-thirds of them.

These are the main points. “The reorganization of the judiciary and the gendarmerie is to be undertaken by special commissions on which European juriconsults and military officers will respectively serve.”

The whole new organisation will be guaranteed by the Powers. The Christians have three days in which to express approval or otherwise of these reforms, and strong appeals are being made from all quarters that these terms should be accepted, and so peace be restored to the Island. The “Times” writes: “a prompt and loyal acceptance of the concessions procured for them by the ambassadors can alone secure the continued good will of Europe to their cause, and without that good will their cause is hopeless. Nothing could excuse or palliate the criminal folly of refusal or delay.”

Zanzibar appears to be settling down under the new Sultan. There is apparently no desire on the part of our Government to interfere with the usurper Khalid so long as the Germans hold him in safe custody.

France. A curious state of things has arisen at Bordeaux, in connection with the subsidiary copper coin. It would appear that for some time past ingenious speculators have been importing vast quantities of South American copper pennies, for which they pay the mere value of the metal. When brought into France they have been enabled to put them into circulation at their nominal value, thereby securing a profit of from 60 to 70 per cent. on the transaction. This traffic has been going on for long and as a consequence the South and South West of France are inundated with these South American copper, that are practically without any value in France. But, passing as mere “tokens” they have entered largely into the transactions, of “working men, employés, and small shopkeepers.” Suddenly the railways and tramcars, with the tobacco shops, have refused to accept these coins, and the consequence is that the labouring classes find a portion of their wages or humble savings so much useless metal. Serious rioting has been the result, and the Government will no doubt have to interfere. At one time, the ten centimes piece passed current here in London, as equal to our penny, and was freely taken by the trams and ‘busses. But a stop was put to this, and now paterfamilias returning from Paris gives his odd French coppers to his children who get rid of them in the automatic sweet boxes at the railway stations.

Spain is in trouble with her Manilla possessions. Apparently, the rebel party in Cuba has active auxiliaries in many important

centres in Spain itself, and the current opinion is that the outbreak at Manilla is part of a well contrived plot to draw the attention of loyal Spaniards away from Cuba. A few weeks now will serve to let the world see whether Spain is able to grapple successfully with her bitter enemies in Cuba, as well as in Manilla. Turning to **India**, the public here has been alarmed by the reported breach of the Durand Treaty on the part of the Ameer, and fuller details are anxiously awaited. Then, on Wednesday, we heard of a “murderous attack” by some Hindus, at Bombay, on a Professor of the “Wilson” College, but as there were no further tidings yesterday, I am hopeful the first report was exaggerated.

Prince Ranjitsingji has covered himself with glory in the cricket field, and holds the proud position of being at the head of the “batting averages.” The “Times,” in a leader on the season just closed, writes: “We find that the year has been distinguished by the rise of a new star, nay, of a new sun, in the person of the Indian Prince, who in England has identified himself with Cambridge and with Sussex. His beautiful batting as perfect in style as it has been wonderful in its success, recalls the feats of Dr. Grace at the most glorious period of his career. Up to the end of August, he had scored no fewer than 2,732 runs, with the splendid average of 59 per innings.”

Aberdeen University. An amusing comedy to all but poor Professor Johnston has just closed its first stage at this ancient seat of Scottish learning. The Professor, it would appear, belongs to the fast receding school termed “orthodox.” He challenges what is called, somewhat pompously, the “higher criticism” and adheres faithfully to the ordination vows to which he pledged himself when he signed the “confession of faith.” The Divinity students of the University of Aberdeen think it the correct thing to follow the teaching of the advanced schools in the Established and Free Churches. In Scottish Divinity Halls—I hope no where else—the students are allowed to sit in judgment on their Professors. As a rule, they, the students, are a rough and ready set of youngsters who require to be kept in order with a firm hand. Professor Johnston, unfortunately for him, had to deal with a singularly rough lot, specially noteworthy for their unruly behaviour and their insolent treatment of the Professor. They petitioned the last General Assembly to sit in judgment on the Professor. The Assembly relegated the duty to the University Court, which, after hearing evidence, has found against the Professor, and recommended his being retired on a suitable pension. But Professor Johnston holds his appointment from the Crown and so he is going to appeal to the Privy Council. The church papers dislike exceedingly the idea of this appeal. To have all the miserable story repeated before a body of impartial judges such as those gifted lawyers who compose the Judicial Committee of the Privy Council, is thoroughly distasteful to the clerics.

Personally, I shall be glad if the Professor does appeal, so that he may have justice done to him. It is possible, he is not an effective teacher. But what I complain of is the submitting the teaching of any Professor to the arbitrament of the ill-informed judgment of a few immature and uncouth rustics who, as a rule, form the Divinity class of a Scotch University.

The Free Church of Scotland is in no way better than the Established Church, only its leaders go about the wretched business in a way to disarm popular indignation. It is not so very long ago the venerable Principal of the Glasgow Free Church College was treated by his students, just as Professor Johnston has been at Aberdeen. The Principal adhered to the old faiths. He is surrounded by a staff of Professors, who arrogate to themselves the “higher criticism,” and so the Principal was deprived of his Professorship, though for reasons of ecclesiastical jealousies he was retained as Principal. Again, in Edinburgh, Professor Thomas Smith, formerly of the General Assembly's and Free Church Institutions in Calcutta, was shelved, because of his adherence to the old theology. But the whole thing was done so quietly that few were aware of how the College Committee, at the rude dictation of their students, had treated these two clergymen, themselves so entitled to all honour and respect. Professor Johnston however can appeal to the Crown, and to the Crown I hope he will go. As I have said, whatever be the issue, one will be certain that justice has been meted out, and commend me to the fairplay and impartiality of skilled lawyers rather than to the judgment of rancorous, persecuting ecclesiastical judges.

BOOKS.

Memorials of Lord Selborne. So far as the general reader is concerned, this is in some respects a disappointing book. There is so much matter of a purely personal and family character, that it can only be of interest to the immediate circle of his blood relatives. When he comes to describe his school life at Winchester, his years as an undergraduate and graduate of Oxford, his residence as a

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 19 SOUTHAMPTON BUILDINGS, HOLBORN, LONDON.

law student at Lincoln's Inn, his call to the Bar, his first briefs, and his election to Parliament as member for Plymouth, the interest rises. The general reader can only wish there had been more of these pages, and less space devoted to his ancestors, his father, his brother William, his uncles, aunts and so on. The father was in no way remarkable save as an exemplary clergyman of the Church of England, well calculated to gain the warmest affections of his family. The space devoted to his brother William is out of all proportion to any interest the present generation can take in the story of this somewhat cranky don of the Church of England, who finally found rest for his weary soul in the bosom of the Church of Rome.

The passing of the work through the press has been a labour of love to his devoted daughter, Lady Sophia Palmer, and she promises us a second volume which should be of consummate interest if her father was able to fulfil his wish. In October 1888, he expressed his intention of preparing a second volume of memorials "which may bring down my personal narrative, and my recollection of the persons with whom, and the events with which I have been associated, to the time, at which my public life must close."

Roundell Palmer, first Earl of Selborne, was born on the 27th November, 1812, at his father's Rectory, Mixbury. He passed through Rugby and Winchester, before proceeding to Oxford. His principal chums at Winchester were William George Ward (who afterwards took a prominent part with Cardinal Newman in the Tractarian controversy), Robert Lowe (afterwards Lord Sherbrooke) and Edward Cardwell (afterwards Lord Cardwell). With these three he commenced his career at Oxford, where he became acquainted with two very distinguished men, intimate friends of his elder brother William, Charles Wordsworth and T. J. Claughton. The latter became Bishop of St. Albans. The former had the distinction of preparing William Ewart Gladstone for his "double first," and in after years became Headmaster of Glenalmond College, Perthshire, and eventually Bishop of St. Andrews. He was very proud of a letter he was fond of showing, written by Mr. Gladstone just after he had passed his examination with so much brilliancy, in which he acknowledged fully that his success was entirely due to Wordsworth. It was at Gladstone's instigation he left England to preside over Glenalmond, but he felt sorely the neglect with which his illustrious pupil treated him because of conscientious differences on the question of the Irish Church.

Passing from these more intimate friends, we get a few interesting glimpses of Mr. Gladstone, who was apparently Palmer's senior at the University by two or three years. When Palmer joined the "Union Debating Society," Gladstone was President. "He was a student of Christ Church, prince of the Etonians of his time, and at the head of the literary society of his house." Other speakers who met at the "Union," were Sidney Herbert (Lord Herbert of Lea), Lord Lincoln (Duke of Newcastle), James Bruce (Earl of Elgin, father of your present Viceroy), Cardinal Manning, Fred. Rogers (Lord Blachford). Gladstone was then a high Tory, and carried a resolution condemning Lord Grey's Reform Bill, in May 1831. Palmer says Gladstone's speech on the occasion "might perhaps have been repeated without change of a word by those who dissented from his own Irish measure of 1886." So changed had this rarely gifted man's opinions become in the course of half a century!

In May 1845, "Gladstone resigned his seat in Sir Robert Peel's cabinet not to oppose, but to support the Government measure for the endowment of Maynooth College. On that occasion—wrote me: 'I am curious to hear from you some explanation about the part Gladstone is taking. If ever I try to learn anything of his intentions, or the present phases of his principles, by reading his speeches, I am always left more in the dark than ever. He certainly understands how to shroud himself in obscurity and thick darkness.'" What was true of the G. O. M. in 1845, is equally true in 1896!

It will interest your friends at the Calcutta Bar to know that Palmer was offered the post of Advocate General of Bengal in 1845, but he declined it after consulting Sir James Knight Bruce and Sir John Coleridge. It was then accepted by Sir James Colville.

Preparing for his degree after his third year, he joined a "vacation reading party" consisting of five or six men, one of whom was the late Archbishop Tait. They stayed at Seaton, in Devonshire, where there was a Talit Dissenting Minister who, in hopes of one day becoming Poet Laureate, composed a poem entitled "Seaton Beach," in which a description was given of the reading party.

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

He made one of them a Bishop, and another a Judge in the following lines:

He whom near yonder cliff we see recline
A mitred prelate may hereafter shine;
That youth, who seems exploring nature's laws,
An ermined Judge may win deserved applause.

When Palmer was made Lord Chancellor in 1872, Tait, already Archbishop, reminded him of the verses.

I must reserve my notice of some other books to next week. Meanwhile, your native friends at the Bar may like to have these jottings of an eminent Chancellor.

MONGHYR.

Jamalpur, September 20.

I am sorry to say that Baboo Soorja Coomar Sen, senior Deputy Magistrate of Monghyr, who was suffering from carbuncle, breathed his last on Tuesday, the 15th instant, leaving a widow and a number of infants. He was known to be a convicting officer but otherwise mild in his dealings with the public.

We had a heavy downpour lasting for 3 days and nights bringing down several mud-walled houses. This rain has much benefited the crops, especially the local *abutta*.

The prospects of the crops are very bad and much alarm is felt. The prices of the food grains have considerably gone up and show a tendency to further rise. The best quality of rice (the staple food) sells at 8 seers a rupee. The climate may be said to be pretty fair.

ONLY A LITTLE AT A TIME.

THERE are sound objections to one's knowing too much about his own body. I am going to tell you what they are; not to-day, but soon. To make sure of them you will have to watch these articles sharply in the newspapers. Yet we should know a little; and a fraction of that little I will serve up now. Please favour me with your attention.

Right across the middle of the body is a large, thin, flat muscle, stretched like a canvas awning—the diaphragm. By it you are divided into two large storeys or compartments. The upper one contains the heart and lungs, the lower one contains (chiefly) the stomach, the intestines, and the liver. The most painful (internal) diseases occur downstairs, the least painful upstairs.

The entire right side of the lower compartment, from the top down to the short ribs, is filled by the liver which is suspended to a mere point of the diaphragm and shakes about with every movement you make.

Now, from the location of the liver we have a word used for ages to express one of the most unhappy conditions a human being can fall into—the word *hypochondria* (often abbreviated to "*hpo*"), the word meaning *under the cartilages*.

"For seven years," writes a correspondent, "I suffered from complaint of the liver. I was very bilious, my skin was sallow and dry, and the whites of my eyes yellow. I had much pain and weight at my right side, and was constantly depressed and melancholy. It seemed to be out of my power to take a hopeful or cheerful view of anything. The effect of this complaint on the mind was one of the aspects of it hardest to bear."

"I had lost my natural appetite, and ate to support life; but there was no more any genuine relish for food or drink. The bad taste in my mouth made all that I took taste bad. Sometimes I would be taken sick and throw up all I had eaten; and after a meal, no matter how slender and simple, I was troubled with fulness and pain at the chest. I used many kinds of medicines and while some of them may have relieved me for the moment, none conferred any lasting benefit, and I was soon as bad as ever."

"In March, 1892, I read in a small book of what Mother Seigel's Curative Syrup had done in cases similar to mine, and was especially interested in the account given in the book of the nature and duties of the liver, and its disorders. I got a bottle of the Syrup from Boots' Drug Stores, and after taking it a few days felt quite like a new man. It seemed to correct my stomach and liver and clear my system of all bile; and it left me in capital health. Since that time I have kept Mother Seigel's Syrup in the house as a family medicine and have commended it to all my friends as the best known cure for ailments like the one from which I suffered so miserably and so long. You can use this statement as you like. (Signed) John Gent, 59, Coventry Road, Bulwell, Nottingham, March 21st, 1895."

"In the spring of 1891," writes another, "I found myself in bad health. I had no appetite, and the little I did eat did me no good, gave me no strength. I had great pain and weight at the chest and right side, and my skin turned sallow and dry. My kidneys also acted badly, and from time to time I had attacks of gravel; and cold, clammy, weakening sweats broke out all over me. Being only seventeen years old when the trouble began I was greatly alarmed and anxious. No doctor was able to help me, and I continued thus for over three years. In June, 1894, I began to use Mother Seigel's Syrup and soon felt better, lighter, and more cheerful. And by taking it a few weeks longer I recovered my health and strength. Since then, when I have any stomach, liver, or kidney symptoms I resort to Mother Seigel's Syrup and it never fails to set me right. You can publish this letter. (Signed) C. Hanson, 6, New Inn Lane, Gloucester, May 31st, 1895."

The stomach, the liver, and the kidneys are all connected parts of the food and digestive system. When disordered (usually through torpidity of the stomach) they cripple the body and throw a gloom as of night over the mind. On the earliest signs of anything wrong with them use Mother Seigel's Syrup at once.

Sir George Chesney Memorial Committee.

CHAIRMAN:

General Sir Henry W. Norman.

MEMBERS:

The Marquess of Lansdowne, Field Marshal Lord Roberts, Mr. George Allen, Colonel Sir J. Ardagh, Sir Stuart Bayley, Mr. William Blackwood, Sir Edward Braddon, Rev. A. G. Butler, Colonel Sir G. S. Clarke, General Sir E. Collett, Sir Auckland Colvin, Sir J. Inland Danvers, General C. H. Dickens, Sir Mortimer Durand, General Sir W. Sutherland Hamilton, Captain Hext, R. N., Mr. A. P. Howell, Sir W. W. Hunter, Lieut.-Genl. McLeod Innes, General Sir Allen Johnson, Sir H. S. King, M. P., Mr. A. Lawrence, General Sir R. Low, Sir Alfred Lyall, General Sir O. Newmarch, Sir Andrew Scobie, Field Marshal Sir Lintorn Simmons, Field Marshal Sir Donald Stewart, General R. Strachey, General Sir A. T. Taylor, Mr. Meredith Townsend, Mr. W. C. Unwin, General Sir George White and General Sir E. Williams.

Memorial

TO THE LATE

SIR GEORGE CHESNEY, K.C.B., R.E., M.P.

A Meeting was held, on the 24th April, at the Royal United Service Institution, of some of the friends of the late Sir George Chesney, to consider the question of the commemoration of his distinguished services as Soldier, Administrator, Statesman, and Author. General Sir Henry Norman presided, and was supported by Field Marshals Sir Lintorn Simmons and Sir Donald Stewart, and other friends of Sir George Chesney. To carry out the object of the Meeting, a General Committee was formed, which included the gentlemen then present, and in addition, the Marquess of Lansdowne, Field Marshal Lord Roberts, General Sir George White, Sir Andrew Scobie, Sir Alfred Lyall, Sir H. S. King, Sir W. W. Hunter, Mr. Meredith Townsend, General Richard Strachey, Mr. William Blackwood, and others.

The form the Memorial should take was left for the future consideration of the Committee, as it would depend on the amount subscribed, but the suggestions tended towards a bust of Sir George for the India Office, and a medal for valuable contributions to Military Literature. It was resolved to limit each subscription to a maximum of three guineas.

Subscriptions will be received by Lieutenant-General McLeod Innes, 9, Lexham Gardens, Cromwell Road, London, W.

COMMITTEE FOR INDIA:

His Excy. General Sir George White, V. C., G. C. I. E., K. C. B., the Hon'ble Major-General Sir E. Collett, K. C. I. E., Lieutenant-General Sir W. S. A. Lockhart, K. C. B., K. C. S. I., His Excy. Lieutenant-General Sir C. Mansfield Clarke, K. C. B., Major-General J. Duncan, Major-General G. E. L. S. Sanford, C. B., C. S. I., Major-General G. de C. Morton, C. B., Major-General A. R. Bullock, C. B., C. S. I., Brigadier-General W. G. Nicholson, C. B., Captain J. Hext, C. I. E., R. N., Colonel W. S. S. Bisset, C. I. E., R. E., Colonel T. Deane.

Honorary Secretary:
Colonel T. Deane,
Simla.

Subscriptions will be received, in India, by Messrs. King, King & Co., Bombay; Messrs. King, Hamilton & Co., Calcutta; and by the Alliance Bank, Simla, and its branches at Calcutta, Cawnpore, Agra, Ajmere, Dujeeing, Lahore, Murree, Mussoorie, Rawal Pindi and Umballa. Subscriptions are limited to a maximum of Rs. 32 in India.

By order of the Committee,
T. Deane, Col.,
Hony. Secy.

Simla, 18th July, 1896.

POSTSCRIPT.

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Uckoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Babington Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, K.C.I.E., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindu Patriot*, in its palmiest days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his life and letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unimpaired by ostentation and earnestness unspoiled by harshness.—*The Muhammadan*, (Madras) Oct. 5, 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unfailing instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, potent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Hospital Railway, from Ceylon says:—It keeps splendid time and never stopped although it sustained hard knocks and jerks. x Dr. H. Moore of Royal Artillery from Poonamallee says:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dumbarton says:—I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—One watch you sent me some seven years ago is still keeping very good time.

Jewelled Ring Rs. 1-8-0. Real

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada. *Scientific American*.

VOL. XV.

CALCUTTA, SATURDAY, OCTOBER 3, 1896.

WHOLE NO. 745.

PINDAR'S HYMN TO PERSEPHONE.

"Persephone appeared to him in a dream, and complained that she alone of all the gods had had no hymn made by him in her honour ; but added that he should yet praise her in the land of the dead. Ten days after this the poet died at Argos. Immediately after, his spectre appeared to an aged dame at Thebes, and recited a new hymn to Persephone ; some portion of which she was able to commit to writing." —See 'Life of Pindar' in "Ancient Classics for English Readers."

I.

It was the day that tuneful Pindar sent
To banquet with Apollo ; * I, who knew
Him far from Thebes, sat pondering the intent
Of that strange vision, which, revealed to few,
He trusted to my long-tried faithful breast
Ere unto Argos he his steps addressed.

2.

For ten days gone ('twas thus he told the tale)
There stood revealed his midnight couch beside
A form majestic, lifting her black veil :
At once he knew her for King Hades' bride,
Awful, yea terrible, yet fair to see,
With eyes that lit the gloom, Persephone.

3.

Upon the moonlight splendour of those eyes
His own, he said, fixed unaverted gaze,
The while he heard these words : "Thy melodies
Resound, O Pindarus ! each high god's praise ;
Each goddess' might and beauty make they known
Save one ; —they leave unhymned my praise alone.

4.

Why, Phœbus' nursling ! why, thus wrong my fame ?
Why weave no garland of fair song for me ?
Is this well done to slight my holy name ?
But yet thou, too, shalt praise Persephone,
Not here, near waters bright by Dircæ fed,—
By darker waves, in kingdom of the dead."

5.

I mused on this : night came, and with it stood
Pindar by me, changed since I saw him last ;
All signs of age were gone, his altered mood
Showed solemn joy, as one who had o'erpassed
The boundaries of our life, and all things seen
As gods behold them in their light serene.

6.

He held the lyre no more ; but full, rich song
Flowed from his lips like stream that swells in might ;

* "Pindar to supper with the god," was proclaimed by the sacristan at Delphi, each night, before he closed the temple door.

He praised Persephone, the fair, the strong,
The gentle,—then he vanished from my sight.
With me some fragments of that song remain,—
Take them, poor echoes of a lofty strain !

THE HYMN.

1st Strophe.

Hail ! thou whose crown,
Not made of gold, gleams bright when gold is dimmed,
Not twined of roses, blooms when roses die,
Persephone ! by me till now unhymned ;
Till now,—but now mine eye
Hath seen thee, and I praise thee. Thou far down
Wast carried, under Enna's plain,
In wider realms to rise again,
And share his throne whose awful frown
Shakes all that live with dread,
Whose smile sheds sunlight on the righteous dead.

1st Antistrophe.

Spouse of a king
Who rules his subjects with such gentle sway
That none from out of all that myriad band
Has ever sought his laws to disobey,
Or to escape his hand, *
Thou canst not mourn for thy long-vanished spring,
Or pant to share the hollow mirth,
Or see the fitful lights of earth,
Now that a steadier radiance fling
Round thee, with splendour pure,
The rays no night can quench nor mist obscure.

2d Strophe.

Hail ! awful queen !
Thou, who the earthen vessel shatterest,
Giving to sight
The gem within, till now unseen !
Thou, who dost wave thy wand and scatterest
The phantom host,
That eager troop around
The seekers after light !
Thou bringer-forth to view of treasures lost ;
By whose pure hands the coils that Life has bound
In tangled maze, are straight unwound !

* See Socrates in Plato's Dialogues.

DEAFNESS COMPLETELY CURED ! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

2d Antistrophe.

Hail ! gracious one !
 Who liftest up from earth, safe carrying,
 Mighty and kind,
 The traveller whose long march is done ;
 Who longed for thy white feet, far tarrying
 On distant hill,
 As heavier grew his load
 As fiercer blew the wind :
 Once on thy bosom, he forgets all ill ;
 Borne in thine arms, o'er ocean's trackless road,
 To island, of the blessed abode.

3d Strophe.

Hail ! Lady of fair flowers,
 More lasting than on earth that grow ;
 For these with morning blow,
 Ope wide at noon, and droop at even-tide :
 But those that deck thy bowers
 Bloom on, a fadeless glory and a pride.
 No worm is at their root,
 And, when they turn to fruit,
 It keeps the promise of its birth.
 Nay more, within thy garner safe abide
 The sheaves we toiled to raise, but might not bind on earth.

3d Antistrophe.

Hail ! thou who dost unite
 The severed once by change, or death !
 Where turf, thy trees beneath,
 Spreads green and smooth in many an open glade,
 Friend after friend to sight
 Steps forth, and greets us from the holy shade.
 No whisper breathe they sad,—
 Their brows are clear and glad.
 There Orpheus meets Eurydice,
 Antigone her brethren ; nor afraid
 Is now the Theban king to bless his children three.

4th Strophe.

Hail ! Cleanser, hail !
 Whose holy touch removes the stain,
 The blot from sire to children cleaving,
 Which men have washed, and washed, in vain.
 " To-morrow 'twill be gone," Hope cries, deceiving ;
 Yet prayer and effort fail.
 But thou hast lustral waters, far
 More cleansing than in temples are ;
 Their dew makes pure at once ; and, clean again,
 Within thy halls we stand, for gladness scarce believing.

4th Antistrophe.

Hail ! Giver great
 To man of his desire, long sought,
 But unaccomplished ! Thou, his wish fulfilling,
 Dost give him what he grasped by thought
 Awhile, but vainly : disappointment chilling
 Still followed soon or late.
 Earth's gifts to shadows turns thy hand :
 Earth's dreams it bids substantial stand
 Around us, into life from shadows brought ;—
 Our heart's deep thirst with love, our mind's with wisdom stilling.

Epode.

Hail ! dealer of true praise !
 With thee the tinsel fades, the diamond glows
 Hail ! Mighty Teacher, hail ! Thou dost disclose
 The secret hid from man for many days ;
 Thy Hand unseals his eyelids, and he knows
 The God he sought in vain on earth by winding ways.

E. J. H.

Blackwood's Edinburgh Magazine.

WEEKLYANA.

DURING his autumn tour, commencing on November 2, the Viceroy will travel by broad gauge railway from Kalka to Delhi, by narrow gauge from Delhi to Ahmedabad, by broad gauge again to Rutlam, then by narrow to Ujjain, broad gauge once more from Ujjain to Calcutta, where he will arrive at 9-15, A.M., Calcutta time, on Thursday, the 10th December.

The Levée has been announced for Thursday, the 17th December, at 9-30 P.M., and the Drawing Room for Saturday, the 19th December, at the same cold hour of winter night. Will any arrangement be made to protect gentlemen of the public entrée from exposure on the grand staircase to chill midnight air? The latest day for sending in cards for the Levée is Saturday, the 5th December. The notification says that "gentlemen who propose to present others must send in *in writing* for approval the names of such gentlemen to the Aid-de-Camp in Waiting, not later than Saturday, the 5th December, when, if they are approved, presentation cards will be forwarded." This is as it ought to be. Persons have been seen to pass through Government House, who, though proposed to be presented, had not been accepted. We hope special care will be taken to examine new presentations, if it is too late to clear the existing list of objectionable names. It has been ruled recently that "gentlemen who present others must themselves attend the Levée." This rule is not always observed and no attempt seems to have been made to enforce it. We will again observe that, after a Levée, an official list ought to be published for general information. The newspaper publication, though demi-official, is not accurate and cannot be authoritative.

THE *Gazette of India*, of September 26, publishes Draft Cantonment Rules, 1897, in supersession of rules and regulations made under Act XXII of 1864 (an Act to make provision for the administration of military cantonments), Madras Act IV of 1865 (an Act to make provision for the administration of military cantonments in the Presidency of Fort St. George), Madras Act I. of 1866 (an Act to repeal Madras Act No. IV of 1865, and to make provision for the administration of military cantonments in the Presidency of Fort St. George), and the Bombay Cantonment Act of 1867 ; all rules made under the Cantonments Act, 1880 ; and the Notifications of the Government of India in the Military Department No. 460, dated the 3rd May, 1895, and No. 597, dated the 22nd May, 1896. They are necessarily stringent. But we are glad to find a provision against groundless prosecution. "In any case in which a Magistrate is satisfied that the Cantonment Authority had no reasonable ground for instituting a prosecution under these Rules, he may direct the Cantonment Authority to pay to the accused such compensation, not exceeding fifty rupees, as he may think fit, and the sum so awarded shall be recoverable as if it were a fine." There is also a direction about payment of compensation. "The Cantonment Authority, in any case not otherwise provided for, may make compensation out of the Cantonment Fund to any person sustaining any damage by reason of the exercise of any of the powers vested in the Cantonment Authority, its officers and servants, by these Rules, and shall make such compensation if the person sustaining the damage was not himself in default in the matter in respect of which the power was exercised."

JOSEPH PARKER, Esquire, late Director-General of Stores, India Office, London, has been made a Companion of the Most Exalted Order of the Star of India.

ROBERT BRITTON, 39 years of age, a belt maker, Glasgow, was sentenced to 3 months' imprisonment for having neglected his seven children, of the ages of from 2½ years to 12 years, by failing to provide them with food and clothing and proper accommodation. The officer of the Society for the Prevention of Cruelty to Children reported that the children were naked, the only food in the house was plain bread, and for eleven members forming the family there were only two beds with a single cover. In June 1893, Britton was sentenced to 30 days' imprisonment for similar neglect.

Unless it were an offence to have children when one has not the means of feeding and clothing them, Britton suffers for marrying and multiplying. His imprisonment means additional neglect of the children. A more humane course for the Society would have been to

find provision for them, than send their father and bread-winner to jail.

IN 1893, Germany headed the list of beer-producing countries, with 1,202,132,074 gallons. Great Britain was second with 1,164,752,952 gallons of malt liquor. Next came America with 1,084,433,460 gallons, followed by Austria with 385,256,168 gallons; Belgium with 209,856,174; France with 196,630,500 gallons; Russia with 93,639,892 gallons. Denmark brewed 45,000,000 gallons; Holland 33,000,000; Sweden 28 and a third million; Switzerland 26 and a sixth million gallons. Other countries for which statistics are available produced less than 20,000,000 gallons each. The total output of malt liquors in Europe and America was 4,500,000,000 gallons, produced from 7,270,000 tons of malt and 82,000 tons of hops.

..

THE "Scientific American" of June 5, 1847, wrote:—

"A Belgian savant says he has just discovered that electric light directed on the human body makes it so diaphanous as to enable the arteries, veins and nerves to be seen at work, and their action to be studied."

It is not said what was the peculiar kind of apparatus used, for Crooke's tubes had not then been discovered.

DURING experiments to discover a means of preventing loss of life among miners, from underground explosions, Dr. John Haldane, lecturer on physiology, Oxford University, actually inhaled carbon monoxide for seventy-one minutes, with the result that vital energy was nearly extinguished. Life would have been extinct had not oxygen been specially administered.

Such devotion to science deserves more than ordinary recognition.

FOR extra labour in reporting the official debates, in addition to the ordinary daily reports for the paper, the parliamentary staff of the *Times* have been presented with a bonus of £50 each.

..

THE *Effective Advertiser*, the journal of Printers, Stationers and kindred Traders, reports that the electric arc lamps at the offices of the *Manchester Guardian* being "found to be very injurious to the eyes," "by an ingenious arrangement the whole of the light is projected on to the ceiling from whence it is diffused, the result being a beautiful daylight effect which is at once pleasant to the eyes and altogether satisfactory."

..

THE Madras papers record the death, in Black Town, of a Eurasian, named L. D'alvez, carrying on the business, on the Broadway, of Jewellers and Watchmakers, at the age of 93 years.

..

THE editors, both Mahomedans, of two vernacular papers published in Triplicane, Madras, went to court charging each other with defamation. They, however, made up their differences out of court. The magistrate has recorded the following order:—

"The case coming on for hearing this day, both parties expressed their regret that they have hastily said things about each other in their respective papers, which they are sorry for, and they aver the matter complained of by each was written without malice in the heat of controversy. Having thus expressed their regret to each other in Court, they pray their cases may be withdrawn. The Court is of opinion the parties have acted sensibly and amicably in making such request, and permits the case to be withdrawn."

NOTES & LEADERETTES, OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

—

THE number of Armenians killed at Eguin by the Kurds on the 15th and 16th September is given at upwards of one thousand. It is also reported that one hundred Armenians have been killed at Divrig in the same district. The Russian fleet is cruising off the mouth of the Bosphorus. Considerable uneasiness continues to be felt at Constantinople, and many Musalmans are sending away their families. The Sultan has sent an autograph letter to the Emperor William. The French papers state that Monsieur Cambon, the French Ambassador at Constantinople, in an interview with the Sultan warned His

Majesty of the armed intervention of Europe if the recent troubles were renewed. This would mean that if it did not end the Ottoman Empire at least it would put an end to the present dynasty. Monsieur Cambon added that the European entente is perfect.

THE Foreign press generally disapprove Mr. Gladstone's Liverpool speech, and regard his proposals as impracticable.

THE Sultan, in reply to an address from the Armenians, has granted them permission to elect a new patriarch.

SIRDAR Sir Herbert Kitchener has been promoted to the rank of Major-General. The North Stafford Regiment is returning to Koshah en route to Cairo. A complete panic has seized the Dervishes, and they are utterly disorganised and retreating on Omdurman. The Second Brigade under Major Macdonald has started southwards to garrison Eldebbah, Merawi and Khandak. No advance on the part of the Nile Expedition beyond Dongola is contemplated this year, the state of the Egyptian finances rendering it impossible. British and Egyptian officers will administer the whole province of Dongola, and organise a police force. An Egyptian brigade will remain at Korti and Debbeh, which will be permanently garrisoned, and armed steamers will patrol the river. Colonel Rundle will probably be appointed Commandant at Dongola. No British troops will remain at the front with the exception of machine gunners and engineers. A railway will be completed to Kubar, whence stern wheel steamers will ply to the open water.

THE Japanese papers deny the statement of the *Times* that Russia and Japan have agreed to a joint protectorate over Corea.

LI HUNG CHANG arrived at Yokohama, where he had no reception. He has proceeded to Tientsin.

THE *Times* Cairo correspondent states that it is reported that the Khedive, during his recent tour in Europe, saw M. Hanotaux in Paris, and conferred with him relative to a scheme for Egyptian Autonomy, which had been drafted by the Native officials. The *Times* discredits the report, but says that if it is true, the Khedive would enter on a course fraught with humiliation, and not improbably loss and danger to himself.

The statement that the Khedive had stayed a short time in Paris is true, but there is no truth in the statement that he saw M. Hanotaux or any other French Minister. His Highness left Paris as soon as his presence there became known.

THE *St. Petersburg Bourse Gazette* and the *Novosti* favour a political understanding between Great Britain and Russia.

A BANQUET was given at Cambridge to Ranjitsinghji to celebrate his achieving the highest recorded average at cricket. The guests, who numbered 280, included the leading University cricketers. A letter was read from Mr. Bannaghi expressing regret at being unable to attend, and adding that the banquet would prove that the people of India had English friends, who were ready to recognise the worth of a British subject regardless of colour and creed. Sir John Gorst remarked that Ranjitsinghji had done much to promote good feeling between the two peoples. Prince Ranjitsinghji referred to the value of the cordial relations between England and India which, he trusted, would always present a united front to a common enemy.

Punch has drawn Ranjitsinghji with upraised bat, and "An ode to the Black Prince—a Western dithyrambic in Eastern style" ends as follows:—

"When we want someone brilliant and steady, hawk-eyed, lion-hearted and cool,

A blend of Maclaren and Grace with the 'stick' of the Shrewsbury school;

The sparkle of Stoddart or Wynyard, the patience of Surrey's brave Bob,

May Ranjit, the Black Prince of cricket, be with us, and 'well on the job!'

ADVICES from Tamatave report that the Tahavalos rebels have surrounded Antananarivo.

ANOTHER gold quartz vein, three hundred yards long, and thirty-three feet wide, depth unknown, has been discovered at Cape Bojie in Newfoundland. The whole region is intersected with reefs.

LATEST advices from Mishonaland state that Alderson's column have completely routed the rebels in the Mizoe district, and quelled the rising there.

FRANCE and Italy have concluded a settlement of their differences regarding Tunis. This removes a grave cause of discord between the two countries.

A FEARFUL hurricane has taken place on the Atlantic coast of America, especially in Georgia and Florida. A hundred people were killed and immense damage done.

THE autumn political campaign has opened with speeches from Mr. Asquith and Mr. Bryce, both urging the deposition of the Sultan. They believe that the beneficial action of Great Britain is possible without imperilling the European peace. The *Daily Mail* says that the Powers are agreed on a pacific settlement of the Eastern Question.

A DAY of humiliation and prayer has been proclaimed at the Cape in view of the ravages of rinderpest in the Colony.

THREE cargoes of Californian wheat were yesterday sold for shipment to India, an event hitherto unknown.

A MALIGNANT fever has broken out among the Merve Turkomans, and 10,000, mostly children, have perished.

THE Royal Commission on the Administration of the Expenditure of India has adjourned and is expected to reassemble in January next. Before adjourning, it resolved, "That without prejudice to the reception of pertinent evidence of Native or other independent witnesses, the Commission is willing to accept the suggestion of the Indian Government that the Bombay (Presidency) Association should be asked to nominate a witness." The Bombay Association, as that of the first city in India, is shewing commendable activity in the present business. Other cities and Associations seem occupied with more immediate politics of their own.

SIR Antony MacDonnell has not been deaf to the complaints of Lala Hurjimal, banker and contractor of Peshawar, regarding the management of railway authorities at Hurdwar. The N.-W. P. Government has communicated with the manager, Oudh and Rohilkhand Railway, and the Lala's representation is under consideration.

WE make the following extract from a private letter dated Allahabad, the 29th September:

"There has been no rain here for the last month and a half and the heat is so excessive that it is difficult to get out after 9 A.M. The prices of grain are rising continually. Wheat is selling at about 8 seers per rupee and rice at Rs. 6 per maund. Imagine what must be the state of the poor, hundreds of whom are coming every now and then into the town from adjacent villages. The inrush of half-famished villagers into the town is creating an alarm in the minds of the well-to-do, specially the grain-dealers, who are apprehensive of being looted. In every crowd, however small, they see rioters.

Two or three days ago, a rumour reached this town that the grain market of Cawnpore had been looted. This created a great sensation and many feared a similar occurrence here. The rumour originated in a *halwai* shop which was actually looted and not the grain market. If all these do not mean famine, I do not know what that is. Happily, there is no sickness in these parts.

The Lieutenant-Governor has not yet come down from Naini-Tal, but is he expected soon. His recent principal act has been the

prosecution of two sub-judges. I understand a number of subordinate officers in some of the district courts will be prosecuted for corruption."

GRAIN riots are reported from the Central Provinces. At Nagpur, grain valued at half a lakh was looted. The military had to be called out to suppress the rioters, two of whom were killed and fifty wounded.

PROFESSOR A. Vambéry writes to the author of "Hindu Castes and Sects" under date Budapest University, September 8:—

"Pray accept my best thanks for your most valuable book on Hindu Castes and Sects which you were so kind to send me. I must confess that my knowledge in this matter was very limited and defective and the cursory reading of your work has given me already a large amount of information which I could not collect anywhere else.

From your definition of Religion, I see that you have got liberal views rarely to be met with in Asia and in Europe, and I congratulate you upon it. I fully share your views, and I am only sorry that there are but very few scholars who have the courage of their opinion.

With best thanks and my respectful compliments."

THE City Theatre, under the guidance of Bahoo Naba Coomar Raha, late of the Royal Bengal, hopes to make a better record. Recently, the management did a good act, for which it deserves the sympathy of the generous. It gave a benefit night to a struggling Pandit, who, encouraged from high quarters and promised regular support by a Maharaja, opened a *tal* at Bhownanipore and went into expense, to find himself thrown overboard by the Raja. The Pandit, true to his word, has named the school after the Raja, but the Raja, having obtained another lift in the new peerage, considers himself freed from his obligation. We are reminded of a clever dedication in a Bengali book. It was understood that the author would dedicate his book to a Bengali minister of a Native State, who would pay the costs of printing. The book was ready but the costs were not forthcoming. Notwithstanding, the writer himself paid the expenses and also dedicated the book to the minister reminding him of his broken promise. It seems the word of the great need not be kept. That breach, instead of proving a drag, helps their greatness.

THE defamation charges in the Police Court against the *Dainik* have been withdrawn. The defendants having expressed regret in due form, the apology has been accepted. It is in these words:

"We beg to express our sincere regret for the utterly false, malicious and outrageous libel, we were led to publish in our issue of the *Dainik* of the 13th *Shrabun* last regarding the complainants and their wives. We have already published an apology in our issue of the 15th *Bhadra* last, and we regret that we were wholly ignorant of the nature of the libel contained in the poem until our attention was called to it after publication. There is no doubt that it is the work of some cowardly and malicious person seeking to injure the complainants and their wives. We are sorry that we are unable to produce the manuscript of the libellous poem, not having preserved it. We have asked for forgiveness from the complainants and their wives, and we are thankful to them for having accepted our apology."

ON the 25th September, the Bengal Chamber of Commerce addressed the following letter to the Bengal Government:—

"The Committee of the Chamber of Commerce desire me to refer you to paragraph 3 of my letter No. 851-95, dated 19th July 1895, a copy of which is enclosed for easy reference, and to say that they have noticed with extreme concern the announcement in the public papers of the appearance of the Bubonic plague at Bombay. The Committee need not remind Government of the fatal character of this plague, nor of the ravages it has caused wherever it has made its appearance. Calcutta is closely connected with the Ports of the Indo-Chinese Peninsula as well as with the China ports, and the Committee consider that the time has now come to appeal to Government to take precautions to prevent the importation of this plague. An outbreak of such a plague must, in the opinion of the Committee, be a misfortune beyond the power or capacity of the Municipal Corporation to deal with, and they would therefore urge upon Government the advisability of taking steps to guard Calcutta against the importation of the disease, and also the advisability of precautions to meet it should it make its appearance."

A telegram from Simla, dated the 2nd October says:

"The plague in Bombay has been officially declared as genuine bubonic plague, though not of the severest nature. It is believed here that quarantine will be declared against Bombay, and that the mails will in future go via Karachi."

In reply to the Lieutenant-Governor of Bengal, the Governor of Bombay telegraphed on the 30th September:

"Forty-four deaths last four days. If disease is plague, then of mild modified type, and no tendency to increase at present. Our sanitary

measures so far successful. All requisite steps being taken day by day."

The same day, the Bengal Government addressed the following letter from Darjeeling to the Chairman of the Calcutta Corporation :

"I am directed to acknowledge receipt of your letters noted on the margin (Nos. 4042 and 4046 dated respectively the 25th and 26th September 1896) regarding the reported outbreak of plague in Bombay, and in reply to forward, for the information of the Commissioners, copies of a telegram despatched by this Government to the Government of Bombay, and of the replies thereto. The telegram of to-day's date from His Excellency the Governor shows that the character of the disease is still open to question ; that active measures are being taken by the Bombay Government to deal with it ; and that all unnecessary panic or excitement regarding it is much to be deprecated. At the same time it is obviously desirable to take every reasonable precaution to prevent any outbreak of the disease in Calcutta, and to detect at the earliest possible moment any cases that may occur. Under the provisions of section 37 (5) (A) of Bengal Act II of 1888, the preventing or checking the spread of dangerous disease is one of the obligatory duties of the Municipality, and sections 321 to 334 of the Act contain the detailed provisions of law on the subject. The Lieutenant-Governor will be quite ready to sanction any measures which the Commissioners may desire to initiate under those sections. To begin with, it appears desirable to declare that bubonic plague or any form of typhus fever with glandular swellings is a dangerous disease, regarding any case of which information shall at once be communicated to the Commissioners or their Health Officer under section 321.

2. The next step is for the Commissioners to select a site for a temporary Plague Hospital away from the main thoroughfares, and to arrange for its prompt erection should the need arise. The Hospital should be built of matting and T-iron or bamboos in blocks to contain 10 patients each. Provisional contracts could no doubt be arranged for the rapid construction of such a building if required.

3. I am to say, with reference to a query irregularly addressed by the Health Officer to Government direct, that the Campbell Hospital cannot be used for the purposes of a Plague Hospital.

4. The Commissioners should, if the disease breaks out, have special carts (drawn by bullocks and specially marked) provided, one at each police-station, for the conveyance of cases to Hospital. Provision for disinfecting both carts and drivers in the vicinity of the Hospital after each journey would be necessary.

5. If the disease appears, the Town will have to be divided into Sanitary Circles of manageable size, and a Medical Inspector placed in charge of each, with full powers to carry out the measures that may be ordered by the Commissioners or Government for preventing the spread of the disease. Action under section 334 of the Act will then be necessary, and the Government will be prepared to appoint a Medical Board to assist the Municipality in devising measures to deal with the outbreak.

6. The Lieutenant-Governor trusts, however, that no necessity for such measures will arise. Meantime he entirely approves of the steps that are being taken under the Commissioners' orders to give special attention to the cleansing and sanitation of the town. The Municipality of Howrah will be directed to take similar steps.

7. It is premature at present to propose any interference with, or medical inspection, of railway passengers. Orders on the subject of arrivals by sea will be issued by the Marine Department."

The Bengal Government, it is plain, does not accept the evidence as enough for unusual activity of the Health Department of the Calcutta Corporation. It seems to say that there is more panic than cause for fear, and that such panic may lead to harm.

The Health Officer's "Advice to Householdors for the Prevention of the Plague," among others, is that "All dirt and rubbish should be deposited in the streets in the early morning for removal by the Municipal carts." Householdors have also been warned by beat of drum not to deposit any refuse in the streets after 8 in the morning. What then is to be done with the refuse for full 24 hours? Is it to be preserved in the house for the next round of the conservancy cart? A more insanitary course could not have been devised. The endeavour should be to draw out all dirt and refuse from houses as soon as possible. An unsightly street is better than miasma-generating houses bordering it. The Chairman's notice inviting "information from any person regarding any accumulation of offensive matter on any public street, road, lane, by-lane or surface drain or regarding any man-hole or gully-pit emitting offensive sewer gas or about privies, public or private, not regularly or efficiently served by municipal mehters, or any neglect of the conservancy department," is conceived in a truly sanitary spirit.

THE Bombay Corporation has voted a lakh of rupees for suppressing the plague. The Government of Bombay has appointed a Commission. The Government of India has deputed Mr. Haffkine to investigate the outbreak.

REIS & RAYYET.

Saturday, October 3, 1896.

HOLIDAY TRIPS.

THE general Pooja holidays are nigh. This is the season when many people in Calcutta, whose presence at home is not absolutely necessary, seek a change of scene for recruitment of health or the desire to see new sights. Railway travelling is common enough. River or sea journey is not generally thought of on account of its many inconveniences. A short trip down the river Hooghly only to Uluberia, is pleasant. Messrs. Hoare Miller's steamers leave the Armenian Ghat at 10 A.M., and return by 5 P.M. A short journey up the river is not safe, for the places bordering it are malarious. The East Indian Railway has a direct route to Kalka, at the foot of the Simla hills. It has made certain concessions to holiday tourists. The nearest station to Calcutta, for a change, is Raneegunj, 121 miles distant. It is the head-quarters of the Raneegunj Sub-division of the Burdwan District, with a population of 13,772 souls. Situated on the north bank of the Damoodar, it is a centre of the coal industry of Bengal. The sights are the coal pits, and the pottery works of Messrs. Burn & Co. The coal pits, with strong pillars supporting the immense upper structure as the roof, give one a glimpse of subterranean formation. There one can find roots of trees with entire stalks, still distinguishable by the eye alone though converted into coal. As health-recruiting places, coal stations, however, are to be avoided, for the *debris* being inhaled may remain impacted in the lungs. There is a kind of consumption peculiar to coal-miners known by the name of anthrakosis.

The places ordinarily preferred are Madhupur, Baidyanath Junction, and Deoghar. Madhupur is 183 miles from Calcutta, and Baidyanath 201 miles. Deoghar is four miles north-east of Baidyanath Junction and can be reached by a narrow gauge railway. Madhupur is usually overcrowded during the holidays. It has an abundant food-supply. Baidyanath Junction has few houses and food is procured with difficulty. The nearest *hat*, held twice in a week, is at Rohini, about two miles to the east. It contains ruins of buildings attributed to Raja Madan Pal. Deoghar, or the city of Mahadeva as Baidyanath (lord of physicians), is thickly populated. Many lepers, in hopes of recovery, go to the great deity and are housed in the home specially built for them by Dr. Mahendra Lal Sircar, a mile east of the city. There are other places in the Sonthal Pergannas that are picturesque and healthy, but they are usually avoided for absence of markets. They are Mihijam, Jamtara, Simultala and Nawadi. Kharmatar, where the late Pandit Iswara Chandra Vidyasagar built a bungalow, and used to pass most of his latter days, has lost its reputa-

The Indian Association for the Cultivation of Science.

210, Bow-Bazar Street, Calcutta.
(Session 1896-97.)

Lecture by Dr. D. N. Chatterjee, B.A., M.B., C.M. Thursday, the 8th Inst., at 5-30 P.M. Subject: Vermes.

Admission Fee, Rs. 4 for Physics, and Rs. 4 for Chemistry ; Rs. 6 for both Physics and Chemistry ; Rs. 4 for Physiology ; Rs. 4 for General Biology ; Rs. 6 for complete course of Physiology and Biology. The charge for a single lecture is 4 Annas.

MAHENDRA LAL SIRCAR, M.D.,
Honorary Secretary.

Oct. 3, 1896.

tion for salubrity. Hillocks, though not within easy reach, can be seen from most of these stations. The one near Baidyanath Junction is about eight miles on the north-west. A mile to the north of Deoghar is a hillock called *Nandan Paharh*. Subscriptions were at one time raised to build a sanitarium there, but, like many memorial funds that fatten the friends and admirers taking charge of them, we do not hear anything of the movement now. The Trikut Hills, about 1,300 feet above the level of the sea, are twelve miles to the east of Deoghar. Thence rises the Mayurakhya, which, passing through Moorshedabad, joins the Ganges. On the Deoghar side, a small stream issues from the hills. It has no outlet. The accumulation of water at the foot of the hill makes the place boggy and marshy. This stream can be utilized by the Deoghar Municipality for the supply of water, at a comparatively small cost. Water for drinking purposes is scarce in the town, the difficulty being increased during *Sivaratri* and *Chaitra Sankranti*. Well-water is largely used, for the small streams of Darhwa and Ajaya are at a distance. Wells, however, do not keep pure long, for sufficient care is not taken to keep them uncontaminated by direct use or indirect percolation. Madhupur is the changing station on the way to Giridi, another centre of the coal trade. From the last mentioned place, a route leads to the Pareshnath Hills, 4,230 feet. They are sacred to the Jains. About 2 miles west of Giridi is Pachamba—another health resort.

At Luckeeserai, the railway loop line meets the chord line which runs from Khana Junction, the next station to Burdwan. Some famous places lie on this line. Sahebganj, 219 miles from Calcutta, situated on the right bank of the river Ganges, has a population of 11,299. It has a communication with the Assam Behar Section of the Eastern Bengal Railway. It supplies the Sabai grass for the manufacture of paper. About seven miles above the place, the ruins of the old fort of Taliagarh or Garhi can be seen, which was once on the bank of the river but now is inland. Commanding the only road between Bengal and Behar, it was said to be the "key to Bengal." On the way to Sahebganj is a little tunnel, near Teen Pahar, a changing station for Rajmahal, the seat of the much abused Serajoodowla, with interesting ruins. Bhagalpur is a large commercial town on the right bank of the river Ganges. It is the divisional head-quarters. The Sonthal Perganna civil suits and criminal appeals are heard here. Bhagalpur will always be associated with the good work of Cleveland, the civilizer of the Sonthals, and is noted for a temple to Gopinath (Vishnu as the lord of the Gopis or milk-minds of Brindaban) on a rock in the middle of the river. About three miles from it, there is a Jain temple, a favourite resort of pilgrims. Champanagore, a Buddhist city, is four miles to the west. Jamalpur, the railway head-quarters for locomotive work, has a branch line to Monghyr of historic fame where Mir Cossim made a stand against the British. To retard the progress of the British troops, a bridge was blown up at Dukra Nulla, three miles south of Monghyr, massive pieces of which can still be seen. The Fort occupies a commanding position on a cliff overlooking the river. Within its walls is a lofty mound, on which stood the citadel, of which there are no remains. About a mile and a half to the north, is Kajra, close to the railway line. Near it, in the village of Oorien, is a granite hill, said to be a hermitage once occupied by Buddha and the scene

of a famous conversion. Numerous rock-cut remains are to be found here. Four miles from Monghyr, is a hot-spring—the holy Sita Kundu. Almost all stations on the loop line have lost their reputation as health-recruiting places. From Bukhtiarpur the old Buddhist city of Rajgir (Rajgriha) can be reached by journeying in a *palanquin* for twenty-four miles. The middle halting city of Behar has a Mahomedan shrine and was famous in olden times for its *kabab*. The rock-excavations at Rajgir testify to the merits of ancient architecture. A few springs enhance the beauty of this romantic place.

Patna is 332 miles from Calcutta, on the banks of the Ganges and has a population of 1,200,000. The ancient city dates its origin from the Hindu period when it was known as Pataliputra. During the Mahomedan supremacy it was the seat of one of the Viceroy of the Emperor of Delhi. In Patna, Dr. Waddel has recently discovered a place where Buddha Ghosha devoted himself to meditation. It is now the famous place for opium manufacture. The city has attractions for the Sikhs also—with the temple of Patna Devi and as once the seat of a religious college.

The next station, Bankipore, has nothing of interest, except a large granary erected in 1784 for storage of grain. It is the changing station for Gya and Digha Ghat railway branches. On the way to Gya, Poonpoo stands on the river of the same name sacred to the Hindus. Gya contains a population of 80,308. It is a city of particular sanctity to the Hindus, with the temple of Vishnu-pada-padma. A few miles from the city is Buddha-Gya, where Buddha Ghosha practised penances. There has recently been a fight between the Hindus and the Buddhists represented by Dharmapala acting under the auspices of Sir Edwin Arnold and Colonel Olcott, for control of the ancient temple. The criminal courts were sought to be utilised by the latter for the purpose. But the high Court has knocked the attempt on the head. Dinapore is more healthy than Patna or Bankipore. The cantonments situated $3\frac{1}{2}$ miles from the station contain many houses. In all the leading cities of Behar, food of various kinds is available. Koelwar, on the Soane, was once a good health resort, but it has lost its reputation. The East Indian Railway bridge on the Soane is a splendid construction. It is 4,726 feet in length and consisting of 28 spans of 150 feet, built upon 3 wells, of 18 feet outside diameter. The piers are sunk 32 feet below water level, the height from low water to underside of girders being 35 feet. The girders are of lattice type, and bear a double line of railway on top, with a roadway below between each pair of girders, but the width of this roadway is not sufficient to permit of its being used for cart traffic. The cost of this bridge was Rs. 43,33,324, or Rs. 917 per lineal foot. It was opened on the 22nd December, 1862.

The next station of importance is Arah. There are works to supply the city with water from the Soane, the achievement of the indefatigable Mr. Skrine, at present Commissioner, Chittagong Division. The chief place of interest is the "Arah House," where, in 1857, a handful of the residents, chiefly Europeans, were besieged by the mutineers under Koer Sing.

From Arah, by canal, Deheri (330 feet high) is reached. It is a fine place for change of air. Situated on the Soane, it commands a view of the

Kymore range. On the opposite bank is Baroon. Both the cities are mentioned by Hooker in his "Himalayan Travels." The Soane has been identified with the Eranboas of the Greeks. The name was probably derived from the Sanskrit Hiranya Vahu. On the Kymore range is the fortress of Rotas (Rohitāswa) named after the son of Raja Harish Chandra and Savyā, famous for the severe trials they underwent at the command of the sage Viswamitra. It is 1,490 feet above the level of the sea. At its foot is the celebrated Dunwah pass. The palace is now in ruins.

Moghul Serai is 469 miles from Calcutta. Here the O. and R. joins the E. I. Railway to run to Benares, Ajodhya, Lucknow, Aligarh and other stations of importance. Benares is six miles from Moghul Serai. The Ganges is crossed at Rajghat by the Dufferin Bridge. The holy city contains many temples, the principal among them being that of Mahadeva as Bisheswara (the lord of the universe), the top of it being covered with a plate of gold contributed by the late Maharaja Ranjeet Sing. Kedarnatha and Anna Purna are also famous. A visit to Durgabati is desirable. It has other attractions. The pillars of Madho Rao, and the Manmandir for astronomical observations are worthy of notice. But the city cannot be recommended as a health resort, though Hindus of both sexes retire there to die. Death there leads to emancipation from rebirth.

Lucknow still retains its many old traditions and attractions. The Kaiser Bag and Chatter Manzil are worthy of contemplation. The British Residency is an object of interest. It was there that Henry Lawrence and the handful of heroes under him withstood a continuous siege by swarming thousands of mutineers. From Lucknow to Aligarh; thence to Meerut. It was here that the first outbreak occurred of the Mutiny. From Meerut to Roorkee, the seat of the Thomason Engineering College. An onward journey thence leads the passenger to Hurdwar, another holy spot whence the Ganges begins its regular downward course. Kankhal has the tradition of being the scene of the great sacrifice of Dakhyā which was destroyed by Siva.

Hurdwar has relics besides imposing sights. It has the ruins of a fortress said to be that of Bena, the son of Prithu. Bena was a vicious King. It was during his reign that the original four castes, by intermixture, produced many new ones. He was slain by the Brahmins. Thus runs the sacred history. The Ganges canal adds to the beauty of the surrounding scenery.

Proceeding from Moghul Serai by the E. I. Railway one comes to Chunar, late a favourite health resort, now not much frequented. Mirzapur on the banks of the Ganges would be crowded by pilgrims before the opening of the Vindhyaçal station. It is the growing favourite. Last year, many tourists visited it. Allahabad, the capital of the North Western Provinces, lies on a *Tribeni*. It was the seat of the Rishi Bharadwaja, the progenitor of the Mookerjee clan of Brahmins. Unlike other towns it covers an extensive area. The Alfred Park opened in honour of the Duke of Edinburgh's visit in 1870 has its attractions. The fort, at some distance from the city, stands at the confluence of the Ganges, the Jumna and the Saraswati. Inside the fort walls is an iron pillar, some thirty feet high, erected by the Buddhist king, Asoka, about 240 B. C. There are other inscriptions bearing on the history of that time. In this fort, under the

branches of the *Akshaya Vat* (deathless banian), Rama is said to have performed the *shrad* of his father, Dasaratha. *Prayag* is specially noted for its Kumbha fair and the Magh Mela. The bridge over the Jumna, at 562 miles, is 3,235 feet in length, consisting of 14 spans of 200 and 3 of 30 feet. The piers and abutments stand over brick wells sunk 42 feet below low water. The height from low water to underside of the girders is 60 feet. The substructure is for a double line, but girders for a single line have been erected. It has rails above and a roadway for cart traffic below. The cost was Rs. 44,46,300 or Rs. 1,374 per lineal foot. It was opened for traffic on the 15th August, 1865. Cawnpur is now a manufacturing town with Woolen Mills, Muir Mills, Elgin Mills, Cawnpur Cotton Mills, Cooper and Allen's Boot and Leather Manufactory, Government Harness Factory, the N. W. P. Tannery and Cawnpur Sugar Works. The chief object of painful interest is the Memorial Well in which it is said the bodies of the massacred were thrown during the mutiny. The Memorial Church and the Massacre Ghat also revive bloody memories of the past. Etawah is 770 miles from Calcutta. In the eleventh century the district was overrun by Mahmud of Ghazni, and in 1186 the city was sacked by Muhammad of Ghor. In 1528 it was annexed by Babar Shah. The objects of interest are the old ruined fort, the Jama-musjid, originally a Buddhist temple, the Athala, a Hindu temple, and the Hume Ganj named after Mr. A. O. Hume (of the Congress), who was Collector of the district during the mutinies.

Agra, on the west bank of the Jumna, was founded by Akbar in 1566. The old capital was on the other bank of the river, now occupied by the station of the E. I. Railway. Babar died here in 1530. East of the cantonments and about a mile below the fort rises that *chef-d'œuvre* of architecture, the world-renowned Taj, with its beautiful downs and gardens, "the charming monument of affection of Mogul taste." It was built by Shahjehan, in 1648, in memory of his wife, Arjamañd Banu Begum, known as Mumtāy-i-Mahal or the exalted of the palace. Built of pure Jaipur marble, the mausoleum stands on a raised platform, at each corner of which is a tall and graceful minaret. Beneath the large dome and within an enclosure of most delicately covered marble fret-work are the richly inlaid tombs of the princess and her husband. The Taj, which was commenced in 1630 and completed in 1658, is described as representing "the most highly elaborated stage of ornamentation, the stage at which the architects end and the jewellers begin. In regard to colour and design, its interior may rank first in the world for purely decorative workmanship." It contains the original mosque designed by Shahjehan in 1654. Outside the fort but now shut in by the railway station, is the Jama Masjid, constructed by the same emperor as a memorial of his pious and highly gifted daughter, Jahanara. The tomb of Intimad-ud-daula, the vizier and father-in-law of Jahangir, is also of remarkable elegance on the east bank of the Jumna, among the ruins of ancient Agra. The fort of Agra had been in possession of Scindia and was taken by Lord Lake in 1806. Fatehpur Sikri consisting of a mass of ruins is about 20 miles from Agra. The Catholic Mission with Orphanage was introduced by the Jesuits in the middle of the sixteenth century. Hathras Road has the ruins of a strong fort held by a Jat Thakur, Daya Ram. In 1817 Major General Marshall besieged and defeated him. The ancient city of Mathura, mentioned by Pto-

lemy as Modoura and by Arian and Pliny as Mathura lies on the right bank of the Jumna. Fa Hian, the Chinese traveller, spoke of it as a centre of the Buddhist faith about 400 A.D. Associated with the doings of Krishna, it is famous throughout Hindusthan. Five miles north of Mathura is Brindaban, famous for its many temples. Among them is that of Govind-deva, erected in 1590, though the real image of Govind-ji is in Jeypur. Gopinath's temple was built in 1580. The village of Gokul on the eastern bank of the Jumna, 7 miles from Mathura, is another holy place. The ancient town of Gobardhan with its tank, Manasi-Ganga, is sacred spot. Mathura was several times devastated by Mahomedan princes. In 1017, the great iconoclast, Mahmud Ghazni, and in 1500 Sekundar Lodi, destroyed many of the esteemed relics. Aligarh has a prominent feature, the centre of the town possessing an old Dor-fortress on which a mosque has been built. It has several times been the battle-field of many rival armies, Marhatta, Jat, Afghan, Rohilla. The fort was held by the Marhattas from 1784, and was subsequently occupied by Scindia for drilling his troops in the European fashion through the aid of the French Generals, De Boigne and Perron. In 1803 it was taken by Lord Lake after a hard and desperate struggle. Its fall gave the British the command of the whole of the Upper Doab as far as the Siwaliks. Recently it has been the scene of the educational adventures of Sir Syed Ahmed.

Delhi, on the west bank of the Jumna, is 954 miles from Calcutta. The old Dillipur, founded by Raja Dillu, about 50 B. C., is 5 miles below the present city. The real ancient city cannot be identified for the many ruins covering an area of 45 square miles, which are the remnants of the transposition by its different rulers, Hindu and Mahomedan. The modern city was built by Shahjehan in 1640 and called Shahjehanabad. The palace on the east of the city, is in the form of a parallelogram 1,600 feet East and West, and 3,200 feet North and South. It has many artistic designs. The splendid tomb of the emperor Humayun is about two miles from the town. The architectural beauties of the Jama Masjid, opposite the fort, the Kutab mosque, ten miles South of the city, and its adjoining Minar, the tallest pillar in India, being 238 feet in height, are well known. The bridge over the Jumna, at mile 953, near Delhi, is 2,640 feet in length. It has 12 spans of 211½ feet. It has the rails above and a roadway below. The piers are built on 10 wells, 10 feet outside diameter sunk 33 feet below low water level. The height from low water level to underside of girders is 23½ feet. The cost was Rs. 16,60,355 or Rs. 629 per lineal foot. It was opened on the 1st January 1867. The town of Delhi has seen many vicissitudes of fortune. In recent years, it was brought into special prominence during the Sepoy revolt. And it was not till the year 1877, that the neglected capital was deemed worthy of the scene of the Imperial Assemblage.

Panipat has the renown of being the place of three great battles. It is a walled town, lying near the old bank of the Jumna. Kurukshetra (Thaneswar) known as the place of the battle between the Kurus and the Pandavas, has a shrine or tank, lying between the Saraswati and the Gharghara.

Karnaul, the city of Karna, a hero of the Mahabharat, has a large fort now occupied by the district school. In 1840, Dost Mahomed Khan, the

Amir of Kabul, was detained here for six months on his way to Calcutta.

The Hill stations in Bengal and the N.-W. Provinces for summer migration are few in number. Nearest to Calcutta is Darjeeling. Its ridges vary in height from 6,500 to 7,500 feet. It was ceded in 1840 by the Raja of Sikim for a nominal sum of £300 per annum. From Darjeeling, Kanchinjanga, (five brothers or five peaks) is visible in a clear sky. Its height is about 21,000 feet. A better view is obtainable from Samdeksu. Towards Nepal, on the north-west, the peaks of Kubra and Junnoo (24,005 and 25,312 feet respectively) rise over the shoulder of Singalelah. In the north, rises Donkia to a height of 23,176 feet. In the south-east the fingered peaks of Tunkola and the cone of Chola (17,320 feet) gradually sink into the Bhutan mountains at Gipmoochi (14,509 feet.) Kinchin is 28,178 and seven others above 22,000. Darjeeling itself presents a magnificent sight. Here, there are no less than 12 peaks, many of which are as high as 20,000 feet and none less than 15,000 feet. The nearest of the perpetual snowy range is Nurshing, a sharp conical peak of 19,139 feet and 32 miles distant. The more distant Donkia is 23,176 feet and 73 miles off. Chamulnari (23,929) on the north-east is 84 miles distant. Sinchal, a place of excursion, has an elevation of 8,000 feet. Kurseong, on the way to Darjeeling, is preferred for its less rigorous climate and less costly living.

Naini Tal (Nayan Tal), a Hindu shrine, 22 miles from Katgudam, of about the same height as Darjeeling, can be reached by the Oudh and Rohilkhand Railway from Barreilly and thence to the foot of the hills. The sight is picturesque with the lake embanked by mountains and guarded by the presiding deity of the place 30 miles up is Almora (7,815), whence one can have, in a clear sky at sunrise, a good view of the nearest peak Nanda Devi (29,749). Ranikhet is 12 miles from Naini Tal. The Pindri glacier is 6 marches from Almora. A little further up Barreilly, is Saharanpore. It has a healthy climate and a botanical garden. From this station Dehra Dun can be reached by *tonga* or *ekka*. Its height is about 8,000 feet. Saharanpore is on the way to Mussoorie and Landour. Mussoorie is 54 miles from the former, and 7 miles from Landour, a higher up city.

Lansdowne (6,000 feet) is situated in Garhwal, about half way between Mussoorie and Naini Tal. It is approached from the Najibabad Station of the Oudh and Rohilkhand Railway.

OUR LONDON LETTER.

September 11.

Great Britain and Ireland. The Royal Commission on the "Financial Relations between Great Britain and Ireland" issued its final report in the shape of a Blue-book on Saturday. From a rough glance at it, one can see a clear line of demarcation between the Separatist and Unionist members. The latter are in a minority of two, but one of them is your late Chancellor of the Exchequer, Sir D. B. Barbour, the other Sir Thomas Sutherland, Chairman of the P. and O. Company. The general conclusions of the majority are:

1. The Act of Union imposed on Ireland a burden she was unable to bear.
2. That the increase of taxation laid upon Ireland between 1853 and 1860 was not justified.

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., in no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 19 SOUTHAMPTON BUILDINGS, HOLBORN, LONDON.

3. That identity of rates of taxation does not necessarily involve equality of burden.

4. That, while the actual tax revenue of Ireland is about one-eleventh of that of Great Britain, the relative taxable capacity of Ireland is not estimated to exceed one-twentieth.

Eleven members started with the assumption that, for the purposes of their enquiry, Great Britain and Ireland must be considered as "separate entities," a proposition stoutly and with conspicuous ability denied absolutely by Sir D. Barbour and Sir T. Sutherland. The Chairman--the O'Connor Don--is a Unionist, but six of them are apparently Gladstonian Separatists of a pronounced character, such as Lords Farrer and Welby and Mr. Gladstone's especial friend--but no friend of India--Mr. Bertram Currie. Three are pronounced Dillonites, and the Parnellites are represented by Mr. J. E. Redmond.

Considering the well-known character of their devotion to Mr. Gladstone, it is something to have their judgment that in the years when he was making his reputation as the "greatest financier of all time" (Gladstonese) the increase of taxation imposed on Ireland in the years between 1853 and 1860 was not justified by the "then existing circumstances." There are many questions of vital interest discussed in the several reports, such as Ireland's liability to bear her share of imperial expenditure on the national debt, the army and navy, but, as the "Times" truly remarks, "none of the innovations proposed by the majority seem to be within the range of practical politics, at all events in our day." The principle advocated by the late Mr. Childers and adopted by the majority of his colleagues, that Ireland should be differently dealt with, because of its population being an "agricultural" one while that of Great Britain is mainly concerned with "manufactures and commerce," involves consequences of a far-reaching character. The counties of England mainly engaged in "agriculture," would claim separate treatment from those in the north principally engaged in "manufactures."

On the question of the "taxable capacity" of the two countries, Sir D. Barbour points out with great force that, assuming in 1893-94 Ireland contributed say 2¼ millions in excess to the imperial expenditure, she received back from Great Britain a sum of 3¼ millions in excess of what she had any right to claim on the ground of taxable capacity." But as the "Times," in a leading article, well says: "The principle of uniform taxation is one of the strongest foundations on which rests the structure of the modern State. It has been in other lands one of the chief instruments in the hands of far-sighted rulers for welding together provinces widely separated by race, by religion, by manners, by traditions, and by economic conditions."

France is in trouble over Madagascar. So far she has failed entirely to establish herself there, as a colonizing and civilizing Power. How far the deposed Queen and her party are answerable for the present lawless state of the island, remains to be proved. But with only 2,000 French troops--a large proportion prostrate with sickness--it is impossible to cope with the revolutionary Hovas.

Spain finds no peace either in Cuba or the Philippines. The condition of the former is really quite hopeless. In the latter, energy and courage may nip the rising spirit of revolt in the bud.

United States. All is mere guess work and will be so until the 3rd of November, when the vote of the electoral college will be declared. Mr. Bryan meanwhile admits that the controversy between the gold and the silver parties, is the most menacing through which the country has passed since the Civil War on the Slavery question.

Prince Ranjitsinghji. There is a very interesting article on this countryman of yours in this month's "Strand Magazine." I quote a single sentence from a letter of the Prince: "I take this opportunity of thanking the British public for the very kind way in which they have always received me on all grounds and that has in no small measure conduced to my success in cricket." He speaks almost with affection of the late Mr. Chester Macnaughten, whose untimely death must be a very serious loss to the Rajkumar College.

Turkey. There is still great unrest at Constantinople, and large numbers of Armenians are being daily shipped off by orders of the Porte. Their destination is unknown, but it is currently believed that vast numbers are simply thrown overboard to provide sustenance for the fish that disport themselves in these waters. Meantime, here at home, the "nonconformist conscience" is advertising itself in the person of D. Rogers of Clapham. He wants what he calls a "Christian" demonstration against the Sultan following the lines of the notorious "Bulgarian Atrocities" agitation of 1874, and poor innocent D. Rogers calls for another Gladstone. But it is always overlooked that at that time Gladstone was in opposition and Lord Beaconsfield Prime Minister. Subsequent to 1874, Mr. Gladstone himself held supreme power for nearly nine years. Will any one point out what he did during these years to drive the "unspeakable Turk bag and baggage out of Europe"? Dr. Rogers and his friends cry "Away with diplomacy. Let Great Britain act single-handed." But they never condescend to tell us how it is to be done.

Mr. Henry Broadhurst, the workingman M. P. and I think Under Secretary of State in the Home Department under Mr. Gladstone and Lord Rosebery, thus expresses himself in a letter that has been published. He is arguing how strong the sympathies of the working classes are with the Armenians, and then adds: "If a British warship were to raze Constantinople to the ground, and hang the Sultan at its yardarm, the commander and his ship would be adored by the British workers." Did you ever read such stuff and nonsense? And remember Mr. Broadhurst is not of the John Burns stamp of workingman. He is a modest, unassuming man, much respected by all parties in the House of Commons. And here we have his judgment on the Eastern Question! The true fact is, the problem is wellnigh insoluble. Constantinople, by nature, is so situated that it can only be attacked by an overwhelming army acting in concert with a powerful Black Sea fleet. Now, there is only one Power in Europe that could produce both combined, the army and the fleet. That Power is Russia, and although her armies could approach through Roumania and Bulgaria, where is her Black Sea fleet? Russia and Britain combined, might do the work, once the army of the former was at Adrianople, and the Mediterranean fleet of the other anchored off Constantinople. But how is our fleet to get there? It cannot enter the Sea of Marmora without the Firman of the Sultan, permitting it to pass the Dardanelles. Dr. Rogers and Mr. Broadhurst may insist that there are no batteries on either shore and no torpedoes ready to explode and hurl our mightiest man-of-war into mid air! Then in "razing" Constantinople, how is Mr. Broadhurst to distinguish between Armenians and Turks? The former would be mown down, as rapidly as the latter. Again, supposing all the Great Powers agreed, and the Turk driven over to Asia Minor, what about the division of the spoil? That does not affect Britain for she desires no territorial increase. But what of Austria and Russia, to say nothing of poor little Greece, which covets Macedonia? Dr. Rogers seems to think the question can be as easily settled, as the preparation of one of his turgid sermons.

Mr. Stuart Glennie has already applied the lash to Dr. Rogers' back. If a demonstration, let it be a "national" one, and not a "Christian" one. Mr. Glennie writes, with great truth, "the Armenians are massacred not as Christians, but as rebels or suspected rebels." And then he concludes with this bitter sting, its very bitterness consisting in its truth, "to make it a specially Christian demonstration would attach to the whole business an unpleasant suspicion of being worked for Nonconformist glorification."

There is a report this morning that the Powers are now seriously considering the deposition of Abdul Hamid. But that is a matter of supreme difficulty in the present posture of affairs. An ugly rumour is also abroad that one explanation of Russia's line of action lies in the fact that she is endeavouring to effect a private commercial treaty with the Porte, one of the conditions of which will be the abrogation of the Treaty of the Dardanelles in her exclusive favour. That, I presume, is an arrangement similar to the Treaty of San Stefano which Russia was eventually compelled by the other Powers to submit to the Congress of Berlin. The free opening of the Dardanelles to vessels of war must come to all the Powers or to none.

Scotch Novelists. The new school of Barrie, Crockett, and Watson (Jan MacLaren) keep themselves always well to the front. The first named is, I am told, a man of true genius, modest and retiring, and his work will live longer than that of the other two. Crockett and Watson are dissenting clergymen, the former belonging to the Free Church of Scotland, the latter to the Presbyterian Church of England. Without in the least disparaging their title as novel writers, their *modus operandi* of puffing and advertising is somewhat amusing. A quasi-religious publisher, let us say in Paternoster Row, starts a quasi-religious weekly newspaper. It is edited by a clergyman, I believe. The publisher gets hold of a writer. Immediately the weekly newspaper writes a book up. The paper circulates among the Nonconformists in England and Scotland, and a good sale is secured in what is called the "religious world." Week after week, the puffing continues. Uninitiated readers, unaware of the connection between the publisher of the book and the owner of the newspaper, naturally fall into the trap, and assume the book must be worth reading, when such a paper has so much to say in its favour. One peculiarity of the paper is a weekly prayer by the editor, himself a defunct Nonconformist clergyman who has found journalistic work more captivating and remunerative than the preparation of two sermons weekly, and the miserable pittance that, as a rule, falls to the unfortunate Nonconformist cleric. The journal in question is a violent Gladstonian paper and a virulent opponent of any one who differs in politics from the G. O. M. of Hawarden. Particularly severe is the editor on what are called "Liberal Unionists," but the vials of his wrath are mainly poured on the head of poor Mr. Chamberlain. The prayer of "Clandius Clear" is of the most unctuous description, grovelling in the dust as a miserable sinner, and beseeching the Fountain of all Light to illumine the understanding and enable the editor to

perform his functions with impartiality and with no other end in view than the advancement of truth. Then in a column close by you come upon the most fearful explosion on the "Liberal Unionists," and truth, justice, and fairplay are scattered to the winds. In a secular paper one would only laugh at it, but a feeling of intense nausea and disgust is generated when you read the secular matter alongside the prayer. It is no doubt a "sign of the times," but a very deplorable one, not to say disgusting. The "prayer" fetches unthinking people of a so-called religious turn. "What a good man," say they, "this editor must be!" and so they adopt him as a teacher in secular politics, and take as Gospel all he writes in applause of the clerical romancers. So, all goes well. The publishers sell their papers and their books. The editor secures a handsome salary, and the trick will be kept up so long as there are fools enough in England and Scotland, to waste their money on the weekly trash.

A squib has been going the round of the Edinburgh Clubs, taking off some of our most arrogant Scotch writers, clerical and secular. It suggests the formation of a self admiration, self-puffing society, which has for its motto the old Scotch saw

"Claw me and I'll claw you,"

which may be an Anglicised "Puff me and I'll puff you." It goes on,

"President :

Andrew Lang, Esq.

Vice-Presidents:

the Rev. Dr. John Watson 'Jan Maclearen,' Rev. Mr. Crockett, J. M. Barrie, Esq. and Robert Buchanan, Esq. The object of the society will appeal to all Scotchmen, as well those who have never left their native land, as to those resident in England, in India, and in our colonies. It is to work assiduously for finding means of erecting monuments to dead and living Scotch writers, whose undoubted claims to immortality are liable to be obscured by the homage paid to the illustrious dead, such as Burns and Scott. Members are being enrolled, but subscriptions will not be called for until it has been finally determined what shall be the exact form of the memorial in each individual case. The names given above are a sufficient guarantee that no merely personal claims will be acknowledged. It is hoped that on the committee about to be formed the Established Church of Scotland will be represented by the very Rev. A. K. H. Boyd, D. D., LL. D., and the Free Church by the very Rev. George Adam Smith, D. D., LL. D."

This has no doubt been set on foot by Lord Rosebery's proposal to have a monument erected to the late R. L. Stevenson. It is frantically opposed by Mr. Wallace, one of the members for a division of Edinburgh, quondam minister of old Greyfriars Church and Editor of the "Scotsman," and now a member of the English Bar. He objects to it on the ground of Stevenson's senseless, almost brutal attack on Burns. The opportunity was too good to be lost on so modest, unassertive a man as Mr. A. Lang, so he rushes into print in the columns of the "Daily News." The value of his judgment may be assessed from his taking the opportunity to sneer at Dugald Stewart and other Scotch "dominies," as he impudently terms them. Andrew Lang sneering at such men! Could impertinence go farther? We shall soon have Crockett and Watson sneering at Walter Scott!

Books. Sir Richard Temple's new book the "Story of my Life" is promised by Messrs. Cassell in a few weeks. I make no doubt it will be one of uncommon interest to all who feel a concern for the welfare of India. He was a fine specimen of the modest, non-assertive Haileybury Civilian, and the natives of India will always feel grateful to him for the generosity with which, from his private purse, he contributed to what would advance their moral and intellectual progress.

Mr. Barrie's "Sentimental Tommy" will shortly be published here. It is now running as a serial in "Scribner's Magazine."

Wit and Humour of the Bar. It is astonishing how both at the English and Scottish Bar wit and humour have died out. The latter was, I think, at the beginning of the century, more famous in this line than the former. Lords Chancellor Cairns and Selborne were not adanted to encourage it, nor the late lugubrious Lord Chief Justice Coleridge. Cairns, a true type of an earnest Low Church evangelical, was as austere as his very High Church brother Selborne. The only Judge of later years who made any pretensions to something higher than wit was the late Lord Bowen. At the Parliament House in Edinburgh, with Lord Eldin (Clark) and Lord Robertson, spontaneous witticism passed away. Here is the famous story of the latter and Sir Walter Scott. The last named, still the "great unknown," had just brought out "Peveril of the Peak," maintaining as best he could his incognito. His head represented a massive peak. Patrick Robertson was a gross, heavily built man, but abounding in humour. One day Sir Walter was limping down the polished floor of the Parliament House and a group of advocates was standing at the fireplace. Robertson cried out "Here comes Peveril of the Peak." Scott replied "And there stands Peter of the Paunch," thus leaving the laugh against Robertson.

I have been led to write the above by an incident connected with the visit of Lord Russell of Killowen and Sir F. Lockwood to

the United States and Canada. The latter is *facile princeps*, the wit, the joker, the punster of the present English Bar. His latest corruscation of wit was deemed of such importance as to be cabled across to the Gladstonian journals. Interviewed as to his prospective tour, the great wit replied, "We are going to a place where there's some water ni! Ni! Niagara is it not?" Sublime wit, indeed!

The Reverend Dr. George Smith. I hear, among the many visitors you are to have this cold season, you may reckon on your old press colleague of the "Friend of India," the Rev. Dr. G. Smith. He now occupies the laborious but important office of Secretary to the Foreign Mission Committee of the Free Church of Scotland, at Edinburgh. His advent in India after an absence of so many years is sure to be productive of good, and I am sure natives of all classes in Calcutta will give him a hearty welcome. As a former Headmaster of the Doveton College, he is sure of a warm reception from the Eurasian community. Should he preach when in Calcutta, you should not fail to hear him, as he is one of the most distinguished pulpit orators in Scotland. In any case, his visit cannot fail to be of vital interest to himself as well as to the native community, as his life has been one long probation of unaffected self-denial and self-effacement, so that he might, in any way, have a part in advancing the moral and intellectual development of India.

I see a capital story going the round of the papers worth quoting: "A Baptist clergyman in Liverpool, who is about to pay a visit to the Holy Land (Christian), was making a great brag about his intended journey to a member of the Liverpool Muslim Institute. 'When I get there,' the parson said in his best pulpit tone, 'I will stand where Moses stood, and read the Ten Commandments from the top of Mount Sinai.' 'You had better stay at home and keep them,' was the Muslim's laconic reply."

AN INDESCRIBABLE SENSATION.

To be easily described a thing must have clear outlines and unmixed colours. In other words it must be simple. A rent in one's clothing, a boil on one's body, a tumble while walking, the shape of a box, &c., are easily set forth in words. On the contrary the complex and comprehensive things puzzle the mind and take the meaning from language.

It was for this reason that Miss Sabina Mitchell, alluding to an experience of illness, says: "At this time there came upon me an *indescribable* sensation. It was as if the power of life were going to fail me, and I should sink down without help, as a stone sinks in water. Yet in saying this I convey no adequate idea of the nature of that feeling. I hope I shall never have it again.

"The illness which led to it began in the spring of 1892. My health appeared to give way all at once. I found myself tired, heavy, and feeble. My appetite was poor, and after eating I had much distress at the stomach and pain at the chest and sides. My strength gradually declined and I became very low, weak, and nervous; and it was *when in this condition* that I felt the indescribable sensation I have spoken of.

"I soon became so depressed in body and mind that it was with great labour and strain that I attended to my business. I was extremely downhearted and feeble, and none of the many medicines I tried did me any real good. In December 1892, Mother Seigel's Syrup was recommended to me, and I began using it with, I confess, small confidence. But after having taken it for a few days I felt wonderful relief. My appetite improved, and eating no longer gave me pain. A short time afterwards the Syrup proved its value in the matter of my disordered nerves. The nervousness disappeared with my increasing strength. Nowadays, whenever I need any medicine, a few doses of Mother Seigel's Syrup quickly set me right. Having had so convincing an experience of what it can do, I recommend it to all my friends and customers. You can make such use as you like of this letter. (Signed), (Miss) Sabina Mitchell, Marchant-le-Feu, Boston, U.S.A., May 17th, 1895."

"In March, 1892," writes another lady, "my health began to give way. I had lost my energy, and was languid and heavy in feeling. I had a sense of faintness and dizziness that was almost constant, and occasional spells of sinking which I cannot describe. Hot and cold flushes came over me, my mouth tasted badly, and after eating I had a feeling at the chest like the pressure of an actual load upon it. I never seemed rested, and awoke in the morning more tired than when I went to bed. I was also much troubled with wind or gas from the stomach, and raised a sour, biting fluid.

"In this manner I continued to suffer for nearly two years, no medicine that I took giving me any relief. In January, 1894, I got a small book and read in it of cases like mine having been cured by Mother Seigel's Curative Syrup. I immediately procured the medicine from Boots' Drug Stores, and after taking it about ten days felt much better. I could eat something nourishing without any pain following. I kept on with the Syrup and was soon in my former good health once more. You have my permission to make this statement public. (Signed) (Mrs.) Ann Shaw, 174, Barnsley Road, Batsmoor, Sheffield, March 8th, 1895."

Touching the "*indescribable sensation*" alluded to by both ladies, an eminent medical author says: "It is syncope without the loss of consciousness. The sufferer has the keenest realisation of the bitterness of dissolution. I have seen stalwart men unnerved and shaken by such experiences till they trembled like aspen leaves."

The cause is an acid poison in the blood produced by indigestion or dyspepsia. The remedy is to purify the blood with Mother Seigel's Syrup, and to tone the stomach in the same way. Use the Syrup on the approach of the earliest signs of weakness.

Sir George Chesney Memorial Committee.

CHAIRMAN :

General Sir Henry W. Norman.

MEMBERS :

The Marquess of Lansdowne, Field Marshal Lord Roberts, Mr. George Allen, Colonel Sir J. Ardagh, Sir Stewart Bayley, Mr. William Bickwood, Sir Edward Braddon, Rev. A. G. Butler, Colonel Sir G. S. Clarke, General Sir E. Colten, Sir Auckland Colvin, Sir Joland Danvers, General C. H. Dickens, Sir Mortimer Durand, General Sir W. Stirling Hamilton, Captain Hext, R. N., Mr. A. P. Howell, Sir W. W. Hunter, Lieut.-Genl. McLeod Innes, General Sir Allen Johnson, Sir H. S. King, M. P., Mr. A. Lawrence, General Sir R. Low, Sir Alfred Lyall, General Sir O. Newmarch, Sir Andrew Scoble, Field Marshal Sir Lintorn Simmons, Field Marshal Sir Donald Stewart, General R. Strachey, General Sir A. Taylor, Mr. Meredith Townsend, Mr. W. C. Unwin, General Sir George White and General Sir E. Williams.

Memorial

TO THE LATE

SIR GEORGE CHESNEY, K.C.B., R.E., M.P.

A Meeting was held, on the 24th April, at the Royal United Service Institution, of some of the friends of the late Sir George Chesney to consider the question of the commemoration of his distinguished services as Soldier, Administrator, Statesman, and Author. General Sir Henry Norman presided, and was supported by Field Marshals Sir Lintorn Simmons and Sir Donald Stewart, and other friends of Sir George Chesney. To carry out the object of the Meeting, a General Committee was formed, which included the gentlemen then present, and in addition, the Marquess of Lansdowne, Field Marshal Lord Roberts, General Sir George White, Sir Andrew Scoble, Sir Alfred Lyall, Sir H. S. King, Sir W. W. Hunter, Mr. Meredith Townsend, General Richard Strachey, Mr. William Blackwood, and others.

The form the Memorial should take was left for the future consideration of the Committee, as it would depend on the amount subscribed, but the suggestions tended towards a bust of Sir George for the India Office, and a medal for valuable contributions to Military Literature. It was resolved to limit each subscription to a maximum of three guineas.

Subscriptions will be received by Lieutenant-General McLeod Innes, 9, Lexham Gardens, Cromwell Road, London, W.

COMMITTEE FOR INDIA :

His Excy. General Sir George White, V. C., G. C. I. E., K. C. B., the Hon'ble Major-General Sir E. Colten, K. C. I. E., Lieutenant-General Sir W. S. A. Lockhart, K. C. B., K. C. S. I., His Excy. Lieutenant-General Sir C. Mansfield Clarke, K. C. B., Major-General J. Duncan, Major-General G. E. L. S. Sanford, C. B., C. S. I., Major-General G. de C. Morton, C. B., Major-General A. R. Badcock, C. B., C. S. I., Brigadier-General W. G. Nicholson, C. B., Captain J. Hext, C. I. E., R. N., Colonel W. S. S. Bisset, C. I. E., R. E., Colonel T. Deane.

Honorary Secretary :
Colonel T. Deane,
Simla.

Subscriptions will be received, in India, by Messrs. King, King & Co., Bombay; Messrs. King, Hamilton & Co., Calcutta; and by the Alliance Bank, Simla, and its branches at Calcutta, Cawnpore, Agra, Ajmere, Darjeeling, Lahore, Murree, Mussoorie, Rawal Pindi and Umballa. Subscriptions are limited to a maximum of Rs. 32 in India.

By order of the Committee,
T. Deane, Col.,
Hony. Secy.

Simla, 18th July, 1896.

POSTSCRIPT.
After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Uckoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Babington Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, K.C.I.E., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindoo Patriot*, in its palmiest days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his life and letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Bibus, the life of at least one most eminent Indian journalist has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are in vervals of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoil by harshness.—*The Muhammadan*, (Madras) Oct. 5, 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unflinching instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, silent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for DICTORS, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Hospital Railway, from Ceylon says:—It keeps splendid time and never stopped although it sustained hard knocks and jerks. x Dr. H. Moore of Royal Artillery from Pondicherry says:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Duntun says:—I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—The watch you sent me some seven years ago is still keeping very good time.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH.

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A. HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada.

Scientific American.

VOL. XV.

CALCUTTA, SATURDAY, OCTOBER 10, 1896.

WHOLE NO. 246.

KUMAR SHRI RANJIT SINGHJI.

PRINCE Ranjit he marched to the westward, from the borders of Bom-
bay he came
To the banks of the Cam, and he collared the crown of the glorious
game,

The game which the Graces and Stoddarts, the flannel-clad ones of
the West,
Declared of all masculine pastimes the proudest and noblest and best.

In the cohort of century-pilers, the sphere-smiting Gilbert was king,
But Ranjit the Run-Getter entered the lists, his triumphs I sing.

Though the poets from Pentaour to Petrarch, from Homer to Austin
would fail
To picture in adequate tints this swart boss of the bat-ball-and-bail!

His sire was a Jam in the East, and so is his son—*real* Jam
In the Raj-Kumar school in the East, or in Trinity College, by Cam,

Upon cocoa-nut matting at home, or green turf at the Oval or Lord's,
"Ranji" shaped like a cricketer sound, and there's scarcely a sight
which affords

More pleasure to judges of "form" than the sight of the slim, swarthy
Prince,
In batting as neat as a trivet, in fielding as sharp as a quince,

Giving beans to the best British bowling, or stopping or sprinting like
steam,
On making that lovely late cut, a serene thing of beauty, a dream

Of delight, an ideal of art, with the charm of a perfect technique,
Which a fellow who knows what is what at the wickets, could watch
for a week!

The public soon knew "Mr. Smith," and they yelled every time he
appeared,
And they gave him the nick-names crowds give to the cracks to their
bosoms endeared—

"Ramegate Jimmy," or "Run-Gin-and-Whiskey"—more pat than
polite, to a Prince,
But the cricketing crowd by familiar facetiousness loves to evince

Its rough but sincere hero worship, as he the great Doctor doth know,
Whom they love to acclaim as "the Old-un, and chaff when he bends
for a "blow"

After running a fiver—near fifty! But Ranjit the Run-Getter soon
Began piling "centuries" quickly to a most remarkable tune,

And having a cut at all records. Some toppers that way he's rubbed
out.

He's a-top of the Averages now, and he means getting higher, no
doubt—

If that's not a bull—Sussex's hope, and the pride of the Cam he
appears,
And when the Light Blues give that banquet, your lovers of big British
cheers

Will have every tympanum tickled by shouts for the "Black Bat,"—
not night,
As Tennyson put it in *Maud*, and Sims Reeves to a nation's delight

Hath flutily piped it so often. And faith! the "Black Bat" hath *not*
flown,
And all Britons hope, well, he won't do, for we love to think "Ranji"
our own.

An ode to him, then, unto whom we, this season, have owed such a lot!
And then British bats fight for those "ashes," and there are some signs
of a "rot,"

When we want someone brilliant *and* steady, hawk-eyed, lion-hearted,
and cool,
A blend of MacLaren and Grace, with the "stick" of the Shrswebury
school,

The sparkle of Stoddart or Wynyard, the patience of Surrey's brave
Bob,
May Ranjit, the Black Prince of cricket, be with us, and "well on the
Job"!

—Punch.

THE CANADIAN BOAT SONG.

[A correspondent sends to the *Glasgow Herald* the following as the
best and most correct of all versions.]

Listen to me, as when you heard our father
Sing, long ago, the song of other shores;
Listen to me, and then in chorus gather
All your deep voices as you pull your oars;
Fair those broad meads—those hoary woods are grand;
But we are exiles from our father's land.

From the lone shieling of the misty island
Mountains divide us, and a waste of seas;
Yet still the blood is strong, the heart is Highland
And we in dreams behold the Hebrides.

We ne'er shall tread the fancy-haunted valley,
Where 'twixt the dark hills creeps the small clear stream—
In arms around the patriarch banner rally,
Nor see the moon go on royal tombstones gleam.

When the bold kindred, in the time long vanished,
Conquered the soil and fortified the keep,
No seer foretold the children should be banished
That a degenerate lord might boast his sheep.

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

Come, foreign raid ! let discord burst in slaughter !
Oh, then for kinsmen true, and keen claymore !
The hearts that would have given their blood like water
Beat heavily beyond the Atlantic's roar,
For these broad meads—those hoary woods are grand :
But we are exiles from our father's land.

WEEKLYANA.

THE general Durga and Lakshmi Puja holidays begin from Monday, the 12th October and continue to Thursday, the 22nd October. There are certain offices in Calcutta in which all these days will not be observed as a holiday. For instance, the Custom House will be open for transaction of business on the 12th, 17th, 19th and 20th October, the Treasury being open. The Custom House will be open (on a day's notice being given), free of charge on the 13th, 14th, 15th, 16th, 21st and 22nd October, from 11 A.M. to 12 noon, for entering or clearing vessels, and for the issue of Bills of Entry or Shipping Bills covering free goods from or to the same. The Treasury on these days will be closed. Such is the notice of the Collector of Customs. The Port Commissioners have notified : "The Collector of Customs having notified that the Custom House will be open on the 12th, 17th, 19th and 20th October, during the usual working hours for the transaction of business without any restriction, these days will be counted as working days under Section 113, Clause 2 of Act III of 1890. On all other days work will be allowed at the Docks, Jetties, and Wharves subject to Customs Regulations." The Comptroller-General has given notice that the Public Debt Office and the Government Account Department at the Bank of Bengal will be open for the transaction of business and the receipt and payment of money on Government account on the 12th, 17th, 19th and 20th October 1896. The Paper Currency Office at Calcutta and the Comptroller-General's Office will also be open on the above dates.

There is no absolute holiday in the Post Office. Only two deliveries will be made daily from the Calcutta General Post Office and its Town Sub-Offices on the three great days of the Durga Puja, viz., the 13th, 14th and 15th October, the delivery arrangements on these days, in all respects, being the same as on Sundays. The other Departments will as usual remain open for the receipt of registered and insured articles and of parcels, and for the issue and payment of Money Orders, as well as Savings Bank transactions.

THERE has been a cry from many quarters for a law to regulate the sale of poisons. The Government of India has not yet seen its way to any such enactment. The sale is unrestricted in the Calcutta market. In advance of Local Governments and Administrations and other municipalities, the Municipal Boards of Hapur, Baghpat, Sardhana, Baraut, Ghaziabad, Shahdara, Mowana and Pilkhwa have taken a bold step and framed rules regarding sale of poison, which have been confirmed by the Local Government. Breach of the rules is punishable with a fine of Rs. 50 and, when continued, with a daily fine of Rs. 5. No person will be permitted to sell, without license, within the municipalities, white, red and yellow arsenic, aconite, nux vomica, dhatura and bichloride of mercury. Licenses are to be granted for terms of years not exceeding five which, however, can be renewed, and no license will be granted unless the applicant is a person of good repute and has sufficient knowledge of the several properties of the poisons. A license-holder is not to sell any of the poisons to any person who is unknown to him, unless the sale be made in the presence of a witness who is known to him and to whom the purchaser is known. Before selling any poison, the license-holder shall satisfy himself that the purchaser requires it for a legitimate purpose, and no sale is to be made to any person who he in good faith believes is below the age of eighteen years. The restrictions do not apply to sale to a medical practitioner or on the prescription of a medical practitioner.

..

AUSTRIA is prepared to allow women to practise medicine. A decree has been published rendering valid medical decrees and diplomas obtained by Austrian women at foreign universities.

..

A GERMAN physician has found that storing uniforms harbour the bacilli of consumption (tuberculosis) in the form of dust.

THE health statistics of British troops in India for the year 1895 are very satisfactory. The ratio per 1,000 of admissions to hospitals is 14'60; of deaths, 13'79; of invaliding 24'34; loss from death and invaliding 38. In the decade 1870-79, the last figure went up as high as 62. Up to 1856, deaths of European troops ranged from 84 to 56 per 1,000.

IN a letter to the *Times*, "Admiral" makes the general statement that the cadets in the *Britannia* acquire coarse manners, use bad language, display contempt for religious duties, bolt their food as if they were animals from the Zoological Gardens, and in other ways behave as cubs rather than as gentlemen. The letter, as was to be expected, elicited many comments and replies. A "Schoolmaster" endorsed the view of the "Admiral." "The Father of a Mid" thought the statement about the irreligious tone of the boys an unjust criticism and did not see how zoological manners could prevail at meals when a naval officer was always present to maintain order. He also said that his son never gave way to bad language nor grumbled at being bullied. One "Contented Mother of a Midshipman" wrote : "I believe the majority, like myself, have every reason to be satisfied with their sons at the end of their course in the *Britannia*. My boy always spoke with respect, often with affection, of his officers and those in authority; his demeanour towards me, and in social intercourse generally, was considerate and gentlemanly. When going to his room to wish the last good night I frequently found him Bible in hand—a proof that the religion taught in childhood still exerted its influence. After three years' commission in the Mediterranean he has returned unchanged—amenable as of old."

WE read in the *Army and Navy Gazette* :

"The passage of the gunboat through the cataracts between Wady Halfa and Gemai was a triumph of energy and skill, upon which Colonel Hunter and his staff will look back with pride. Commander Robertson and Lieutenant Beatty, R.N., with the military officers who assisted them, are to be congratulated on the manner in which the craft were handled. The *Metemneh* was the first boat through the Babel-Kebir; she was followed by the *Abu Klea*, *El Teh*, *Tamai*, and other boats, and the correspondent of the *Daily Graphic*, writing from Gemai on August 20, gives a most striking picture of the difficulties, the barges in tow having to be left behind. The first real difficulty was at the Minnekiddeh Rapids, where the river swirls rapidly round a mass of rocks. Here guy ropes had to be fixed, and Major Martyr and Lord Athlumney plunged through the seething torrent for the purpose. In the shallows of Shagaz one boat had her side ripped open, while Jurash and Kaderma could only be passed by many men hauling on the bank. The Kantara Channel and Kodenina Rapids were ascended without great difficulty, but at Fash the strong arms of 700 men of the 1st Egyptian Battalion were not too many to keep the vessels in their course.

It had been a slow and anxious business occupying three days, in which the muscles and nerves of those engaged had been severely taxed even to get thus far, and none were sorry to pause before attempting the still greater work of hauling the boats through the Babel-Kebir, one of those narrow gates through which this branch of the Nile comes down by steps and steep some 50ft. in the course of 500 yards. The middle descent is the worst, where a great press of water rushes over a sharp ledge of rock. To employ steam power at this place was impossible, so a wire hawser was passed round the hull of each boat, to the bow end of which was attached a coil of some 300 fathoms, with a couple of hawsers; 1,400 men of the 1st and 15th Battalions manned these hawsers and the guys. Lieutenant Beatty stood in the bows of the *Metemneh*, anxiously guarding against the bow hawsers being fouled, and every officer on board had charge of a rope to see that it was hauled upon or slackened in obedience to signal. It was an anxious moment, and the slight craft, creaking and swaying from side to side in the grip of the torrent, seemed as if she would be swept below, but little by little the combined strength of the men began to tell, and upon a zig-zag course she moved slowly ahead; at length came the final struggle, when her bows rose high out of the water as she trembled on the roaring torrent that swept over the threshold of the gate. Strong arms and winches hauled her forward, and as a wave lifted her stern she glided over the obstacle into calm water. The succeeding boats met with the same difficulties, and, though one carried away a bow hawser, the guys held her steady until the damage could be repaired. With the passage of the Babel-Kebir the chief obstacle was surmounted.

Lord Athlumney and Major Martyr are very gallant officers, but without denying them credit for venturesome swimming in the Nile we may observe that the black chaps think nothing of carrying out ropes and hawsers through the boiling cascades. They swim like otters from boyhood. It was, however, no ordinary feat of British officers to attempt such novel work as the officers we name performed the other day above Sarras. One correspondent relates that the men of two native battalions were engaged in work a little out of our line, namely, diving for the rails submerged in the river, which they were obliged to unscrew under water. He adds : "Fortunately all the Egyptians are almost amphibious, and are equally comfortable on the land or in the water."

NOTES & LEADERETTES, OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

THE Queen is suffering from her eyes, and is being treated by Dr. Pagenstecher, a German oculist. The malady has in it nothing abnormal, and is due to age.

THE Tsar and Tsarina arrived at Cherbourg on Oct. 5, and were welcomed by M. Faure, the Presidents of the two Chambers, and the Ministry. The Tsar and the President reviewed the French Squadron, and were accompanied by the Tsarina, notwithstanding the rough sea which prevailed. A grand banquet was given in the evening at which the President and the Tsar mutually toasted each other. It is estimated there are three millions of visitors in Paris. The French papers, in welcoming the Tsar and Tsarina, as a pledge of peace, convey a hint that Alsace and Lorraine are not forgotten. The German papers are equally convinced that the sentiment of Revanche remains in France.

The Tsar and Tsarina entered Paris on Oct. 6 in brilliant weather. No hitch whatever occurred to mar the proceedings, and the enthusiasm of the people was most intense. Their Majesties were evidently greatly gratified by their reception. At a grand banquet at the Elysée, the same evening, President Faure, toasting the Tsar, said the union of the powerful Russian Empire with the laborious French Republic has already produced a beneficial effect on the peace of the world, and would continue to extend its beneficent influence. The Tsar, in reply, said he felt deeply touched by the welcome extended to him in Paris, and added that the precious ties between France and Russia would continue to have a most fortunate influence.

The Tsar has conferred the Grand Cordon of the Newsky Order on MM. Loubet, Bresson, Méline and Hanotaux.

Next day, the Tsar laid the foundation-stone of a new bridge over the Seine to be called Alexander III. Bridge. His Majesty then visited the Hotel de Ville, where he was welcomed by the Municipal President in an address as the ally of the Republic. The Tsar, in reply, merely thanked the Municipal President.

THE *Daily Mail* states that Lord Salisbury returned to London to-day (Oct. 2), and held a conference with Baron De Courcel, the French Ambassador, and M. De Staal, Russian Ambassador. The same paper states that the Sultan has sent ten torpedo boats to the Dardanelles in pursuance of the advice given by the Russian General Tchikatchew, who lately inspected the defences of the Straits under an agreement arrived at between the Tsar and the Sultan. At the conference, it is now evident, the Armenian question was discussed, for a telegram of the 8th says that Great Britain, Russia and France have agreed to an immediate despatch of a vigorous note to the Porte demanding the adoption of reforms which will secure the safety of the Armenians.

A BAND of insurgents in Macedonia have attacked and annihilated a Turkish detachment consisting of fifty soldiers.

SIR William Harcourt, speaking at Ebbw Vale, said he was in favour of an understanding with Russia on the whole Eastern question and the abrogation of the Cyprus Convention.

LORD Rosebery has addressed a letter to the Liberal Whip in which he resigns the leadership of the party, and says: "I find myself in apparent difference with the mass of Liberals on the Eastern question and in some conflict of opinion with Mr. Gladstone, and I receive implicit support scarcely anywhere." This is regarded as the outcome of the recent veiled attacks on him in the Radical papers and elsewhere. The resignation is generally ascribed to Mr. Gladstone's intervention in the Armenian question, and Sir W. Harcourt's persistent ignoring of Lord Rosebery's existence.

TAKING advantage of the high tide washing up to the German Consulate, Said Khalid, the pretender, was to-day (Oct. 2) privately conveyed to the German man-of-war *Seeadler*. Mr. Cave, British Consul, was

not informed of the proposed step, and has lodged a vigorous protest with the German Consul.

The German Press affirm that Said Khalid being a political prisoner, it was impossible to extradite him, and that he was removed openly under a show of force in order to assert the dignity of Germany, because Great Britain protested.

The *Cologne Gazette* publishes a violently anti-English letter from Zanzibar affirming that Said Khalid is the rightful heir to the throne, and that Consul Cave and General Matthews promised to reinstate him if he left the Palace. The letter adds that the British Marines have looted in a manner unworthy of the disciplined troops, and concludes by a virulent personal attack on Consul-General Hurdingle and Consul Cave.

The St. George Flagship of Admiral Rawson, at present at Cape Town, has received orders to proceed immediately to Zanzibar. Reinforcement from the British Mediterranean Squadron has also been ordered to Zanzibar.

A TERRIBLE explosion of a magazine took place at Bulawayo, on Oct. 3, in which five whites were killed and several wounded. Scores of Kaffirs were crushed by fragments of rock, and the streets were strewn with rocks and débris. The hospital, gaol and market are filled with the wounded.

DEATHS are announced of the poet William Morris, M. Du Maurier, Artist, and Lord Kensington.

THE latest weather report is that the air is becoming drier in Northern India. The report from Doshi and Chitral on 2nd October states that rain has fallen every day in the valley and snow on the hills. It is cool at Calcutta with north wind.

THE first forecast of the *Bhadai* crops in Bengal for the present year is not hopeful. The estimated general outturn is lower than last year's. It is 11 against 13 annas of 1895. Out of the 45 districts, only one, Palamou, returns a bumper crop; four districts—Birbhoom, Binkura, Hazaribagh and Singhbhum, an average of 16 annas; 12 districts, from 12 to less than 16 annas; and 28 districts at less than 12 annas. From Shahabad, Muzaffarpur, Cuttack, and Puri, the crop is returned even below 8 annas.

THE Government of India has recognized the new terror that has appeared at Bombay, and has cabled Home that true bubonic plague of a mild type exists in the Mundvie quarter of Bombay, and that about eleven deaths from it are daily taking place. Notwithstanding, the homeward mail, which left Bombay on the 3rd instant, was granted a clean bill of health by the Port Health Officer. Bombay arrivals from India at Niplex will be placed under quarantine. Plague has begun to move. It has shewn itself in other quarters of the city and has travelled northwards to Ahmedabad, which is 21 miles by rail from Bombay. Last week, we were privately informed that the distemper had travelled 300 miles. Its march seems not so rapid. The setting in of the cold weather may arrest the advance, if not stamp out the disease. We pray to the destroyer of all evils—the ten-armed Goddess of the lion throne, Who will be worshipped next week in Bengal, that She protect us from the visitation!

"PLAGUE," in its widest sense, is any fatal epidemic, such as malarial, cholera, or small-pox pestilence in India; carbuncular pest, from which Hzekiah suffered; or the *berri-berri*, the plague of Southern India, which, in November, 1878, visited Calcutta. In a limited signification it is a specific fever, attended by enlargement of maxillary, axillary and especially of inguinal (bubonic) glands. It is called by various names, such as—the pest; inguinal, bubonic, glandular, Oriental, Pili, and Levantine plague; Oriental typhus; septic pestilence; Fr. *la peste*; Ger. *die pest*. Three varieties of this disease have been described:

1. The abortive (larval), the prominent symptoms being enlarged glands of the groins, armpits, and necks without pain and without fever. This form is becoming less and less in virulence.

2. The grave or plague in its usual form. This is heralded by aching of limbs and pain in the body, accompanied by shivering and fever. From the second to the fourth day the inguinal glands take prominence. Suppuration is not a necessary development in fatal cases. Then there are headache, thirst, nausea, vomiting of coffee-

ground matter, constipation and delirium. The temperature of the body soon rises to even 107° F. Blotches or red marks cover the whole body. Sometimes there is hæmorrhage from many of the passages. Death preceded by coma generally ends the agony.

3. The third or fulminant is the severest type. Sufferers are struck down suddenly without any enlargement of glands, &c. This generally occurs in the beginning of an epidemic. Convulsion or coma ends the life.

The Bombay outbreak is evidently a mild type of the second kind. Glandular enlargement can be seen in other diseases affecting only one portion of the body. It is the general enlargement of almost all the glands, especially of the groins, that distinguishes this type from others.

IN ancient times, plague of kinds caused destruction in several countries but not in India. The earliest is recorded by the physician Rufus of Ephesus, who lived in the time of Trajan (A.D. 98-117), and this notice is preserved in the *Collections of Oribasius*. It was bubonic, (the swelling being especially fatal) and found chiefly in Libya (North Africa) for centuries considered the home of plague, Egypt and Syria from the end of the third or the beginning of the second century before Christ. Both Livy and Orosius speak of a pestilence which destroyed a million of persons in Africa. It was not till the sixth century, during the reign of the Emperor Justinian (A. D. 527-565) that Europe was invaded. This plague of Justinian, lasting for half a century, is described by Gibbon in his forty-third chapter. It began at Pelusium, in Egypt, in 542 A.D., spread over Egypt and passed to Constantinople, where in one day it carried off 10,000 persons. The great pestilence of the 14th century, known as Black Death, which overspread Europe, is said to have appeared first in the Kingdom of Kathay (North China), where pestilence and inundations are said to have destroyed 13 millions, and to have proceeded gradually westward by way of Armenia into Asia Minor, thence to Egypt and Northern Africa. It reached Sicily in 1346, Constantinople, Greece, and parts of Italy early in 1347 and towards the end of that year, Marseilles. Next year, it attacked Spain, northern Italy and Rome, eastern Germany, parts of France and Paris and England, and afterwards the Scandinavian countries. In Florence, the distemper carried off 60,000 people, including the historian John Villani. There are writers who distinguish black death from plague and hold that that disease began and ended with the outbreak of the 14th century. It was characterized by a gangrenous inflammation of the respiratory organs, violent fixed pains in the chest, vomiting and spitting of blood, and a horribly offensive and pestiferous breath, which could be perceived at a considerable distance from the patient. In Sir Richard Quain's *Dictionary of Medicine*, we read:—

"Other writers consider black-death to have been a modification of bubonic plague. But if this view be accepted, the extraordinary development and remarkable modification which the disease underwent in the 14th century, stand quite alone in the history of the affection, and constitute phenomena which would have to be regarded as indicative of a secular evolution of morbid changes. This last named view of the relation between black-death and bubonic plague is not without a present interest. For Hirsch and others believe that the *Mahamari* of Northern India—the *Pali*, or *Indian plague*, as the disease is also termed—which has several times prevailed as a local epidemic since the commencement of the present century, is a disease analogous to the black-death of the 14th century. Probably these writers would now include the more recently known *Yunnan plague* in the same category."

Might not *Mahamari* be a type of malarious fever which devastated Gour? The present *Kala-azar* of Assam is suspected to be another variety of it.

The mortality of black death in various parts of Europe has been calculated at two-thirds or three-fourths of the population in the first pestilence. In England, it was even higher. Hecker calculates that one-fourth of the population of Europe, or 25 millions of persons died in the whole of the epidemics.

Thucydides, who himself was infected, gives an account of a plague which overtook Athens about 430. B.C.

Plague had two centres. The first in Egypt including Southern Europe, Africa, Arabia, Asia Minor, Syria, Palestine, Mesopotamia, Assyria and Persia. The other was North China, including the whole of it, Anam and Cochin-China. According to Sir Guyer Hunter, these places were also the home of cholera. It is probable that European countries received cholera from Africa, and India from China. In the London plague of 1665 no less than 68,596 persons died. The great fire of London in 1666 stopped its further ravages. Another plague appeared at Marseilles in 1720, and in 1770 Moscow suffered from the same cause. Notwithstanding that the countries

bordering it on the east and west were visited by the same scourge, India had always been free. The year before last, China was threatened with plague and now Bombay has it. The cause of plague is as unknown, as its devastations are certain. Present opinions ascribe it, like other epidemics, to organic putrefaction, bad drainage, and bad water. In the Chinese plague, Dr. Kitasato discovered a bacillus of the disease, but further research is needed to settle the question. Dr. Yersin is just now experimenting with his anti-bubonic injections at Amoy. Dr. Haffkine and Mr. Hankin have been deputed by the Government of India and the N.W. P. Government respectively to investigate the Bombay outbreak. When will the Bengal Government send its bacteriologist, Dr Cunningham?

It will not be uninteresting to know old world notions about the cause of the disease. They are not entirely valueless.

Some think that insects are the cause of it, in the same way that they are the cause of blights, being brought in swarms from other climates by the wind, when they are taken into the lungs in respiration; the consequence of which is, that they mix with the blood and juices, and attack and corrode the viscera.

Mr. Boyle thinks it originates from the effluvia or exhalations breathed into the atmosphere from noxious minerals, to which may be added stagnant waters and putrid bodies of every kind.

Mr. Gibbon thinks that the plague is derived from damp, hot, and stagnant air, and the putrefaction of animal substances, especially locusts.

Dr. Chandler, who gives an account of the plague at Smyrna, is of opinion that the disease arises from animalcules, which he supposes to be invisible.

The Romans believed  Esculapius sometimes entered into a serpent, and cured the plague.

THE distemper has also been fitful.

Plagues are sometimes partial attacking particular animals, or a particular description of persons, and avoiding others altogether, or attacking them but slightly. Fernellius speaks of a plague or murrain, in 1574, which invaded only cats. Dionysius Halicarnassensis mentions a plague which attacked none but maids; and that which raged in the time of Gentilis, killed scarce any women, and very few but lusty men. Bateria mentions another plague, which assailed none but the younger sort. In the malignant yellow fever which raged in Philadelphia towards the close of the 18th century, the mortality was not so great among women as among men. The corpulent high-fed, and drunken men, common prostitutes, and such of the poor as had been debilitated for want of sufficient nourishment, and lived in dirty and confined habitations, became an easy prey to it; whilst those who resided in the suburbs, enjoying the benefit of country air, were little affected by it. A singular fact is, that the French residing in Philadelphia were in a remarkable degree exempt from it. Cardan speaks of a plague at Basil, with which the Swissers were infected, and the Italians, Germans, or French, exempted; and John Utenhoviuss takes notice of a dreadful one at Copenhagen, which, though it raged among the Danes, spared the Germans, Dutch, and English, who went with all freedom, and without the least danger, to the houses of the infected. During the plague which ravaged Syria in 1760, it was observed that people of the soundest constitutions were the most liable to it, and that the weak and delicate were either spared or easily cured. It was most fatal to the Moors.

It is related that when plague raged in Holland, in 1636, a young girl was seized with it, had three carbuncles, and was removed to a garden, where her lover, who was betrothed to her, attended her as a nurse, and slept with her as his wife. He remained uninfected, and she recovered, and they were married.

The Merv malignant fever reported by Reuter last week, has selected children for its attack.

THE current number of the Englished *Charak-Samhita* seems to have anticipated the outbreak of plague at Bombay. Lesson III of "The Place of Vimanam" treats of the destruction of towns and large villages. To the question of Agniveṇa—"How can the habitations of men who differ in nature, food, body, strength, capacity of bearing particular things and practices, mind, and age, be simultaneously destroyed by one disease," the illustrious son of Atri replies:

"O Agniveṇa, of men differing from one another in these particulars, viz., the circumstances of nature and the rest, there are other circum-

stances that are common (or similar); these last being perverted, diseases agreeing in point of time and of symptoms, break out and become destructive of habitations.

Verily, there are these circumstances that are common to human habitations, *vis.*, atmosphere, water, soil, and time (season).

Amongst them, when the atmosphere becomes as follows, it should be known as destructive of health: *vis.*, contrary to (what is proper for) the season; exceedingly moist; exceedingly changeful (as regards direction), exceedingly keen, exceedingly cold or exceedingly warm, exceedingly dry, constantly pouring vapours, fraught with awful roars, blowing from different directions and counteracted in respect of its currents, blowing in whirls, and fraught with disagreeable scent or vapour or sand or dust or smoke.

When the water becomes exceedingly foul in scent, colour, taste, and touch, full of impurities, deserted by aquatic fowl, almost dried up in its receptacle, and disagreeable, it should be known as reft of its proper virtues.

The soil (of a region), again, should be known as baneful when, as regards its nature, it has become foul in colour, scent, taste, and touch; full of impurities, afflicted by reptiles, and wild beasts, and gnats, and insects (such as locusts and other leaf-eating ones), and flies, and mice, and owls, and such vultures and jacksals and other animals as live in crematoria (or subsist on carrion); when it abounds with high grass and *saccharum cylindricum* and bushes, teems with creepers of every kind, full of abandoned (uncultivated) fields, and is disfigured with dried up and lost crops; when its atmosphere has become smoky; when it resounds continually with the cries of birds and barking of dogs; when agitated animals in crowds and birds in flocks are seen to run and fly over it in different directions; when its cities and towns and villages have abandoned, or become reft of, piety, truth, modesty, established usages, good conduct, and other merits; when its receptacles of water are continually agitated; when meteors and thunderbolts are constantly seen to fall and earthquakes are frequent; when it constantly echoes with loud noises; when the sun, the moon, and the stars, are frequently covered by masses of clouds that are dry or coppery or red or white; when the inhabitants are always agitated by anxiety or fear, and when cries of grief seem to come from every side; when a darkness seems to overspread the whole area; when night-wanderers and ghosts seem to stalk over every place; and when cries and loud noises of various kinds seem to come from every direction.

As regards Time, that should be known as baneful which discovers symptoms contrary to those which properly belong to the season (that is running), or symptoms that are aggravated or attenuated in comparison thereto.

They that are possessed of knowledge and experience say that these four, when existing with such conditions, become destructive of cities and towns and villages.

Even if all the four ending with Time become vitiated still if men be treated with (proper) medicines, they are unlikely to be afflicted.

Of men not subject to death as their common fate or not characterized by commonness of acts, medicine consisting of the fine operations is said to be the highest remedy.

In such cases the due administration of *Rasayanas* is highly spoken of, as also the support of the body, with the aid of the medicinal plants culled beforehand."

We give another old receipt from a different source:

"The Mahomedans believe that the plague proceeds from certain spirits, or goblins, armed with bows and arrows, sent by God to punish men for their sins; and that when the wounds are given by spectres of a black colour, they certainly prove fatal, but not so when the arrows are shot by those that appear white. They therefore take no precaution to guard themselves against it. The wiser professors of this religion, however, at present act otherwise; for we find a receipt recommended by Sidi Mohammed Zerroke, one of the most celebrated Marabout's, prefaced with these remarkable words: 'The lives of us all are in the hands of God, when it is we must die. However, it hath pleased Him to save many persons from the plague, by taking every morning while the infection rages one pill or two of the following composition; *vis.*, of myrrh two parts, saffron one part, of aloes two parts, of syrup of myrtle-berries, *q. s.*'"

In 1770, the Commission at Moscow invented a fumigation-powder which was believed to be a preventive. Its efficacy was tried in the following manner. Ten malefactors under sentence of death, were, without any other precautions than the fumigations, confined three weeks in a lazaretto, and up in the beds and dressed in the clothes which had been used by persons sick, dying and dead, of the plague in the hospital. None of the ten were infected. The powder was prepared thus:

Take leaves of juniper, juniper-berries pounded, ears of wheat, guaiacum-wood pounded, of each six pounds; common saltpetre pounded, eight pounds; sulphur pounded, six pounds; Snyretur, or myrrh, two pounds; mix all the above ingredients together, which will produce a pound (equal to 36 pounds English avoirdupoise) of the powder of fumigation of the first strength.

THERE are two pictures painted by Puget representing some of the horrid scenes during the Marseilles plague of 1665, which carried off not less than 60,000 people in seven months during which it raged. Lady Craven, in her *Letters*, alluding to these two pictures, says: "They are only too well executed. I saw several dying figures taking leave of their friends, and looking their last anxious, kind, and wishful

prayers on their sick infants, that made the tears flow down my cheeks. I was told the physicians and noblemen who were assisting the sick and dying, were all portraits: I can easily conceive it; for in some faces there is a look of reflection and concern which could only be drawn from the life."

THE Health Officer has issued the following request to medical practitioners in the town:

"As Plague appears to have broken out in Bombay, it is highly desirable that any suspicious case occurring in Calcutta should be immediately brought to the notice of the Health Department; and the Health Officer will be much obliged if practitioners will assist him in this matter by reporting such cases at once; so that timely and effective precautions may be taken to prevent its spread.

The disease being of rare occurrence, the Health Officer would point out the more prominent symptoms in order to facilitate its early detection. The incubation period usually lasts from 3 to 5 days.

Symptoms. The disease is generally ushered in by shivering, general pains, great malaise and depression. High fever, ranging from 103 to 105, is present on the first day; severe headache and violent delirium may set in and the symptoms rapidly assume a typhoid form. On the 2nd or 3rd day, buboes appear in the groins, the armpits or beneath the angle of the jaws, attended with severe pain and tenderness, and which usually, after a few days, suppurate. The occurrence of the buboes is generally followed by subsidence of delirium and fever, the skin being covered with a profuse sweat and the pulse falling to 90 or 100. Associated with the buboes, Patechiz and Vibices are often present over the surface of the body. There may be Hæmaturia, Hæmoptysis or Hæmatemesis.

29th September, 1896.

W. J. SIMPSON, M.D.,
Health Officer."

Mr. R. Steel has suggested:

"Let the Health Department publish a list of competent men who will be willing, for a moderate fee, to inspect private premises and give orders for the removal of nuisances and the proper use of disinfectants. For this purpose I think that competent native doctors would be most useful and the most easily available. There should be a first visit for inspection and order, and, after an interval, a second visit to see that orders have been carried out. Native servants would have no objection to their godowns being visited by a man of their own religion, and a fee of Rs. 16 would be sufficient remuneration for the service indicated and would be readily paid by householders."

Our suggestion is that volunteer medical practitioners be appointed to inspect the several wards and to report on them to the Health Officer. We are sure there are medical men who will willingly, without any remuneration, do the work. During a great calamity, men grow generous, for their own good and the good of their neighbours. There are occasions, private and public, when the most avaricious or the parsimonious are free with their purse, and the present is one which cannot fail to appeal to their humane feelings. In our own ward, we can, we think, count upon the voluntary services of two at least. Dr. Sircar's health will not perhaps be able to bear the strain. Dr. Jugendra Nath Ghose is a Municipal Commissioner and is always on the move. He is not expected to grudge the task. Dr. Hem Chandra Ray Chaudry is a public-spirited citizen and devotes much of his time to study of special subjects, including sanitation. He will not possibly refuse the request.

REIS & RAYYET.

Saturday, October 10, 1896.

THE LAW CONGRESS IN AMERICA.

LORD RUSSELL'S ADDRESS.

CONGRESSES and Conferences are the order of the day. Not the least of recent years was the gathering of lawyers at Saratoga in August last, when the Lord Chief Justice of England delivered a masterly address.

Peace hath her victories

No less renown'd than war,

The scene of General Burgoyne's humiliation, the turning point in the war of American Independence, was the place where another of England's sons, though belonging to a different sphere, received every possible mark of homage. We read in the *Times*:

"Saratoga Springs, N. Y., August 20. The Law Congress was opened here to-day in the Convention Hall, over 4,500 persons being present. The audience was one of the most distinguished that ever gathered at this cosmopolitan resort, and gave great attention and a cordial reception to the address delivered by Lord Russell of Killowen, Lord Chief Justice of England, before the American Bar Association. When Lord Russell had concluded, the vast audience spontaneously rose to their feet and gave vent to enthusi-

astic applause. Cheer after cheer rang through the hall, and it was a quarter of an hour before the last echo died away. Many flocked on to the platform and, heartily shaking both his lordship's hands, congratulated him on his masterly speech."

The theme on which Lord Russell spoke was International Law. After the usual preliminary courtesies, he proceeded to refer to his plea for choice of subject, and, in doing so, paid high compliments to American jurists for services rendered in the field of International Jurisprudence. He then gave an outline of the plan in which he proposed to deal with his subject. He said he would begin by defining the nature of International Law and describing its sources, and, after referring to the ethical standard to which it ought to conform, would conclude with some needful observations on what was called International Arbitration.

It is impossible, within the compass of this article, to refer to all the facts, or to discuss all the questions that were dealt with in the address. Yet as there are some points in it which are of great interest to both the philosophical jurist and the practical politician, we cannot do without noticing some of the views and doctrines propounded by the illustrious speaker. In defining International Law, he began by taking exception to Austin's analysis of what that great jurist calls positive law. According to Austin, law is the command imposed on the subject members of a political body by their superior who has the coercive power to compel obedience and punish disobedience. Lord Russell says that this definition is too narrow, inasmuch as it relies too much on force as the governing idea. It must, however, appear clear upon reflection that, although law is in the majority of cases obeyed by the people voluntarily, yet there is a substantial difference between the functions of the secular rulers of a country and those of the moral teacher. The latter may consider it sufficient for them to impress upon men the nature of the rules they seek to inculcate. But a secular monarch must enforce his commands by condign punishment, and a legal code must be very different from a book of sermons. There is hardly any rule of law in the statute-book of any civilized nation for which a sanction is not provided. In this country, there have been proposals for making decrees for restitution of conjugal rights unenforceable by coercion. If the law were so altered by the Legislature, it would be the only instance of a legal right without a corresponding sanction.

It is easy enough to find apparent faults with the Austinian definition of law. For instance, it does not render it possible to distinguish between laws properly so called and the orders imposed by a powerful sovereign on a weak and protected ruler of a neighbouring State. Austin himself has not only admitted this, but has shown that the defect is unavoidable. He says that the definition of the abstract terms "independent, political, society" and "sovereignty," which are involved in his definition of law, cannot be worded in language of perfectly precise import, and are, therefore, a fallible test of specific cases. (See Lecture VI.) The difficulty of defining the characteristics of an independent political society or of sovereign power is, to a great extent, of the same nature as that which is experienced by mathematicians in defining a point or a line. It is no more possible for the jurist so to define sovereignty or independent political society as to be a test of specific cases, than it is for the geometer to define a point or line in such a manner as to be equally applicable to all concrete

instances and at the same time useful for scientific purposes. Austin's definitions of the above mentioned juristical notions have yet their use, just as the geometrical definitions have theirs.

Lord Russell says that, if the Austinian definition of law were accepted, there could be no such thing as International Law. By the same process, Mr. Nelson, of the Indian Civil Service, arrived at the conclusion that there could be no such thing as Hindu Law, and that what was so called was only a phantom of the brain of lawyers without Sanskrit and of Sanskritists without law. Lord Russell admits the existence of International Law, and denies only the correctness of the Austinian definition.

In controverting the Austinian doctrine, Lord Russell lays much stress on the facts revealed by history relating to the origin and development of legal systems. Historically, law has its origin in those rules of conduct which are recognised as binding by the tacit consent of the members of primitive societies, and which are called customary laws. At a later period, these rules, with more or less modifications and additions, are reduced to writing by a jurist claiming to be divinely inspired, and embodied in a code which is regarded as a gift of the Deity and, as such, infallible. At a still later period, these rules are practically amended or repealed by exegetes and Judges. But at these stages there does not appear anything in the process of legislation to show that the rules framed for regulating the conduct of men are the commands of any sovereign. Their authors are wise enough not to proclaim from the house top that they are the political superiors, and that the laws framed by them must be obeyed, because of their having so ordered. They are content with the reality of the power, and take every care not to make any ostentatious display of it. Their very *modus operandi* rendered it impossible for the people to discern the hands that put the chains for preventing lawlessness. Is it, therefore, to be said that the laws they framed were not their commands? One might as well believe in the fiction that the Judges of England have never made laws, but have, from the beginning, only interpreted them. The historical objection raised by Lord Russell does not, it seems, go far to prove that the Austinian definition is untenable. Of course, we speak with diffidence and deference. When the highest authorities differ, who shall decide?

Lord Russell defines International Law as the sum of the rules or usages which civilized States have agreed shall be binding upon them. In this view, International Law can certainly be so called consistently with the Austinian definition of law. When the great jurist says that law is the command of the sovereign, he does not certainly mean that only the so called Kings, Parliaments, Senates, and Legislative Councils have the power of making laws, or that it is not in their power to adopt tacitly the rules framed by eminent jurists. When sovereigns ruling different countries agree among themselves to accept any set of regulations for their guidance in matters relating to their conduct towards one another, those regulations, whatever

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

their source, become law according to the substance of the Austinian definition. The great jurist himself is somewhat opposed to the designation commonly given to the subject under consideration. He says:

"The department of the science in question which relates to International Law, has actually been styled by Von Martens, a recent writer of celebrity, 'positive oder praktisches Völker recht': that is to say, *positive* international law, or *practical* international law. Had he named that department of the science 'positive international morality' the name would have hit its import with perfect precision." (Lecture V).

It should be noted here that, in such passages as the above, the author speaks more of international rules of morality than about rules of international conduct recognized by independent sovereigns, either by tacit consent or by express agreement. The latter class of rules form the theme of Lord Russell's address, and might well be called international law consistently with the Austinian definition of the term law.

Lord Russell is not in favour of codification of international law in the present stage of human civilization. He said that International Jurisprudence is in a state of growth and transition. To codify it would be to crystallize it; uncoded, it is more flexible and more easily assimilates new rules. We confess we cannot catch the force of the objection. If codification of the rules of International law be feasible at all, then the code first compiled might be modified also, from time to time, as experience grew, or to meet cases that might arise afterwards. The chief objection is that it would be exceedingly difficult to frame rules that might be equally acceptable to all nations. The great Powers in the enjoyment of exceptional advantages cannot be easily led to concede to the weaker States perfect equality. Take, for example, the case of the Indian princes. The Lord Chief Justice of England says in his address:—

"It is a cardinal principle of the law of nations that each sovereign power, however politically weak, is internationally equal to any other political power, however politically strong."

A noble principle no doubt, and one that ought to be written in letters of gold in every Council Chamber and Secretariat. But will the British Government place the Indian princes on a footing of equality with its own? That millennium is never likely to arrive.

Considering the present state of things, the great Powers can never be expected to take the initiative in codifying International Law, and the weaker States have presumably neither the power nor the activity to make their ideas acceptable. The codification can, therefore, be rendered possible only by the great jurists and statesmen of different countries clubbing together and collaborating. If attempts by individual jurists like Field or Bluntschli have failed, we need not despair. The task is an exceedingly difficult one, and there must be some failures in the beginning, especially when undertaken by individuals. The efforts made deserve the highest commendation, and it is much to be regretted that the Lord Chief Justice of England has not a word of encouragement for them.

In speaking of the undesirableness of codifying International Law, the Lord Chief Justice refers by way of analogy, to the question of dealing with Hindu and Mahomedan law in the same manner, and says that the codification of these is objectionable on the same ground as that of International Law. There is, however, no real analogy between the two. The codification of Hindu and Mahomedan laws, however desirable from an abstract

point of view, is undesirable for the simple reason that it would be regarded by Hindus and Mahomedans as an interference with their religion, and would create a deal of discontent without any compensating advantage. There are, no doubt, many disputed points in both Hindu and Mahomedan Law which may, to some extent, be set at rest by legislation in modern form. But codification may give rise to new questions quite as embarrassing as those that now puzzle Judges and advocates in their ignorance of our laws. At any rate, so long as questions of Hindu and Mahomedan law are decided on the basis of recognised authorities, the people can have very little ground for complaint, however erroneous the decision in any particular case may be. But once those authorities are pushed aside and reliance is placed solely on laws enacted by the Indian Legislature, the party suffering by the innovation would be sure to raise the cry of interference with religion, and the very existence of the British empire would be threatened.

The codification of International Law involves great difficulties. It is, however, not, like the proposals for similar treatment of Hindu and Mahomedan Law, objectionable from the point of view of sound statesmanship.

With regard to the limits of arbitration for the settlement of International disputes, Lord Russell is very practical.

"It behoves, then, all who are friends of peace and advocates of arbitration to recognize the difficulties of the question, to examine and meet these difficulties, and to discriminate between the cases in which friendly arbitration is and in which it may not be practically possible. Pursuing this line of thought, the shortcomings of international law reveal themselves to us and demonstrate the grave difficulties of the position. The analogy between arbitration as to matters in difference between individuals and to matters in difference between nations carries us but a short way. In private litigation the agreement to refer is either enforceable as a rule of Court, or, where this is not so, the award gives to the successful litigant a substantive cause of action. In either case there is behind the arbitrator the power of the Judge to decree and the power of the Executive to compel compliance with the behest of the arbitrator. There exist elaborate rules of Court and provisions of the Legislature governing the practice of arbitrations. In fine, such arbitration is a mode of litigation by consent, governed by law, starting from familiar rules, and carrying the full sanction of judicial decision. International arbitration has none of these characteristics."

"Again, a nation may agree to arbitrate and then repudiate its agreement. Who is to coerce it? Or, having gone to arbitration and been worsted, it may decline to be bound by the award. Who is to compel it? These considerations seem to me to justify two conclusions. The first is that arbitration will not cover the whole field of international controversy, and the second, that unless and until the great Powers of the world, in league, bind themselves to coerce a recalcitrant member of the family of nations, we have still to face the more than possible disregard by powerful States of the obligations of good faith and of justice. The scheme of such a combination has been advocated, but the signs of its accomplishment are absent. We have, as yet, no league of nations of the Amphictyonic type."

Lord Russell concluded with the following magnificent peroration:—

"Mr. President, I come to an end. I have but touched the fringe of a great subject. No one can doubt that sound and well-defined rules of international law conduce to the progress of civilization and help to insure the peace of the world. In dealing with the subject of arbitration I have thought it right to sound a note of caution, but it would, indeed, be a reproach to our 19 centuries of Christian civilization if there were now no better method for settling international differences than the cruel and debasing methods of war. May we not hope that the people of these States and the people of the Mother Land—kindred peoples—may in this matter set an example of lasting influence to the world. They are blood relations. They are indeed separate and independent peoples, but neither regards the other as a foreign nation. We boast of our advance, and often look back with prying contempt on the ways and manners of generations gone by. Are we ourselves without reproach? Has our civilization borne the true marks? Must it not be said, as has been said of religion itself, that countless

crimes have been committed in its name? Probably it was inevitable that the weaker races should in the end succumb, but have we always treated them with consideration and with justice? Has not civilization too often been presented to them at the point of the bayonet and the Bible by the hand of the filibuster? And apart from races we deem barbarous is not the passion for dominion and wealth and power accountable for the worst chapters of cruelty and oppression written in the world's history? Few peoples—perhaps none—are free from this reproach. What, indeed, is true civilization? By its fruit you shall know it. It is not dominion, wealth, material luxury: nay, not even a great literature and education widespread—good though these things be. Civilization is not a veneer; it must penetrate to the very heart and core of societies of men. Its true signs are thought for the poor and suffering, chivalrous regard and respect for woman, the frank recognition of human brotherhood, irrespective of race or colour or nation or religion, the narrowing of the domain of mere force as a governing factor in the world, the love of ordered freedom, abhorrence of what is mean and cruel and vile, ceaseless devotion to the claims of justice. Civilization in that, its true, its highest sense, must make for peace. We have solid grounds for faith in the future. Government is becoming more and more, but in no narrow class sense, government of the people by the people and for the people. Populations are no longer moved and manœuvred as the arbitrary will or restless ambition or caprice of Kings or potentates may dictate. And although democracy is subject to violent gusts of passion and prejudice, they are gusts only. The abiding sentiment of the masses is for peace—for peace to live industrious lives and to be at rest with all mankind. With the prophet of old they feel, though the feeling may find no articulate utterance, 'How beautiful upon the mountains are the feet of him that bringeth good tidings, that publisheth peace.' Mr. President, I began by speaking of the two great divisions—American and British—of that English-speaking world which you and I represent to-day, and with one more reference to them I end. Who can doubt the influence they possess for insuring the healthy progress and the peace of mankind? But if this influence is to be fully felt, they must work together in cordial friendship, each people in its own sphere of action. If they have great power, they have also great responsibility. No cause they espouse can fail; no cause they oppose can triumph. The future is, in large part, theirs. They have the making of history in the times that are to come. The greatest calamity that could befall would be strife which should divide them. Let us pray that this shall never be. Let us pray that they, always self-respecting, each in honour upholding its own flag, safeguarding its own heritage of right and respecting the rights of others, each in its own way fulfilling its high national destiny, shall yet work in harmony for the progress and the peace of the world."

When such sentiments find such exponents and meet with such cordial reception from the best men in the New World the "good time" dreamt of by the poet may not be very far in the distance.

We may not live to see the day,
But earth shall glisten in the ray
Of the good time coming.
The pen shall supersede the sword,
And Right, not Might shall be the lord
In the good time coming.
Worth, not Birth, shall rule mankind,
And be acknowledged stronger;
The proper impulse has been given;
Wait a little longer.
War in all men's eyes shall be
A monster of iniquity
In the good time coming.
Nations shall not quarrel then
To prove which is the stronger,
Nor slaughter men for glory's sake;
Wait a little longer.
Hateful rivalries of creed
Shall not make their martyrs bleed
In the good time coming.
Let us aid it all we can,
Every woman, every man,
The good time coming.
Smallest helps, if rightly given,
Make the impulse stronger;
'Twill be strong enough one day;
Wait a little longer.

OUR LONDON LETTER.

September 28.

The British Association met at Liverpool on Wednesday, under the distinguished presidency of Sir Joseph Lister. I send you a full report of his address as, from time to time, you might find space to reproduce it in your columns. To your medical readers it abounds with matter of a highly instructive character, while the layman will find in it a mine of instruction as to the correlation of science and surgery. With a modesty, one of the most attractive features of his character, so rarely met with in his profession, Sir Joseph Lister tells the story of his own wonderful discoveries, and heartily acknowledges all he owes to Pasteur. But he cannot rob himself, even if he would, of the debt of gratitude humanity owes him for his "contribution to the promotion of human happiness and ease."

The Armenian Agitation grows apace, but it is doubtful if it will lead to anything. All the outlets of public opinion go to show that no good can come out of such a demonstration, possibly a vast amount of evil. Without the aid of Russia we are helpless, and for us to run the risk of a European war with the great Powers against us would involve a shedding of blood, to which the Constantinople atrocities would bear no parallel. I say nothing of the squandering of untold millions, but the consensus of all moderate, unshrinking opinion is, that were Great Britain to attempt to interfere off her own bat, we would witness a general European conflagration without a parallel in the world's history.

Tynan or No 1. On the morning of the 14th instant, we were all startled by the announcement that the infamous No 1 of the Phoenix Park Tragedy had been apprehended at Boulogne by an officer of Scotland Yard. For fourteen years he has managed to evade the officers of justice, but all the time the head officials of our detective department had been silently but sagaciously watching his movements. So, when warned of his having left America for Europe, booked to Genoa, his movements were carefully watched, and at last, on Sunday the 13th, he was arrested at Boulogne. The arrest, in itself, is a matter of supreme moment, but, taken in connection with others that have been seized at Rotterdam and Glasgow, it would appear we have just escaped a recrudescence of Fenianism in its very worst and most diabolical development. Curiously enough, the public had just been warned that Fenianism was neither dead nor sleeping. In connection with Mr. Dillon's grotesque convention at Dublin, it was pointed out that the two prime movers in Irish affairs were the Priests and the Fenians. Many wild reports are flying about, but nothing really definite will be known until Tynan is extradited from France, and the other scoundrels from Holland. Meanwhile, the Glasgow accomplice, Bell, is safely lodged here, and in the course of three weeks or so we may hope to have the plot unravelled at Bow Street. Bell was at Bow Street yesterday and his case remanded for a week. Bearing on these fiends the question of

Release of the four Dynamitards is somewhat *apropos*. The Home Secretary having, on the strong recommendation of medical experts, released four of the notorious Dynamitards, has come in for a full measure of searching criticism, particularly from his own party. Our friend Sir H. Howorth from his Highland retreat exhausts his pen (if that be possible) in acting the part of the "candid friend" immortalised by George Canning. It is amusing to watch the angry diatribes of those supporters of the Government who think they have a grudge against it. For example, Lord Londonderry in his most truculent style sits upon the Home Secretary. Now, if he were plain Mr. Charles Stewart no one would give the smallest coin of the realm for his opinion on any subject whatever. But, because he is Marquis of Londonderry, the journals hostile to the Government elevate him at once to the rank of a statesman. Of Sir H. Howorth's muddle-headed letters to the "Times," I have already spoken. But where are Sir A. Rollic and Captain Bowles? They must be touring beyond the reach of newspapers, otherwise they would have joined in the fray, not to be outdone by Charles Stewart and Howorth.

The policy of condemning these wretched Dynamitards to imprisonment for life, is a question quite apart. They were guilty or not guilty of one of the foulest conspiracies against human life. If the latter, they should have been acquitted. If the former, they should have forfeited their lives. As to the middle course of life-long imprisonment, I have never been able to see the justice or good policy.

Mining labour in Bengal. The report of the Labour Commission issued by the Bengal Government indicates that the great question of Chinese labour is likely to come to the front, and that before very long. I feel sure Sir Alexander Mackenzie will deal with the question in a very different spirit from that which has

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 19 SOUTHAMPTON BUILDINGS, HOLBORN, LONDON.

guided American and Australian legislation. It seems to be admitted that a "Chinese miner will turn out four times the quantity of coal which the leisure-loving Sonthali labourer cuts in a day; that he will work many more days in the year." The report points out the enormous development of the coal industry in Bengal. It now supplies all but three quarters of a million tons, of the entire output of India. In the three years from 1891-94, the number of Bengal mines returned to Government increased from 77 to 194. This naturally led to a demand for increased labour. The local labourers are well enough if they would work with a will, but they are easy-going, devotees of amusements innocent enough in themselves but not consistent with steady prolonged work from day to day throughout the year. The Commission suggests a larger importation of native labour from the North Western Provinces, and to get rid of the present far from satisfactory arrangements for recruiting such labour, by seeking for Government interference and control. The wages earnable at the mines are adequate to tempt labourers from Northern India, being seldom less than double and often fourfold of what could be obtained in the districts from which they come.

Our *Commercial Morality* does not appear to improve, notwithstanding the boasting of the Churches. In a case recently tried before the Lord Chief Justice of England, he made some very severe remarks on the question of "secret commissions in trade." Sir Edward Fry, a high authority, has addressed the "Times" on that and other cognate matters of a disreputable character. He enumerates the following:

1. Over insurance of vessels.
2. Bad and lazy work too often done by those in receipt of wages.
3. The adulteration of articles of consumption.
4. The ingenuity exercised in the infringement of trade-marks.
5. A whole class of frauds exists in the manufacture of goods by which a thing is made to appear heavier or thicker, or better than it really is.
6. Bribery in one form or other makes hollow and unsound a great deal of business, including transactions in which the profession of engineers and architects are interested.

Sir Edward Fry goes on to say "these practices are a disgrace to our civilization; they are specially disgraceful in an age which prides itself on its recognition of that social tie between man and man which every one of these practices tends to break or loosen."

So you see when we upbraid natives of India engaged in trade for their laxity of principle, we have first to take the "mote out of our own eye." There are two of your Calcutta institutions freely spoken of as requiring the sharp eye of Government to be kept upon them. I refer to the Municipality and the Port Trust. What too about your Docks at Kidderpore? Was there no bribery and corruption involved in their construction? It is a subject of common observation among old Indians what marvellous fortunes some English members of the Public Works Department manage to accumulate. Their style of living could never be covered by any amount of savings out of their ordinary salaries, after throwing in their somewhat inadequate pensions.

Mr. Curzon's remarkable series of papers on the Geography of the Pamirs and the source of the Oxus has now been completed. The latter question is still unsettled, many of our most eminent Anglo-Indian geographers finding it impossible to accept Mr. Curzon's conclusions, while fully acknowledging the "thoroughness and fairness of his work." In his last paper Mr. Curzon reviews the "discoveries made by the long list of travellers of many nationalities, who from the commencement of the Christian era have visited or crossed the Pamirs." The first historic glimpse we get of the "roof of the world" is due to the Buddhist pilgrims who journeyed from China between 399 and 829 A. D. Then a great gap follows, and it is not until 1274 we come upon the travels of the great Venetian, Marco Polo, for the elucidation of which we are so much indebted to that accomplished and much respected Anglo-Indian, the late Sir Henry Yule. Again some six centuries pass before, in 1838, Captain Wood of the Indian navy lays the foundation of scientific discovery in "Central Asia." Mr. Curzon is satisfied that Captain Wood followed the route taken by the Chinese Buddhists fourteen centuries ago, and again by Marco Polo in 1274. Full justice is done to those native representatives of the Government of India who followed in Wood's footsteps, and whose devoted labours were of so real a value. Then, in 1874, the Indian Government sent the first expedition undertaken by British agents with a "fully equipped staff."

In 1877, "three French savants passed from Russian territory in Ferghana to British Indian territory in Chitral." Many names are given of distinguished officers who have rendered signal service in Pamir exploration, during recent years, and recognition is made of the Dutch Comte de Bylandt in 1894, and of the Swedish Dr. Soen Hedin in 1895. The "Times" adds, "if a fair diplomatic understanding has now been arrived at between Great Britain and Russia, it is due in no small measure to the cumulative effect of explorations conducted by independent travellers

with no political interest to serve." It is amazing what Russian peristency and energy have accomplished. Mr. Curzon says: "In the majority of places the Russians have not been the first in point of time to arrive. But, having arrived they have commonly effected more. It is only twenty years ago that Skobeleff's expedition began the initial work, and in 1877 the first fully equipped expedition was sent forward by General Kaufmann." The demarcation commission of last year left Russia in possession of the bulk of the Pamirs, leaving the Little Pamir as "a sort of unpeopled buffer state between." Mr. Curzon finally adds, "the boundaries having been determined, there survives no legitimate cause of political quarrel." The words applied by Mr. Gladstone in January 1878 to Lord Beaconsfield always seem to me to be applicable to the onward march of Russia East and West. "It is the persistent, never-failing *will*, always watching the opportunity," &c., &c. It is the marvellous continuity of Russian policy, which never sleeps, and which never halts even when suddenly deprived of such a leader as Prince Lobanoff. Mr. Gladstone's words have been recalled to my mind by the latest development of Russia's onward progress.

It is no less than the "creation of a new Sevastopol on the extreme northwest point of European Russia, to which is to be given the name of Ekaterinograd. The pioneer of this marvellous undertaking, M. Bielmor, has already obtained for it imperial sanction. The spot determined upon is in what is known as Murman Bay on the Murmanian or Russian Lapland coast. A Norwegian engineer has been appointed by the Russian Government to lay the foundations of this "new military harbour and arsenal." M. Bielmor writes: "My idea is first to establish a powerful naval station in the Murman Bay, and to connect that strategical point by railway with Kronstadt and St. Petersburg, this line to pass by Kemi and Petrozavodek. As there is already a railway as far as Ulcaborg, this new line would not be so very long. Another point about this port would be that no hostile fleet should be able to blockade it." M. de Witte's recent visit to this very point indicates the importance attached to the project.

In the not distant future we shall see Russia, by her persistent energy, with an outlet on the east in her harbour of Vladivostok, and on the west in the Arctic Bay of the Murman coast. Nor is this all. The early completion of the Trans-Siberian Railway and its connections will bring about "one of the most remarkable revolutions in the conditions of transport that the world has ever seen." "The total length of this line, the longest hitherto constructed or projected in the history of the world, is 4,547 miles from Cheliabinsk to Vladivostok." It is anticipated we may see the completion of this line in from two to three years. Over 900 miles were constructed last year, and there are now engaged on the works more than 70,000 men besides the "engineering and administrative staff." But it is not only the main line that commands our wonder and admiration. There are several branches, one of the most important of which is one projected from Kiakhta to Peking. This would only involve an addition of from 600 to 700 miles, and "once at Peking the line could be carried without difficulty to Tientsin." Then comes the question What does this revolution in transport involve? It would bring Europe within a few days of Peking. Taking the normal rate of speed on Russian railways, Peking should then be within eight days of St. Petersburg. This would mean little more than ten days from London to Peking, instead of thirty! I copy entire the following pregnant sentence:

"It can hardly be necessary to add that such an event would be fraught with tremendous consequences to both East and West, to the growth of civilization, to the amount and the conditions of travel, to the course and the incidence of trade, to the balance of power in the East, and to many other matters that hang upon the abridgement of time and space, and the bringing more closely together of the progressiveness of the Occident with the conservatism and stagnation of the Orient."

The writer then discusses the probable effect such a development of the Russian railway system would have on the future commercial relations between China and Great Britain. It will not be this generation that will be called upon to face the grave possibilities involved. At the present time the "United Kingdom supplies China with imports four times as much in value as those furnished by the whole of the rest of Europe." In the ten years preceding and up to 1894, the direct imports from this country to China have almost doubled. And when we take into account the enormous cost of transport of merchandise by rail, as compared with that of seaborne traffic, it will be seen the merchants of HongKong have not much to be afraid of. The first effect on the volume of our trade would only be in respect of certain descriptions of goods, not carried in large quantities, and which Russia, ever rapidly extending her industrial resources, would not be insensible to. There is another aspect of this question to be looked at. Between Vladivostok and Nagasaki there is a distance of only about 600 nautical miles. So that allowing a travelling speed of 35 versts an hour, London would be brought, for passengers, within 16 days for Japan, and 17 for China. At present, the most rapid route is that taken by

Li Hung Chung on his return journey, by way of the Atlantic and the Canadian Pacific line, involving a journey of 12,800 nautical miles, and requiring 28 days to reach Japan, and 30 days to China. The final sentences of this important communication to the "Times" cannot be abridged, emphasizing as they do the description I gave above of the vigilant continuity of Russian policy.

"Although it is of no real consequence, as bearing on the questions that have been discussed in this article, it may be pointed out here that the Russians have not now for the first time realized the importance of establishing railway communication with Peking. On the contrary, it is an old Russian hobby, and one that assumed practical shape as far back as 1858, when Sofronov, a Russian engineer, submitted a plan to construct a line from Saratof across the Kirghiz plains to the Amur and Peking. This line was never carried beyond the paper stage, but it has been more or less in the minds of Russian statesmen and engineers ever since, and it is probable that the pending journey to America and England of Prince Khilkoff, the Russian Minister of Ways and Communications, has to do directly with the extension of the Trans-Siberian line in the direction and for the purposes that we have indicated, although its object is said to be to "study the improvements in railway construction and working recently introduced."

Madagascar. As soon as the Chamber of Deputies meets, we may look for some stirring scenes over the present state of things in this the latest of French acquisitions. The correspondent of the Paris "Temps," writing a month ago from Antananarivo, says: "The situation becomes worse and worse daily, and the extent of the insurrectionary movement is very considerable." Our own "Times" says the "disturbances are chaotic rather than insurrectionary." Our Government has never thwarted the French in carrying out their policy towards Madagascar, when veiled in the first instance as a "protectorate" to be subsequently transformed into an "annexation." "It was expected, at the least, that when Madagascar was formally incorporated in the dominions of France a *minimum* of security not less than that enjoyed under the Hovas might be counted upon." The result up to now has been far otherwise. There is "complete social chaos." Europeans cannot venture outside the protection of the French army of occupation without running the risk of being maltreated and even murdered. Now, weak and unstable as the Government of the Hovas was, it had a certain ascendancy of a legitimate and effective character over "native tribes of a lower type." The real question as between French politicians comes to be, Should France have been content with a "protectorate"? The unquestionably able Minister who controls the foreign policy of France, M. Hanotaux, was himself, when out of office, a strong advocate for being content with a protectorate. It is barely six months since M. Hanotaux described M. Bourgeois' (then Prime Minister) policy of annexation as "illogical and absurd." But "in" and "out" of office are two very different things, as we know well enough in our own House of Commons. When M. Hanotaux's sudden conversion took place he had even then the candour to admit the "inconveniences and dangers of every sort which would result from a too direct intervention in the affairs of the country."

Instead of governing through the authority (ill-balanced and defective as it was) of the ruling Hova caste, France has attempted, in M. Hanotaux's own words, to "carry into an imperfectly civilized country the traditions and habits of a rigid and inelastic bureaucracy." As a result, anarchy prevails and French observes demand "consistent, steady, and well considered military action." The "Times" remarks "order must be restored throughout the island by the energetic employment of military force, whatever the cost, direct or indirect, may be." Months ago, M. Berthelot protested against annexation, on the ground that "it would involve enormous expenses and responsibilities which were impracticable." Experience proves he was entirely in the right and France may well deplore M. Hanotaux's fatal conversion. It will be remembered when the late Sultan of Zanzibar died suddenly and mysteriously a few weeks ago, pressure was brought to bear on Lord Salisbury to adopt at once the French policy in Madagascar. But our Foreign Office traditions and Lord Salisbury's own long experience and firmness of will, at once recognized the legitimate successor. It is true, treaty obligations with France and Germany somewhat tied his hands, but these Powers would not have stood in Lord Salisbury's way, had he deemed it indispensable to resort to annexation instead of maintaining the *status quo ante*. Without any boasting, both France and Germany have much to learn from Great Britain as a colonizing Power.

Samoa. Since the death of R. L. Stevenson, we have been deprived of his occasional letters to the "Times" from his island home at Apia. They were always full of interesting matter, written with his rare literary touch, and gave an animated description of passing events. For long I have failed to see any reference in the public prints to the state of affairs in these far off islands, but only very recently the American Consul-General at Apia Mr. Mulligan, has furnished his Government with an exhaustive report on the "political and commercial condition of the archipelago." You will remember, seven years ago, Germany, Great Britain and the United States

agreed upon a common basis of action, embodied in what is known as the "Berlin treaty for the administration of Samoa." Mr. Mulligan describes the treaty as "an utter, unrelieved failure, an injustice to the United States, and a great wrong to the people of Samoa." In reading the following words, one would suppose that the condition of the Samoan group was, in miniature, not unlike the present state of things in Cuba. "The treaty sought to provide a form of government, to adjust differences, to give peace; but, two wars, almost five years of rebellion, waste, stagnation, and almost general if not always aggressive, rebellion, marked by two years of active hostilities, have been added since the treaty was proclaimed." And Mr. Mulligan does not spare the terms of the treaty in themselves as most discreditable to the three great civilizing Powers concerned. "It was full of detail where detail could but hinder, limit, and embarrass, and imposed a complicated, ill defined, and imposed a complicated, ill-defined, and involved system of government on about 30,000 people, already over-governed. Fairly efficient administration cannot be had in the absence of reasonable harmony of policy and interest; yet here, between all parties is a certain degree of diversity of policy, conflict of interests, and clash of rights. Each of the Powers must be more or less influenced by what it considers its immediate rights and ultimate interests." And the conclusion of the whole matter as put by Mr. Mulligan is that the United States should have the Berlin treaty abrogated, as, in such case, "they would lose nothing, and much would be gained by the Samoans."

The United States in the throes of a Presidential election are not likely to have much time to think of Samoa, especially as its foreign interests must at present be absorbed by the affairs of Turkey and of Cuba. But, what an indictment both of Germany and Great Britain! To the latter Apia is all important as a place of call on the high sea road between San Francisco, New Zealand and Australia.

AN INDESCRIBABLE SENSATION.

To be easily described a thing must have clear outlines and unmixed colours. In other words it must be simple. A rent in one's clothing, a boil on one's body, a tumble while walking, the shape of a box, &c., are easily set forth in words. On the contrary the complex and comprehensive things puzzle the mind and take the meaning from language.

It was for this reason that Miss Sabina Mitchell, alluding to an experience of illness, says: "At this time there came upon me an *indescribable* sensation. It was as if the power of life were going to fail me, and I should sink down without help, as a stone sinks in water. Yet in saying this I convey no adequate idea of the nature of that feeling. I hope I shall never have it again."

"The illness which led to it began in the spring of 1892. My health appeared to give way all at once. I found myself tired, heavy, and feeble. My appetite was poor, and after eating I had much distress at the stomach and pain at the chest and sides. My strength gradually declined and I became very low, weak, and nervous; and it was *when in this condition* that I felt the indescribable sensation I have spoken of."

"I soon became so depressed in body and mind that it was with great labour and strain that I attended to my business. I was extremely downhearted and feeble, and none of the many medicines I tried did me any real good. In December 1892, Mother Seigel's Syrup was recommended to me, and I began using it with, I confess, small confidence. But after having taken it for a few days I felt wonderful relief. My appetite improved, and eating no longer gave me pain. A short time afterwards the Syrup proved its value in the matter of my disordered nerves. The nervousness disappeared with my increasing strength. Nowadays, whenever I need any medicine, a few doses of Mother Seigel's Syrup quickly set me right. Having had so convincing an experience of what it can do, I recommend it to all my friends and customers. You can make such use as you like of this letter. (Signed), (Miss) Sabina Mitchell, Marcham-le-Fen, Boston, Linco, May 17th, 1895."

"In March, 1892," writes another lady, "my health began to give way. I had lost my energy, and was languid and heavy in feeling. I had a sense of faintness and dizziness that was almost constant, and occasional spells of sinking which I cannot describe. Hot and cold flushes came over me, my mouth tasted badly, and after eating I had a feeling at the chest like the pressure of an actual load upon it. I never seemed rested, and awoke in the morning more tired than when I went to bed. I was also much troubled with wind or gas from the stomach, and raised a sour, biting fluid."

"In this manner I continued to suffer for nearly two years, no medicine that I took giving me any relief. In January, 1894, I got a small book and read in it of cases like mine having been cured by Mother Seigel's Curative Syrup. I immediately procured the medicine from Boots' Drug Stores, and after taking it about ten days felt much better. I could eat something nourishing without any pain following. I kept on with the Syrup and was soon in my former good health once more. You have my permission to make this statement public. (Signed) (Mrs.) Ann Shaw, 174, Barnsley Road, Batsmoor, Sheffield, March 8th, 1895."

Touching the "*indescribable sensation*" alluded to by both ladies, an eminent medical author says: "It is syncope without the loss of consciousness. The sufferer has the keenest realization of the bitterness of dissolution. I have seen stalwart men unnerved and shaken by such experiences till they trembled like aspen leaves."

The cause is an acid poison in the blood produced by indigestion or dyspepsia. The remedy is to purify the blood with Mother Seigel's Syrup, and to tone the stomach in the same way. Use the Syrup on the approach of the earliest signs of weakness.

Sir George Chesney Memorial Committee.**CHAIRMAN :****General Sir Henry W. Norman.****MEMBERS :**

The Marquess of Lansdowne, Field Marshal Lord Roberts, Mr. George Allen, Colonel Sir J. Ardagh, Sir Stuart Bayley, Mr. William Blackwood, Sir Edward Braddon, Rev. A. G. Butler, Colonel Sir G. S. Clarke, General Sir E. Collen, Sir Auckland Colvin, Sir Fuland Danvers, General C. H. Dickens, Sir Mortimer Durand, General Sir W. Stirling Hamilton, Captain Hext, R. N., Mr. A. P. Howell, Sir W. W. Hunter, Lieut.-Genl. McLeod Innes, General Sir Allen Johnson, Sir H. S. King, M. P., Mr. A. Lawrence, General Sir R. Low, Sir Alfred Lyall, General Sir O. Newmarch, Sir Andrew Scoble, Field Marshal Sir Lintorn Simmons, Field Marshal Sir Donald Stewart, General R. Strachey, General Sir A. Taylor, Mr. Meredith Townsend, Mr. W. C. Unwin, General Sir George White and General Sir E. Williams.

Memorial**TO THE LATE****SIR GEORGE CHESNEY, K.C.B., R.E., M.P.**

A Meeting was held, on the 24th April, at the Royal United Service Institution, of some of the friends of the late Sir George Chesney, to consider the question of the commemoration of his distinguished services as Soldier, Administrator, Statesman, and Author. General Sir Henry Norman presided, and was supported by Field Marshals Sir Lintorn Simmons and Sir Donald Stewart, and other friends of Sir George Chesney. To carry out the object of the Meeting, a General Committee was formed, which included the gentlemen then present, and in addition, the Marquess of Lansdowne, Field Marshal Lord Roberts, General Sir George White, Sir Andrew Scoble, Sir Alfred Lyall, Sir H. S. King, Sir W. W. Hunter, Mr. Meredith Townsend, General Richard Strachey, Mr. William Blackwood, and others.

The form the Memorial should take was left for the future consideration of the Committee, as it would depend on the amount subscribed, but the suggestions tended towards a bust of Sir George for the India Office, and a medal for valuable contributions to Military Literature. It was resolved to limit each subscription to a maximum of three guineas.

Subscriptions will be received by Lieutenant-General McLeod Innes, 9, Lexham Gardens, Cromwell Road, London, W.

COMMITTEE FOR INDIA :

His Excy. General Sir George White, V. C., G. C. I. E., K. C. B., the Hon'ble Major-General Sir E. Collen, K. C. I. E., Lieutenant-General Sir W. S. A. Lockhart, K. C. B., K. C. S. I., His Excy. Lieutenant-General Sir C. Mansfield Clarke, K. C. B., Major-General J. Duncan, Major-General G. E. L. S. Sanford, C. B., C. S. I., Major-General G. de C. Morton, C. B., Major-General A. R. Badenock, C. B., C. S. I., Brigadier-General W. G. Nicholson, C. B., Captain J. Hext, C. I. E., R. N., Colonel W. S. S. Bisset, C. I. E., R. E., Colonel T. Deane.

Honorary Secretary :
Colonel T. Deane,
Simla.

Subscriptions will be received, in India, by Messrs. King, King & Co., Bombay ; Messrs. King, Hamilton & Co., Calcutta ; and by the Alliance Bank, Simla, and its branches at Calcutta, Cawnpore, Agra, Ajmere, Darjeeling, Lahore, Murree, Mussoorie, Rawal Pindi and Umballa. Subscriptions are limited to a maximum of Rs. 32 in India.

By order of the Committee,
T. Deane, Col.,
Hony. Secy.

Simla, 18th July, 1896.

POSTSCRIPT.

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Uckoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Bibington Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, K.C.I.E., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Samuho Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindoo Patriot*, in its palmiest days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his life and letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness.—*The Muhammadan*, (Madras) Oct. 5, 1895]

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unfailing instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Rulwiv, from Ceylon says:—It keeps soiled time and never stopped although it sustained hard knocks and jerks. x Dr. H. Moore of Royal Artillery from Poonamallee says:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Darnham says:—I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—The watch you sent me some seven years ago is still keeping very good time.

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Re. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Re. 1-8-0. Mr. G. Smith, Salt Inspector from Sanikutia, says: "A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Purandhar says:—For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28. x Pte. H. C. Bishop of L. F. L. Regt. from Kumbhee says:—A Corporal offered Rs. 30 for the very same watch. Gentlemen's open faced, keyless *real solid gold watch* Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH.

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A. HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada. *Scientific American*.

CALCUTTA, SATURDAY, OCTOBER 17, 1896.

WHOLE NO. 247.

THE FAY AND THE PERI.

(From the French of Victor Hugo.)

THE PERI.

BEAUTIFUL spirit, come with me
Over the blue enchanted sea ;
Morning and evening thou canst play
In my garden, where the breeze
Warbles through the fruity trees ;
No shadow falls upon the day ;
There thy mother's arms await
Her cherished infant at the gate
Of Peris I the loveliest far—
My sisters, near the morning star,
In ever youthful bloom abide ;
But pale their lustre by my side—
A silken turban wreathes my head,
Rubies on my arms are spread,
While sailing slowly through the sky,
By the uplooker's dazzled eye
Are seen my wings of purple hue,
Glittering with Elysian dew
Whiter than a far-off sail
My form of beauty glows,
Fair as on a summer night
Dawns the sleep-star's gentle light ;
And fragrant as the early rose
That scents the green Arabian vale,
Soothing the pilgrim as he goes.

THE FAY.

Beautiful infant (said the Fay),
In the region of the sun
I dwell, where in a rich array
The clouds encircle the king of day,
His radiant journey done.
My wings, pure golden, of radiant sheen
(Painted as amorous poet's strain),
Glimmer at night, when meadows green
Sparkle with the perfumed rain
While the sun's gone to come again.
And clear my hand, as stream that flows ;
And sweet my breath as air of May ;
And o'er my ivory shoulders stray
Locks of sunshine ;—tunes still play
From my odorous lips of rose.

Follow, follow ! I have caves
Of pearl beneath the azure waves,
And tents all woven pleasantly
In verdant glades of Faëry.
Come, beloved child, with me,
And I will bear thee to the bowers
Where clouds are painted o'er like flowers,
And pour into thy charmed ear
Songs a mortal may not hear ;

Harmonies so sweet and ripe
As no inspired shepherd's pipe
E'er breathed into Arcadian glen,
Far from the busy haunts of men

THE PERI.

My home is afar in the bright Orient,
Where the sun, like a king, in his orange tent,
Reigneth for ever in gorgeous pride—
And wafting thee, princess of rich countree,
To the soft flute's lush melody,
My golden vessel will gently glide,
Kindling the water 'long the side.
Vast cities are mine of power and delight,
Lahore laid in lilies, Golconda, Cashmere,
And Ispahan, dear to the pilgrim's sight,
And Bagdad, whose towers to heaven uprear ;
Alep, that pours on the startled ear,
From its restless masts the gathering roar,
As of ocean hamm'ring at night on the shore.

Mysore is a queen on her stately throne ;
Thy white domes, Medina, gleam on the eye—
Thy radiant kiosques with their arrowy spires,
Shooting afar their golden fires
Into the flashing sky,—
Like a forest of spears that startle the gaze
Of the enemy with the vivid blaze.

Come there, beautiful child, with me,
Come to the arcades of Araby,
To the land of the date and the purple vine,
Where pleasure her rosy wreaths doth twine,
And gladness shall be alway thine ;
Singing at sunset next thy bed,
Strewing flowers under thy head.

Beneath a verdant roof of leaves,
Arching a flow'ry carpet o'er,
Thou mayst list to lutes on summer eves
Their lays of rustic freshness pour ;
While upon the grassy floor
Light footsteps, in the hour of calm,
Ruffle the shadow of the palm.

THE FAY.

Come to the radiant home of the blest,
Where meadows like fountain in light are drest,
And the grottoes of verdure never decay,
And the glow of the August dies not away.
Come where the autumn winds never can sweep,
And the streams of the woodland steep thee in sleep,
Like a fond sister charming the eyes of a brother,
Or a little lass lulled on the breast of her mother.
Beautiful ! beautiful ! hasten to me !
Coloured with crimson thy wings shall be ;
Flowers that fade not thy forehead shall twine,
Over thee sunlight that sets not shall shine.

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

The infant listened to the strain,
Now here, now there, its thoughts were driven—
But the Fay and the Peri waited in vain,
The soul soared above such a sensual gain—
The child rose to heaven,

—*Asiatic Journal*.

WEEKLYANA.

THE salary of the President of the Republic of Andora, in the Pyrenes, is — £3 a year.

HERR KRUPP, the gun-maker, is said to be the richest Prussian subject. He is taxed on an income of 7,135,000 marks, or half the crown donation which the emperor gets as King of Prussia. The next richest is Baron Rothschild. Count Hutten-Czapskia, Captain of the 14th Hussars, comes after him with an income of 3,085,000 marks, paying a tax of 123,400 marks. Only seven persons have incomes over 2,000,000 marks, and thirteen between 1,000,000 and 2,000,000 marks.

ACCORDING to a statistician, the average Englishman consumes £62 worth of food per year; Germans and Austrians £54; Frenchmen £53; Italians £27 and Russians only £24. As regards consumption of meat, the English-speaking nations also head the list, with 128 pounds of meat a year per capita of the population; the Frenchman consumes 95 pounds; the Austrian 79; the German 72; the Italian 52; the Russian 50. The ratio of consumption of bread is reversed, thus: the Englishman eats 410 pounds a year; the Frenchman 595; the Austrian 605; the German 620; the Spaniard 640; the Italian 660; the Russian 725.

What about the Indians, perhaps the least fed of all the nations in the world. Their average diet is no more than £7 a year. A high Bengali, high in Her Majesty's service, once assured a Governor that food did not cost him more than Rs. 10 a month.

ELLEN SWEENEY, of Swansea, is dead. A remarkable woman, she died in the workhouse where she had been sent on the 280th conviction for drunkenness. She was 56 years of age, two-thirds of the last 30 years of which she spent in jail or in the workhouse for drunkenness and disorderly conduct. The most prominent of a trio of female habitual drunkards, she figures in a group of photographs taken by the police — with "Mad Maggie" with 182 convictions and Sarah Norman with 106. An English paper remarks: "Convicted first while in her teens, the remarkable career of the deceased, a fresh conviction often occurring within an hour or so after a discharge from prison, is a blot on our jurisprudence. It is a record of failure, curative and deterrent, and unhappily it is but a type of many other similar cases which have appeared mostly in the 'weaker sex.'"

MR. Justice Strachey and Mr. Justice Badrudin Tyabjee, of the Bombay High Court, having been bracketed together for a Bench, the first question that arose and on which they could not agree was—Who was the senior Judge? The native Judge claimed precedence, since, as he argued, his appointment as acting Judge was made first, and that the confirmation of his appointment by the Home Government simply continued him in his seat on the Bench. Mr. Strachey contended that as the Letters Patent appointing him Judge were issued before those conferring the same honour on his Mahomedan colleague, he was entitled to precedence, and that the priority of the acting appointment did not affect the question of seniority. The difference being reported to the Chief Justice, he decided in favour of Mr. Strachey.

THE *Bombay Gazette* says:—

"Mr. H. Wynford Barrow, the Municipal Secretary, will on his retirement next year, be entitled to a pension of Rs. 5,000 per annum. Mr. Barrow having applied for a gratuity at the time of his retirement, the Municipal Corporation some days ago appointed a committee to take the matter into consideration and submit a report thereon. The committee have, we learn, come to a unanimous decision that, in consideration of Mr. Barrow's long, faithful, and zealous services, he should be granted a gratuity of Rs. 20,000, in addition to his pension."

The Calcutta Secretary, Mr. Robert Turnbull, has been equally, if not more, fortunate. He drew in pay and allowances Rs. 1,200 or Rs. 200 more than the pay of the Vice-Chairman. When Mr. Turnbull went on leave preparatory to retirement, the Commissioners decided upon a pension of Rs. 500, and since his retirement he is being paid at the rate of Rs. 600 a month, or nearly the amount of his pay.

THE Revd. M. M. Carleton reports in the *National Magazine* the following results of experiments made in horticulture at Ani, a village at 4,500 feet in Kulu sub-division, 65 miles from Simla:

I.—First experiment in apple cultivation. After ten years the whole experiment has proved well nigh a failure. American apple trees, as well as English, are not prolific in this climate at 4,500 feet. A few apples were obtained, and the growth of the trees has been all that could be desired, but apples brought from England and Scotland, or from the Northern part of the United States and Canada, will not be profitable below 6,000 feet. As an example of one variety, I introduced the Porter apple tree from New England, a standard apple for the last 50 years, both in Canada and New England. The trees grew finely, they are the finest in my orchard. They are now 8 years old, but they have never produced even a blossom. This result is the same when trees from New England and Canada are transferred to the Southern States, especially Florida; they grow well, but never produce fruit.

II.—Experiment No. 2 with Kashmir apricots has proved a remarkable success. The native apricot in this warm valley was not prolific, and, from analogy, we concluded that the place was too warm for the Kashmir or English variety. We, however, introduced ten trees from the Government Garden at Lahore. They grew very vigorously, and began to bear fruit the fourth year. They are even more prolific than the native variety in Kulu valley. The fruit ripens about the 15th or 20th of June. I should advise the extensive cultivation of the Kashmir and English apricot in all the lower hills. The successful introduction of the famous Kashmir American fruit-drying machines into Simla would enable enterprising persons to establish a very profitable industry in preparing dried apricots for the Indian markets.

III.—Experiment No. 3 with American grapes has proved an unqualified success. My first experiment, made 15 years ago, was with grapes from the Government Gardens of Lahore. The variety was called the Black Hamburg. After 12 years' experiment they proved an utter failure, scarcely a single cluster of grapes in the 12 years. About nine years ago I sent to America for a variety of hardy prolific grape grown on the northern limit of grape cultivation where the spring opens in May, and frost comes in September. I held the opinion that such a variety would ripen in July before the heavy rain, because the spring opens the last of February, or the 1st of March. My experiment proved that the American grape in these lower hills is a great success. Only one vine lived of those I first received, that is about 8 years old and now, to-day (May 7), there are about 70 lbs. of green grapes on the vine. A few such vines around the houses of intelligent zemindars in the Simla District would give a handsome return especially in the Simla market in the month of July.

IV.—Experiment No. 4 with the common Himalayan walnut is also a success. Very fine large trees in ten years and very fruitful.

In 35 years a grand change in the use of the walnut has taken place. In former times in Kashmir, Coochab and Kulu, the only use of the fruit was the production of oil to adulterate ghee. But now the demand for walnuts in the plains is greater than the supply. On account of the valuable timber the cultivation of the walnut should belong to the Department of Forestry. But in California the horticulturist has captured the species, on account of its valuable fruit. They have introduced the celebrated Persian walnut, and find it one of the most profitable fruit trees. We are surprised that the Department of Forestry have done little or nothing with the walnut in the Simla District.

V.—Experiment No. 5 with the European orange has proved that the variety commonly called the Maltese orange can be grown in the lower hills as high up as 4,500 feet. In California orange cultivation is extending up the rich valleys of the Pacific slopes, and I see no reason why in these lower hills, orange cultivation should not be a success. This year, from one tree eight years old, we gathered 220 oranges. They were of the crop of last year, but they were taken from the tree, February 25th. We follow the custom in California and Florida and keep the fruit on the trees till the new leaves appear, the last week in February. We have noticed one remarkable fact in this connection. In the winter of 1890-91 we had two snowstorms, the snow began to fall in the night, and it remained on the orange leaves till 8 A.M. next morning. I could not discover that the fruit was in the least injured though after the snowstorm the leaves most exposed were somewhat injured. The crop of oranges should be gathered about 1st of March, and kept in a dry, suitable place till the season opens in Simla. I learn that oranges sold from the Government Garden in Gujranwalla, and other gardens, usually fetch from 5 to 8 rupees per hundred, and it is quite certain that Maltese oranges sent to the Simla market in April, when there is a little fruit for sale, would fetch 8, and perhaps 10 rupees per hundred. An orange tree 8 years old that gives an annual crop of over 200 oranges could give the owner a profit of 16 rupees, and that on only 10 feet square of ground.

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS 19, SOUTHAMPTON BUILDINGS, HOLBORN, LONDON.

NOTICE.

AS in previous years, on account of the Durga Puja holidays, there will be no issue of *Reis and Rayyet* for two weeks, that is, on the 24th and 31st October. The next number will appear on the 7th November.

NOTES & LEADERETTES,
OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH
OCCASIONAL COMMENTS.

REUTER'S agency is informed that the cruiser Gibraltar has been despatched from the Mediterranean Squadron for service at Zanzibar. It is understood that the naval re-inforcements for Zanzibar are connected with Sud Khalid's fight. The Zanzibar affair is regarded as serious owing to the hostile attitude assumed by Germany.

THE Russian Press state that the toasts at the Elysée amount to the confirmation of a definite alliance between France and Russia for their mutual security and the protection of the peace of Europe. The French press attach the greatest importance to the visit of the Tsar and Tsarina to Versailles as being emblematic of purifying it from the pollution attaching to the place after the proclamation of the German Empire there. A grand review of seventy thousand troops was held at Chalons, on October 9, before the Tsar and President Faure. The spectacle was a most inspiring one, and the troops looked splendid. The Tsar replying to the toast at luncheon which followed the review, said the two countries were bound by unalterable friendship, and their armies were united by profound sentiment and comradeship. The Tsar departed for Darmstadt the same day. The French and Russian press agree that the utterances of the Tsar while in France consecrate the Russo-French alliance. The Czar from the French frontier telegraphed to President Faure that he felt the heart of France beating in the beautiful capital, and that the memory of the visit is deeply engraved on the heart of himself and the Czarina.

LORD Rosebery, speaking at Edinburgh, said he felt unable to sacrifice the interests of his country to personal ambition, and he, therefore, resigned the leadership of his party. The character and extent of the Armenian outrages, he said, raised the whole Eastern question and partial remedies were futile and dangerous. He was unable to assent to Mr. Gladstone's proposals, which were the proximate cause of his resigning. In conclusion, Lord Rosebery said he would fight tooth and nail against the isolated intervention of Great Britain in the East, which would involve a European war. He emphasized the absence of explicit support from his colleagues which was especially essential when the leader of the party was a Peer. He virtually designated Mr. Asquith as his successor. Mr. Asquith, who was present, spoke deploring Lord Rosebery's resignation, and a resolution was adopted urging him to reconsider his decision. The general tendency among the Liberals seems to be in favour of leaving the leadership of the party unfilled for the present. In a speech made by Mr. Asquith, he regretted that a passage in Lord Rosebery's speech at Edinburgh should have been misinterpreted, as indicating his preference regarding his successor.

THE Archbishop of Canterbury, who was Mr. Gladstone's guest, was seized with a fit of apoplexy in Hawarden Church on October 11, and was carried to the Rectory where he died. He sank to the ground while the Rev. Stephen Gladstone was reading the Absolution.

IT is now believed at Rome that the Tunisian treaty has been imposed upon Italy and therefore the Franco-Italian hostility remains unabated. The possibility, however, is being discussed of Italy joining France to compel England to evacuate Egypt, and to establish Franco-Italian supremacy in the Mediterranean. The reports are discredited on good authority, and it is not believed that Italy will join any understanding directed against England for the evacuation of Egypt.

THE *Novæ Vremya* says that the change of tone displayed by England will materially facilitate united European action in regard to the Porte.

PREPARATIONS at Calcutta to meet the dreaded visitor have not been too early. At the end of last week, it was reported that plague had overtaken Howrah, brought from Bombay by a Goanese named James Cotta. At any rate, it was certified by Drs. Cobb, Simpson, and Tomes that he was "suffering from fever with glandular enlargements of the groins" and that his disease was "bubonic plague of the mild ambulatory form (*pestis ambulans*). Such is the dread of the disease that, while the three doctors recommended Cotta's removal to hospital, many would not accept the certificate. They are inclined to think that Cotta is the victim of his own youthful indiscretions and that his disease is no more than ordinary inguinal swelling. Since then, however, a number of cases have been discovered in Calcutta. On Tuesday, the *Englishman* reported:

"No fewer than four cases of what is said to be the veritable Bubonic plague have been reported to Dr. Simpson, the Health Officer of Calcutta. Three of these, one a European girl, residing at Chatterwallah Gully, and the other two, being native lads, aged about 15 years, residing, respectively, at Jinn Bazar Street, and a lane off Elgin Road, near the South Suburban Hospital, are said to be suffering from the plague. The girl is seven years old. Last Friday she was taken to the Chaudney Hospital suffering with enlarged glands and fever, with a temperature of 102 degrees. Her case being pronounced to be suspicious she was taken on Sunday morning to the Medical College Hospital. Here also her case appeared suspicious, and the matter was reported to the police, who communicated with Dr. Simpson, the Health Officer. Dr. Simpson, Dr. Cobb, and another doctor thereupon proceeded to the residence of the girl. She was examined carefully, and pronounced to be suffering from the plague. Some blood was extracted for bacteriological analysis. Dr. Simpson directed the removal of the girl to the Manicktolla Isolation Hospital, but her father has objected, and so the girl is still under his roof. Her father has also been warned by the Health Officer not to attend office till the infection has been stamped out of his house.

An East Indian personally reported himself to the police saying that he thought he was suffering from the plague, but on examination by the Health Officer it was found not to be the case. A native lad aged about 14 years, residing near the South Suburban Hospital, in a lane off Elgin Road, came under the observation of Dr. Simpson on Saturday night. As he was found to have the plague, he was removed that same night about 10-30 P.M., under the orders of the Health Officer to the Manicktolla Isolation Hospital.

Another case was reported yesterday morning. In this case the patient is an up-country native lad, aged about 14 or 15 years. He resides at a grand dhopot situated in Jinn Bazar Street, which is in front of the thannah. This lad was found to be suffering from high fever with a temperature of 106 degrees and delirium. He had a swelling of the glands, accompanied by pains all over the body. He has also been removed to the Isolation Hospital at Manicktolla."

These reports reaching Dujeeing, Sir Alexander Mackenzie, who was still hesitating, at once made up his mind and issued the following order:

RESOLUTION NO 937F. -M., DATED 10TH OCTOBER 1896.

"In the Government letter No 775F. -M of the 30th September, (published in R & R. of the 3rd Oct.), copy of which is annexed to this Resolution, the Corporation of Calcutta were addressed on the subject of the reported outbreak of plague in Bombay, and it was suggested that the following measures should be taken under sections 321 to 334 of the Calcutta Municipal Act:—

- (1) To declare bubonic plague or any form of typhus fever with glandular swellings to be a dangerous disease, regarding any case of which information should at once be communicated to the Commissioners or then Health Officer under section 321.
- (2) To select a site for a temporary Plague Hospital away from the main thoroughfares, and to arrange for its prompt erection should the need arise.
- (3) To provide special carts for the conveyance of cases to Hospital, and to arrange for the disinfection of both carts and drivers.
- (4) To divide the Town into Sanitary Circles of manageable size, and to place in charge of each a Medical Inspector with full powers to carry out the measures ordered by the Commissioners or Government for preventing the spread of the disease.
- (5) To draw up Regulations under section 334 of the Act, in order to give effect to such special measures as might be necessary to prevent, check or mitigate an outbreak of plague.

The Corporation were further informed that the Government would be prepared to appoint a Medical Board to assist the Corporation in devising measures to deal with the disease.

2. While trusting that no necessity for the above measures would arise, the Lieutenant-Governor expressed his entire approval of the steps taken under the Commissioners' orders to give special attention to the cleaning and sanitation of Calcutta. A copy of the letter was sent to the Commissioner of Burdwan, who was directed to instruct the Magistrate of Howrah to move the Municipality to take the necessary action to cleanse and sanitize the town.

3. A case of mild bubonic plague is now reported to have occurred in Howrah, the patient being a Eurasian lad of 17, who arrived from Bombay on the 26th September, and is believed (though this is not certain) to have brought the disease with him. It may be hoped that the case is an isolated one, and that no general outbreak of the disease will take place. But the occurrence of even a single case in a crowded area

where the sanitary conditions are such as to favour the spread of contagion, if not actually to generate the disease, convinces the Lieutenant-Governor that the time has now come to adopt further preventive measures.

4. It has accordingly been decided to appoint the following gentlemen to form a Medical Board for the purpose of determining the action to be taken by all executive authorities, whether official or municipal, with the object of preventing and checking the plague throughout Bengal :—

President.

Hon'ble H. H. Risley, C.I.E., Secretary to Government, Financial and Municipal Departments.

Members.

Hon'ble P. Playfair, C.I.E.

Hon'ble J. G. H. Glass, C.I.E., Chief Engineer.

Surgeon-Colonel Ross, Inspector-General of Civil Hospitals.

Surgeon-Captain Dyson, Sanitary Commissioner.

Dr. Mahendra Lal Sircar, C.I.E.

Secretary.

Surgeon-Captain Robson-Scott, Officiating Deputy Sanitary Commissioner, Presidency Circle.

5. All cases of illness which are believed to be plague should at once be reported to the Board by the Magistrate of the district where they occur, and in Calcutta by the Health Officer of the Corporation. The orders issued by the Board on matters affecting health and conservancy should be deemed to be the orders of Government and carried out with all possible despatch by all executive authorities. Steps will hereafter be taken, if necessary, to legalise all action taken during the present emergency. Nothing should meantime prevent the Board from ordering, or the executive authorities from carrying out, any reasonable measure of precaution, segregation or disinfection which may appear called for.

6. The areas which the Board will have in the first instance to deal with in order to arrest the spread of the plague, are the following :—

- (1) The Town of Calcutta.
- (2) The Port of Calcutta.
- (3) The Municipality of Howrah.
- (4) The small Municipalities adjacent to Calcutta and Howrah.
- (5) The lines of railway.

7. *The Town of Calcutta.*—The plague has already been declared to be a dangerous disease under section 321 of the Municipal Act, and it is further understood that the measures indicated in the Government letter of 30th September have already been adopted, or are in course of adoption by the Corporation. The Commissioners have asked the Government to select for them a Chief Superintendent to organise and control the conservancy and nuisance branch of the Health Department for three months on a salary of Rs. 1,000 a month. Dr. Banks, Civil Medical Officer of Port, who possesses in a high degree the requisite qualifications, has been appointed to the post, and directed by telegram to join at once. Sites have been selected in Maniktola for an isolation hospital and a special burning-ghat and burial-ground for plague patients. The Town is being divided by the Health Officer into Sanitary Circles, and Regulations under section 334 of the Act are about to be submitted for the sanction of Government. The Lieutenant-Governor feels sure that the Commissioners, the Executive Officers of the Corporation, and their subordinates will work cordially with the Medical Board and carry out promptly and fully all the recommendations of that body.

8. *The Municipality of Howrah.*—The Chairman of the Municipality has been instructed by telegram to isolate the patient now suffering from the plague, to destroy his clothes, and to disinfect the house in which he has been living. The Municipality have asked by telegram for the appointment of an officer of the rank of Surgeon-Captain as Health Officer of the town on a salary of Rs. 1,500 a month and carriage allowance; but the Lieutenant-Governor considers that the needs of Howrah can best be met by transferring the present Civil Surgeon, who is in weak health, to a lighter station, and deputing a younger officer, Surgeon-Major Walsh, to carry on the combined duties of Civil Surgeon and of Health Officer with the assistance of an experienced supervisor of the Public Works Department, who will receive Rs. 500 a month with horse allowance and house rent. The Deputy Sanitary Commissioner of the Western Circle was ordered to Howrah to assist in sanitary measures two days before the case of plague was reported to Government.

9. *The adjacent Municipalities.*—The Chairmen of the Municipalities noted in the margin* should now report to the Medical Board, through the Magistrate of the district, what steps they propose to take to prevent the plague spreading to their jurisdictions. The Deputy Sanitary Commissioners will be directed to visit these Municipalities as soon as possible, and to explain to the Chairmen personally what ought to be done.

10. *The Port of Calcutta.*—The Government of India have been moved by telegram to sanction the introduction, with such modifications as may be necessary, of the revised rules for quarantine against plague which were introduced in August 1894 for the protection of Calcutta from the importation of plague from Hongkong. It has also been suggested that under section 19 of the Sea Customs Act the export of rags and second-hand clothing from Bombay should be prohibited. Steps are being taken to provide accommodation for plague patients near the quarantine anchorage at Diamond Harbour, and all suspected vessels will be carefully examined and disinfected by the Port Health Officer before communication with the shore is permitted.

11. *The lines of Railway.*—Under section 71 of the Railway Act IX of 1890, a railway administration may refuse to carry persons suffering from any infectious or contagious disease, and under section 117 any

such person may be removed by a railway servant from the carriage in which he is travelling. On the 1st October, the Governor of Bombay was asked by telegram whether, in event of the disease increasing, he would be prepared to move the Railway Company to prevent suspected persons from leaving Bombay by rail; and on the next day, His Excellency replied that the Municipal and Railway authorities were in consultation, and that if the disease increased the necessary measures would be taken. The East Indian Railway have already posted native doctors at A-ansol, Allahabad and Tundla to scrutinise all passengers, especially those coming from Bombay, while tickets are being checked. The Assistant Superintendent of Emigration at Raniganj and A-ansol has been instructed to give all possible assistance to the railway officials in the matter. The Government of the North-Western Provinces and Oudh, and the Administration of the Central Provinces, have also been addressed on the subject."

There was no time to communicate with the independent gentlemen nominated for the Medical Board, and it was expected that they would not refuse a public duty on a grave public occasion. Alive to the danger of the situation, Dr. Sircar, we are glad to find, notwithstanding the state of his health, has earnestly taken up the work. He has circulated the following letter dated the 13th October :

"DEAR SIR, Having been appointed by Government a member of the Medical Board for the prevention of the Plague, I am anxious to inspect the various parts of Calcutta with a view to see with my own eyes their sanitary condition and needs. I shall feel obliged if you will be kind enough to render me any help in this matter. I shall be very glad to accompany you to any place which you may consider as particularly requiring careful inspection, or to visit any patient suspected to be suffering from the disease."

The reported Ahmedabad cases have been explained away, and there has been no fresh case to cause alarm. It is to be hoped that the Calcutta, like the Ahmedabad, outbreak will prove no more than a scare. The quarantine rules against the plague for vessels leaving Bombay are published in a *Gazette of India* Extraordinary. They apply to Aden and the Persian and Somali coast. The Spanish Government are for a quarantine in Spain on all vessels which left Bombay after the 10th instant. A telegram from Bombay reports Hindu discontent at the forcible removal of plague victims. "Pau" fights took place between the relations of the victims and the police. The grain dealers of Mandvi refuse to open their shops. Bullock cart drivers and dock labourers are arranging to strike work if the authorities persist."

Plague is the disease of the poor. Their food as much as their dwelling requires enquiring into. Cheap and nasty articles of food equally with uncleanly homes and surroundings contribute to the generation of the pest which, spreading, creates havoc among all classes.

THE following account has a moral of its own :—

"In the year 1656 the plague was brought from Sardinia to Naples, being introduced into the city by a transport with soldiers on board. It raged with excessive violence, carrying off in less than six months 400,000 of the inhabitants. The distemper was at first called by the physicians a malignant fever; but one of them affirming it to be pestilential, the viceroy, who was apprehensive lest such a report would occasion all communication with Naples to be broke off, was offended with this declaration, and ordered him to be imprisoned. As a favour, however, he allowed him to return and die in his own house. By this proceeding of the viceroy, the distemper being neglected, made a most rapid and furious progress, and filled the whole city with consternation. The streets were crowded with confused processions, which served to spread the infection through all the quarters. The terror of the people increased their superstition; and it being reported that a certain nun had prophesied that the pestilence would cease upon building a hermitage for her sister nuns upon the hill of St. Martin's, the edifice was immediately begun with the most ardent zeal. Persons of the highest quality strove who should perform the meanest offices: some loading themselves with beams, and others carrying baskets full of lime and nails, while persons of all ranks stripped themselves of their most valuable effects, which they threw into empty hogsheds placed in the streets to receive the charitable contributions. Their violent agitation, however, and the increasing heats, diffused the malady through the whole city, and the streets and the stairs of the churches were filled with the dead; the number of whom, for some time of the month of July, amounted daily to 15,000.

The general calamity was increased in Naples by malcontents, who insinuated that the distemper had been designedly introduced by the Spaniards, and that there were people in disguise who went through the city sowing poisoned dust. This idle rumour enraged the populace, who began to insult the Spanish soldiers, and threaten a sedition; so that the viceroy, to pacify the mob, caused a criminal to be brake upon the wheel, under pretence that he was a dispenser of the dust. A violent and plentiful rain falling about the middle of August, the distemper began to abate; and on the eighth of December the physicians made a solemn declaration that the city was entirely free from infection."

* In Hooghly district: Hooghly-Chinsurah, Serampur, Uttarpara, Badayahi, Bhadreswar, Kurrang, Bansheria. In Howrah district: Bally. In the 24 Parganas: Cossipore-Chitpur, Manikola, Buranagar, South Suburban, South Dum-Dum, North Dum-Dum, South Barackpore North Barackpore, Baraset, Naihati.

We have already (*R and R.*, 3rd October), given the letter of Professor Vambéry of the Budapest University written direct to the author of "Hindu Castes and Sects." Today we give an extract from another letter from the same eminent Professor of Oriental languages:

'As to the work of your learned friend, I shall certainly not neglect the opportunity to do justice to his most valuable and instructive book which, I dare say, is the first of its kind about the Sects and Castes of India.

With regard to the liberal views of the author, I fully share his opinion on religions in general, being already sick of the horrible hypocrisy and unblushing mendacity of Christianity. You must not believe we continental people are like the English. Many of us, and particularly literary people, are fully convinced of the shame of belonging to any positive religion, and we are working hard to pull down this abominable fabric of lies."

We are sure the Professor, though speaking in passionate terms, means no offence. He writes more in sorrow than in anger. We can enter into his feelings, for we too are sometimes led into denouncing the action of men of our religion. Generally, it is the professors of religion who are to be handled roughly, for men are better than their religion. Those who live and fatten by pandering to vice under the garb of religion, are more to be avoided than the bad phases of a religion.

IN speaking of the Sultan of Turkey, our London correspondent is unusually hard on poor Abdul Hamid. Our correspondent is generally very liberal in his estimate of men and things. His catholicity has won our admiration. If he knew the Sultan personally, he would speak of him in a different tune. Professor Vambéry knows him and gives him a good character. The more-sinned-against-than-sinning Sultan has again been driven to a situation in which he needs sympathy and disinterested counsel. We make no doubt that Professor Vambéry and others will come to his rescue in this hour of peril. We confess we have a sneaking fondness, if not for the Sultan, for Turkey, and we do not relish the prospect of her exclusion from the comity of Europe on the unique occasion, if only for the numerous Mahomedan subjects of Her Majesty in the Indian Empire.

We cannot be sufficiently thankful to our London correspondent for his offer of hospitality to native visitors to England during the celebration of the 60 years' reign of our beloved Sovereign, who has proved herself a true Hindu mother to her dark children.

THE following is a cutting from the *New York Herald*:-

"A curious and singularly interesting book has come to us from Calcutta, the publishers being Thacker, Spink & Co., and the author being Jogendra Nath Bhattacharya, M.A., D.L., President of the College of Pandits, Nadiya, and author of an able work on Hindoo law. The present work is entitled 'Hindoo Castes and Sects,' being an exposition of the origin of the Hindoo caste system and of the bearing of the sects toward each other and toward other religious systems. Only those who have lived in India can have any idea of the importance and many ramifications of the Hindoo caste system, and of the difficulty of obtaining exact information in regard to the points of difference between the various castes and sects. The author here clearly explains the origin and nature of the caste system, after which he devotes a chapter to each caste, showing us where it flourishes and how it differs from other castes. Thus he tells us about military castes, scientific castes, writer castes, mercantile castes, artisan castes and clean and unclean castes. As an introduction to this part of his book he gives us a succinct account of the Brahmans throughout India, showing us the causes that have led to their degradation in so many cases.

The better part of the book is devoted to a description of the various Hindoo sects and is mainly interesting for the reason that it throws some light on Buddhism and other Oriental forms of belief. More interest is now being taken in the East and in Eastern manners and customs than was ever taken before, and this book by such a learned Oriental professor will certainly tend to keep alive this interest. Not that the book will ever become popular, for, to speak frankly, it is rather heavy reading, but, wedged in between the long jawbreaking Indian names and the dry historical passages are a few gems of folklore and mythology, and if only for these the book will be prized by many a student of Oriental faiths and customs."

By an order dated the 5th of October, appearing in the *Gazette of India* of the 10th of October, 1896, the Governor-General in Council has appointed the 6th day of October, 1896, as the day on which the Pilgrim Ships Act (XIV of 1895) shall come into operation. It has also been ordered that every pilgrim ship shall contain, in the first or upper be-

DEAFNESS COMPLETELY CURED: Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aurial Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

tween deck, at least 12 superficial feet and 72 cubic feet, and, in the second or lower between-deck, at least 16 s. feet and 96 c. feet, of space available for each pilgrim; and that two persons of the age of one year and upwards and under the age of 12 years shall, unless otherwise expressly provided, count as one pilgrim. The same *Gazette* publishes the rules under the Act, which rules, under it, are practically the Act itself.

IN his Inspection Report on the Darjeeling Municipality, the Sanitary Commissioner remarks:

"I only say at once that a high standard of municipal administration has been attained, Darjeeling being in this respect much in advance of any of the hill stations in the Punjab (including Simla), of all of which I have personal experience. By this I must not be understood to mean that the sanitary administration here is perfect: it is far from that; but judging from the advance that seems to have been made in recent years, and the eager desire on the part of the authorities to carry out suggested reforms, the time is probably not far distant when there will be little or nothing to find reasonable fault with in the municipal administration of Darjeeling."

Speaking of public latrines, Dr. Dyson says:-

"In Darjeeling one always knows when one is approaching a public latrine from the strong smell of phenyle with which it is the custom to disinfect it. I suppose phenyle is used because it is supposed to be a strong germicide. It is a germicide, but not a powerful one, and as it is objectionable in smell, perhaps the municipality would like to try some other disinfectant. I recommend the following solution of perchloride of mercury (corrosive sublimate):-

Corrosive sublimate	1/2 oz.
Hydrochloric acid	1 oz.
Aniline blue	20 grains.
Water...	3 gallons.

This is a very powerful germicide, and has the additional advantage over phenyle that it is odourless."

Dr. Dyson is a member of the Medical Board appointed to prevent plague at Calcutta. Let us hope he will make it as sanitary as Darjeeling. O for a month of Sir Stewart Hogg!

THE B. I. S. N. Company having established a third weekly steamer service between Calcutta and Rangoon, mails for Burma and the Straits Settlements will be closed on Saturday, with a supplementary mail of unregistered articles only; Sunday for Burma and the Straits Settlements by the steamer timed to leave Calcutta on Monday; Tuesday for Burma only by the steamer timed to leave Calcutta on Wednesday; Friday for Burma only by the steamer timed to leave Calcutta on Saturday.

REIS & RAYYET.

Saturday, October 17, 1896.

THE SEPARATION OF JUDICIAL FROM EXECUTIVE POWER IN INDIA.

AN esteemed English correspondent writes:

"Mr. M. Ghose's paper on Separation of Judicial and Executive Functions is not quite what is wanted---people here are nearly all agreed that they ought to be separated. What is wanted is to shew that the expense will not be so great, if the existing officials are separated and allocated to one or other function."

This is satisfactory news so far as it goes. The first step gained, we may look forward to the final. But we are not sure that cost is the only impediment. In Calcutta, the Chairman of the Calcutta Corporation was also the Commissioner of Police. It was long urged on the Government of Bengal that the two offices should be separated. Government, though convinced of the reasonableness of the demand, waited and waited. When the Bill in which the present elective Municipality was provided for, was in Council, under charge of the then Chairman of the Corporation, Sir Stewart Hogg, a petition went up for the separation of the two offices. Sir Richard Temple, the then Lieutenant-Governor, who had ordered the election clauses of the Bill, was also willing, we believe, to allow the separation. But Sir Stewart Hogg then demi-officially explained that the old provision was retained that there might be no change in the position of the then holder of power. We understood that the next amendment of the law would disunite the two offices. When Sir Henry Harrison introduced his Bill to raise a larger revenue

from the house-owners of Calcutta, Government had decided upon the separation and the Bill provided that the Chairman of the Corporation shall hold no other office. At the final stage of the Bill, Sir Henry moved an amendment to preserve intact the old arrangement. It was not agreed to. This shews how officials in India cling to power and how jealously and zealously they guard it. It is something if the feeling reported by our correspondent is that of the India Office. We make no doubt that the general voice in England is against the present practice. But unless the India Office has been able to prove superior to officials in India, we cannot hope for the change. Here we may mention that the Secretary of State was always opposed to separation of the offices of Chairman of the Calcutta Corporation and Commissioner of Police. It is evident, when Mr. Ghose published his pamphlets he was under the belief that the objection based on the ground of expense was not the only obstacle, though put forward as such. He is not convinced that the India Office and those in authority require only to be shown that the separation does not involve additional expense. Mr. Ghose is now engaged on a second edition of his pamphlets in one volume, and we hope he will, in that volume, meet both the objections. We expect him to give the previous history of the two offices of Magistrate and Collector.

Let us take a glance. Immediately after the acquisition of the Dewany in 1765, it was not thought prudent to entrust the collection of revenue or the administration of justice to European servants of the Hon'ble East India Company. The first step to introduce Europeans for the purpose was taken in 1769, when Supervisors were appointed for superintending the native officers. It was not till 1772 that regular arrangements were made. A Board of Revenue was appointed and two courts—Dewany or Civil and Fouzdary or Criminal Court—established. The Supervisors, now termed Collectors, presided over the civil court and attended the other court to see that all formalities of trial were observed. Appeals from these courts lay to two other courts—the Dewany Sudder Adalat or Chief Court of Civil Judicature and the Nizamut Sudder Adawlut or Chief Court of Criminal Justice. In 1774, the European Collectors were withdrawn, a new system of police was introduced and native officers styled Fouzdars appointed, the superintendence of collection of revenue being vested in Provincial Councils established at Calcutta, Burdwan, Dacca, Moorshedabad, Dinagepore and Patna. In the same way, the administration of civil justice was transferred to aumils. Six years after, in 1780, courts of justice were established in the six great provincial divisions, distinct from and independent of the Revenue Council. These courts were presided over by covenanted servants. "The Judges of these courts were wholly unconnected with the Revenue Department, except in the four frontier districts of Chittra (or Hazaribagh), Bhaugulpore, Islamabad (or Chittagong), and Rungpore, where, for local reasons, the offices of Judge, Magistrate, and Collector were vested in the same person, but with a provision that the judicial authority should be considered distinct from, and independent of, revenue functions." Next year, the Provincial Councils were abolished and Collectorships reconstituted. The same year also found the withdrawal of fouzdars and thanadars, introduced in 1774, and 18 Civil Judges "were invested with the power, as Magistrates, of apprehending dacoits and

persons charged with the commission of any crime or acts of violence within their respective jurisdictions." They had not the powers of a judge to try but only the power of the police to apprehend.

With the advent of Lord Cornwallis as Governor-General of Fort William in Bengal, began a further change. "The European Civil servants superintending the several districts into which the country was divided were each of them vested with the united powers of Collector, Civil Judge and Magistrate." In ordering this union of different authorities in the same person, the Court of Directors were influenced by considerations of its "having a tendency to simplicity, energy, justice, and economy." They were actuated by the necessity of accommodating "their views and interests to the subsisting manners and usages of the people, rather than by any abstract theories drawn from other countries, or applicable to a different state of things."

It was not long before Lord Cornwallis found out the mistake of the amalgamation. Differing from the Court of Directors, in 1793, before closing his first term of office, he annulled the judicial power of all officers of the revenue, established courts of civil judicature in districts, in which the new Judges were European Covenanted servants of higher official rank than Collectors, who exercised the powers of Magistrate as well as of Civil Judge and controlled the police, one officer in each district being Judge and Magistrate, and another Collector. This arrangement continued for a long time.

Lord William Bentinck once more united the two offices of Magistrate and Collector. It was a temporary union. The duties of a Collector having considerably increased with operations for resumption of revenue-free tenures, Lord Auckland, in 1837, again decided upon separation. The process continued till 1845, when the two offices were disunited everywhere except in three districts of Orissa and in the independent Joint-Magistracies of Pubna, Maldah, Bogra, Bulooah (or Noakhally), Furreedpur, Bancoorah, Baraset and Champaran. The salaries of the separated Collectors were uniformly fixed at Rs. 23,000 a year, except in Bhagulpur, Monghyr and Birbhum, where they were Rs. 18,000. It was proposed that the salaries of Magistrates would be in two grades of Rs. 18,000 and Rs. 12,000. They were, however, in 1842, reduced to Rs. 10,800 per annum.

The creation of the Lieutenant-Governorship of Bengal knocked the "separate" system on the head. In 1854, the Deputy Governor of Bengal was raised to a Lieutenant-Governor and the Governor-General ceased to be Governor of Bengal. This separation of the two offices of Governor-General of India and Governor of Bengal revived the question of amalgamation of the offices of Collector and Magistrate, and the mutinies hastened the decision which we have now to fight. The re-union sanctioned in 1859, was vigorously opposed by Mr. Grant. But Sir Frederick Halliday, the first Lieutenant-Governor of Bengal, Lord Dalhousie and Lord Carnarvon having supported the measure, Lord Stanley, who was then Secretary of State for India, sanctioned the amalgamation, by his despatch No. 15, dated the 14th April 1859. He directed "(1) that the offices of Magistrate and Collector, where now disunited in Bengal, should be combined in the same person, and that such of the covenanted officers as are now Magistrates, and are not absorbed in the higher office, should be employed as Joint-Magistrates

and Deputy Collectors, but without any decrease of salary; and (2) that the Joint-Magistrate in each district should ordinarily have the superintendence of the police under the general control of the Magistrate."

It is not denied that the work of a Collector-Magistrate is increasing every year and that it is too varied for one head however great. Sir Henry Harrison, when Junior Secretary to the Bengal Government, wrote: "It is rather hard to expect a district officer to perform any work which is put upon him, from an agricultural exhibition to a report on *cetacea*, and then to blame him for not knowing the interior of his district."

We will conclude this hasty account with an extract from a minute by the Lieutenant-Governor Sir William Grey, which does not appear in Mr. Ghose's collection.

"There are, at all times, men in the service who are better suited by the character of their intellect and by temperament for judicial work than for executive work. The converse is also true. I have known men badly qualified for the judicial bench make very good commissioners, and I know others of great ability, and the character of whose intellect peculiarly qualifies them for judicial work, who have, from special causes, entirely failed to give satisfaction as commissioners. It would be a gain to the judicial service to retain such men as these last; and it would, on the other hand, be a great advantage to the general service of Government that they should not be placed in an office, such as that of commissioner, the duties of which, though not requiring greater intellectual ability than the office of judge, do nevertheless require the possession of certain special qualifications which are not necessarily or always found in combination even with superior intellectual capacity.

Under the existing system which leads civil servants to regard a commissionership as the ordinary promotion from a judgeship, it is very difficult to reject the claims of an able man to a commissionership, even though it may be felt that he is not well fitted for that particular office."

• An attempt has also been made, by Mr. Romesh Chunder Dutt, of the Indian Civil Service, now Commissioner of the Orissa Division, to shew that the cost of separation of the two services—executive and judicial—will not be so heavy as it is supposed to be. We must not, however, omit to mention that Sir Antony MacDonnell, while officiating as Lieutenant-Governor of Bengal, found fault with Mr. Dutt's scheme which was published in *India* in August 1893. We understand that the next (October) number of the *Imperial and Asiatic Quarterly Review* will open with a paper, by Sir Charles Elliott, on the subject of this article.

OUR LONDON LETTER.

September 23.

To-day our most gracious Queen and Empress has reigned longer than any of her predecessors on her great imperial throne. George the Third's reign was, until to-day, the longest in our annals. But the last ten years of his reign were practically non-existent, as far as he was personally concerned, because of his melancholy mental derangement. Our Sovereign to-day has reigned and ruled since the 20th of June 1837, and, as all loyal subjects in Great Britain, India, and her colonial possessions devoutly pray, she may be spared to see the 20th of June 1897, completing sixty years since she ascended the throne. On that day there will be an outburst of loyalty, such as the world has never before witnessed. Every monarchy in Europe, and the great Republic of France will be represented, but I hope Turkey will on that occasion be boycotted, and, should the miserable Abdul Hamid be then in life, Lord Salisbury will have the courage to tell him, that on no terms can he be allowed to join the comity of Europe. Then, I believe, we are to have representatives of your ancient dynasties, princes who bear grand historic names and to whom the people of this country will pay unbounded homage. And our colonies, Australia, New Zealand, Canada, and our West India settlements will not be behindhand in paying their tribute of loyalty and fealty to as noble a Sovereign as ever held the sceptre of Empire. The papers to-day are flooded with details of her reign, so I will be brief.

The Queen's marriage was a singularly happy one, and Prince Albert's death, in 1861, was to Her Majesty an overwhelming sorrow. But, how nobly she bore her grief! Lord Beaconsfield has borne his testimony, and our gracious Queen is one of the most accomplished ladies of business in her grand empire. The 20th of June next year will be a record one in the annals of European monarchies. And as the son of a man who gave his life for India, I shall be proud to be the host in London of any of your friends who are desirous of paying their tribute of homage to the Gracious Empress of India.

September 25.

To-day the great factor in all our papers is the appearance yesterday at Liverpool of the G. O. M. Time is so pressing that I have not been able to follow his speech in detail, but I have seen enough to understand that he not only relieved the present Government from undue responsibility, but went further in his attempt to rouse the national feeling of Europe. I myself was a thorough supporter of Mr. Gladstone until, in 1886, he initiated his Home Rule policy in regard to Ireland. But, although no worshipper at the present moment of Mr. Gladstone, I cannot refrain from saying that his appearance yesterday at Liverpool, and the speech he delivered will form an epoch in the annals of British rhetoric. The position of affairs at Constantinople is of the very gravest character, and should Abdul Hamid carry out his threats against our ambassador, be the cost what it may, Great Britain will, if she has to stand alone in spite of the blood relationship between the monarchies of England, Russia and Germany, know how to protect the national character.

Validity of Anglican Orders. I do not suppose this is a question of much interest to your readers, but, as it is a burning one here, I cannot pass it over altogether. The Romanist party in the Church of England has been fortunate in this, that both in Lord Salisbury and Mr. Gladstone they have had warm sympathisers, particularly in the latter, whose close personal friends are to be found in the Church of Rome. So long as the High Church party confined themselves to improving the somewhat bald worship of the Low Church party, things worked pretty smoothly. But when the former began to imitate the Roman ritual, and the Bishops were either in sympathy with them, or indifferent, a strong reaction set in, not powerful enough apparently to set a curb on those "priests," who, while enjoying the status and emoluments of the "Protestant" Church of England, are at heart antiprotestants and claim for themselves all the supernatural powers supposed to be vested in the One Church ruled by the vicar of Christ, that is, the Pope. This arrogant sacerdotal party in the Anglican Church is represented by the English Church Union, of which Lord Halifax (son of Sir Charles Wood, so well known in India as the author of the famous education despatch of 1854) is President. He lately made a pilgrimage to Rome, to endeavour to persuade the Pope to bring about a reunion of the two Churches on the basis of the Roman Church acknowledging the validity of the orders of the Anglican.

From a striking article in the "Times" of the 19th instant, I see the movement has collapsed, the "prisoner of the Vatican" having put his foot down and given judgment that there can be no reunion until the peccant clergy and laity of the Anglican Church return to the true fold. The text of the apostolic letters has not yet been published, but, "we are given to understand that they are so worded as to leave no loophole for escape. Anglican orders are declared to be null and void. Rome has spoken and the controversy is now closed, and, we venture to add, it is closed none too soon." Mr. Gladstone, in his famous letter which at once alienated the "nonconformist conscience," wrote of the "cordial sentiments of reverence, gratitude and high appreciation" with which he and his friends in the Church of England, regarded the Pope's proceedings in the matter. The writer of the "Times" article goes on to say: "They have not much to be grateful for, since they find themselves treated as mere outcasts, denied all share in the most sacred mysteries of Church and deriving no benefit from the miraculous powers which their invalid clergy have been claiming and professing to exercise. Now that they have got the Pope's sentence, some of them may be led to review their own position and to be less certain that they are really in possession of the vast supernatural powers which the Pope so cruelly denies to them, and which not a few of their own order have never so much as professed to share. As to the traditional policy of Rome, there can be no room for doubt. The duty of submission to the Pope stands clearly as an article, not of opinion, but of faith. On this point, therefore, the Pope may claim the full infallibility which the Vatican decrees have conferred upon him. He is, and he intends to be, master in his own house, and he tells us *ex cathedra* the only conditions under which outsiders can be allowed to enter. Unfortunately they do not support the correctness of the information which Mr. Gladstone was allowed, through the kindness of Lord Halifax, to share, while they show a sadly negative result from the labours of his Holiness Pope Leo XIII. in

furtherance of truth and peace.' But we are none the less thankful to the Pope for having so clearly defined his own position, and that of the Anglican Church, in language which no party in the Church can ever again pretend to misunderstand or to misinterpret."

While this crushing blow has fallen upon the extreme sacerdotal party in the Church of England, a most interesting yet painful correspondence has been going on in the columns of the "Times" on the "poverty of the clergy." It is a terrible thing to have to allow that although in some aspects the Anglican Church is one of the wealthiest, in others it is one of the poorest of Churches. With a revenue of over seven millions, it is an acknowledged fact, and the figures are understated, that "400 beneficed clergy receive less than £50 a year; 3,500 less than £100 a year." And then in contrast with this frightful impoverishment you have 2 Archbishops dividing £25,000, while 31 Bishops take an average of £4,500, each. In addition to these, 179 Deans, Canons Residentiary, and Archdeacons absorb about £130,000. On the face of these figures, it would seem as if these 200 to 220 highly paid clergy might make a beginning by coming to the relief of their poorer brethren. An endeavour is being made to work a Church Sustentation Fund under the auspices of such lay men as the Duke of Westminster and Lord Egerton of Tatton. But, as Lord Grimthorpe has well pointed out, there will be no hearty response on the part of the laity generally, so long as in matters of ritual they are at the mercy of "sacerdotal" priests. This Papal bull (published since I wrote the above) may do a signal service to the Anglican Church, if it succeeds in divesting these arrogant priests of their impudent assumption that they possess "supernatural powers," and are a class set apart from the laity.

Egypt. The success of the Khedive's troops in their advance on Dongola, reflects the very highest credit on the Sirdar (Sir Kitchener) and the officers he "has the honour to command." The absence of any effective resistance on the part of the Dervishes does not in any way detract from the masterly generalship of the Sirdar. Common opinion now is that Khartoom itself is within his grasp, and, as I wrote some weeks ago, when the Egyptian with British flag floats on the ramparts (such as they are) of Khartoom, it will be felt poor General Gordon's cruel fate has, in some measure at least, been avenged.

Madagascar. M. Laroche has been recalled and General Gallieni goes out to assume supreme command, civil as well as military.

Letters to the Editor.

THE BENGAL PROVINCIAL CONFERENCE AT KRISHNAGHUR.

WHEN Cicero came forward as the accuser of Verres, what were the arguments he advanced why the prosecution should be committed to him? "Because," said Cicero, "I am acquainted with the evasions and sophistry of his advocate Hortensius. I am accustomed to combat and overthrow him." Being an eye-witness of the last conference, I am justified, I think, without aspiring to the fame of the great Roman I have quoted, in writing the following lines on the same.

In the words of Lord Clive, Krishnaghur is the Indian Belvedere. In this historic old town, the second Bengal Provincial Conference held its sittings. About a hundred and fifty years ago, from this place, mandates were issued for government, in social matters, of nearly the whole of the Hindu population of Bengal, by Maharaja Krishna Chandra Roy, who may not unfitly be spoken of also as the Mæcenas of Bengal for the encouragement he gave to literature. It was here that the foundation was laid of British Rule in India. In the very hall where the Conference met, Maharaja Krishna Chandra had received Lord Clive and plotted with him for the destruction of the highly unpopular rule of Serajuddowla, the last of the independent Nawabs of Bengal, Behar and Orissa.

Somewhat on the principle of killing two birds with one stone, I had the pleasure of paying a visit to my native town after years of monotonous life in the metropolis full of "universal hubbub wild of stunning sounds and voices all confused" as a delegate, without any instructions and as a patriot without any patriotism. It was simply for curiosity's sake and not for the sake of delivering India from the "ruthless spoliation" of the British Rule, that I went there. In spite of the ceaseless downpour which deluged the town, the student population of Krishnaghur worked with unabated zeal for the comforts of the delegates. The enthusiasm that filled them, and the attention they showed them, were beyond all praise. They laboured day and night, without any rest. Commenting upon this the President of the Reception Committee, Mr. M. Ghose, said,—"So far as the will is concerned, nothing is wanting." Maharaja Jagadindranath Roy Bahadur of Natore refused to accept the presidency of the conference on the ground of an ancient custom of the houses of Krishnaghur and Natore. As a descendant of

Rani Bhabani, the Maharaja of Natore cannot pay a visit to Krishnaghur without special invitation. It is an old custom that the Maharaja of Krishnaghur must invite the Maharaja of Natore three times. The first two invitations must be refused and the third accepted. The Maharaja of Natore should then come to Krishnaghur with all his retinue. The Maharaja of Krishnaghur should have also to spend a large sum of money for his guest. As the finances of the Maharaja of Krishnaghur are not in a flourishing condition, and as he has no quarters suitable for a guest of the social position of Natore, the former could not possibly invite the latter. The same rule governs the visit of the Maharaja of Krishnaghur to Natore, for the two houses are equal. The Hon'ble Guru Prasad Sen was requested to become the president of the Conference. The invitation was issued by Babu Surendra Nath Banerjee. The Ranaghat Pal Chowdhuries were represented by Babu Gyanendranath Pal Chowdhury. The Pal Chowdhuries of Latuda were represented by two horses and a carriage. Mr. Garret, the District Magistrate, being asked to attend the Conference, wrote to Mr. E. V. Westmacott, the Commissioner of the Presidency Division, for permission. The Commissioner is not in favour of the Conference. Accordingly Mr. Garret wrote to Babu Tarapada Banerjee, the Secretary, expressing regret at not being able to come, declaring, however, at the same time his fullest sympathy with the movement. Many of my brother delegates went to make their first acquaintance with the famous sweets of Krishnaghur, a surefit of which upset the "Prince of Patriots" and the emaciated gentleman of the *Patrika*. The latter, for this reason, absented himself from the meeting of the second day. So far as the personal convenience of delegates was concerned, I am bound to say that the conference was a complete success. The same cannot be said of the purpose for which we met. The subject-committee which sat three times, was "a home-made affair," as was remarked by a pleader-delegate. The "Apostle of Local Self-government," after his fashion, monopolised the whole business. Babu Surendranath was the Aaron's serpent that swallowed up the whole conference. No one of the delegates was allowed to propose and second any resolution who was not his friend or known admirer. The repeated opposition of Babu Moti Lal Ghosh of the *Patrika*, was unable to stem the tide of his eloquence. Mr. Manmohan Ghose, seeing the turn matters had taken, ceased to take any part and spoke not a word on any of the resolutions. The Chairman Babu Guru Prasad Sen systematically kept his Pythagorean silence. As monarch of all he surveys, Mr. Surrender Not, in spite of the Zoilus of the *Patrika*, received an address from the student community for the excellent service he had done in his country's cause at the Poona Congress. What a sublime example of hero-worship! India! Art thou not proud of such a son?

In arguing, too, the patriot owned his skill,
For, even tho' vanquished, he could argue still,
While words of learned length and thundering sound
Amazed the gazing students ranged around;
And still they gazed, and still the wonder grew
That one small head could carry all he knew.

There is no printing press in Krishnaghur and, hence, great inconvenience was felt by the delegates. This conference would have done a real good to the town, if it could be an occasion for establishment of such a press.

A remarkable feature of the Conference was the absence of the Brahmos. The Editor of the *Sanjivani* sent three telegrams, one to Babu Tarapada Banerjee, one to Mr. M. Ghose and another to the Hon'ble Guru Prasad Sen, on behalf of the Brahmos of Calcutta, intimating their inability to attend so long as the Secretary took any part in the proceedings. Mr. Surendra Nath Banerjee sent an immediate reply, informing the gentlemen that their presence on those terms was not needed.

The change of date of the Conference was due to two causes. The first was the indirect refusal of the Maharaja to allow the use of the Rajbati Hall. Pressed by some enemies of the Congress, the Maharaja requested the Reception Committee not to preach any sedition. The Committee resenting the insinuation, refused to use the Hall, and sent a telegram to Mr. J. Ghosal at Calcutta for sending up a circus tent. But at last the Maharaja found out his mistake and sent his Dewan and other officials to Babu Tarapada Banerjee requesting him to use the Hall. The Committee replied that if Mr. Ghose agreed, they would take the Hall. The second cause had reference to Mr. W. C. Bonnerjee, Mr. A. M. Bose and Babu Kali Charan Banerjee. These three gentlemen had expressed their desire to take part in the proceedings. Mr. M. Ghose, with the sanction of the committee, changed the date for suiting the convenience of the gentlemen. Mr. Bonnerjee, however, had to go to Deoghur and could not come. The other two, pressed, as is believed, by the Brahmo community, did not attend fearing, as many said, to lose

that golden key

That opens the palace of eternity.

The people of Krishnaghur lived in an atmosphere of perfect

harmony. There was none even slightly opposed to the conference. They marched shoulder to shoulder to be of service to it. The sudden appearance of Mr. Lal Mohan Ghose gave a fresh impetus to their enthusiasm. Amid deafening cheers and outbursts of acclamation he marched through the hall, and the whole assembly stood up to greet him.

The presidential address was inaudible. It may have merits, but it tormented the audience sorely. Though not a lengthy one, it took nearly one hour and a half in delivery. Full of extracts as it was, the Hon'ble Guru Prasad Sen reproduced it from memory. It had a soporific effect upon many in the audience. The speeches of the two Ghose brothers were, as might be expected, exceedingly good. They were full of rhetorical flourishes and bristled with many interesting facts.

HARI NARAYANA SARMA.

THE CONDITION OF THE MAHOMEDAN COMMUNITY AND THE MEANS OF ITS AMELIORATION.

BY KHAN BAHADUR D. H. AHMED.

I intend to close the discussion on this subject so far as I am concerned. But before I make my concluding observations, I wish to dispose of certain matters which are more or less personal to me rather than of general interest. In the first place I am sorry if I misunderstood "Khaer Khwahe Islam," and, though I must say that some of my friends were equally misled and that his language was certainly not clear, I regret if I caused him annoyance. I cannot, however, flatter him that he has refuted my arguments or that I have given up my proposition. It is the duty of a writer to point out what is right and proclaim the principles, which he desires to establish, through good and through evil times, while the practical politician has to see whether it is expedient to carry a particular measure into effect. If he finds no support, it is the duty of the practical leader to recede and wait for more opportune times. But a writer who surrenders his position at the first sight of opposition fails in his duty to the community to which he belongs.

I agreed with "Khaer Khwahe Islam" that the laws of inheritance are not the only cause that has contributed to our decline; but I declared that the other causes are circumstances over which the legislature has no control. He asks, "Has any attempt ever been made to remove the other causes which are responsible for our present condition? Surely publishing essays on the subject does not mean an experiment." Change of Government and change of the language in which education is given and in which the business of administration is conducted, are circumstances which can not be modified at all, and want of energy or perseverance and habits of indulgence or extravagance can never be modified by direct measures. So that the other causes are not susceptible of experiment. I do not claim the faculties or powers of a Syed Ahmed Khan. Once in a century a man may happen to possess both the faculty of thought and the power of action, but generally each man is assigned a sphere for which he is fit and to which he is attracted. I claim no more than to draw conclusions from the past and suggest what should be done in the future. Let nobody suppose that this is a simple and easy task. Before you attempt to do anything, you must decide what to do, and you will never be able to do anything until you are convinced of what should be done. Thought must precede action. The first step is to find what you have to do, and then and then only can you take action.

"Khaer Khwahe Islam" says that in my opinion "progress consists only in enabling men to have the courage to espouse their convictions" and in nothing more. I will not say that this is a misrepresentation, but I must say that he has ignored the laws of logical science. If I say that labour will give us food, I do not mean that it will not give us clothing or lodging. I said "high education will.....do us good by producing men with the courage to espouse their convictions." I specified this as a great want in our society. It is a perversion of the rules of logic to suppose that every other good is excluded.

"A Behari Mosalman" says that I lost my temper in the letters signed by "Not a Dosté Nadeen." I was much surprised at the remark, as it has always been my endeavour to take a dispassionate view of affairs, and my friends have often remarked that I refuse to allow personal matters to enter into discussions of general interest. I have now gone through the letters signed by "Not a Dosté Nadeen" and I do not find that I have used any expression which could be considered as reflecting on the character or conduct of any individual. It is the Olema or clergy that have all along opposed our progress; it was the Olema that led Aurangzeb to reject the policy of Akbar and brought about the extinction of the Mogal Empire; it is the Olema that have issued fatwas of infidelity against Syed Ahmed Khan, the greatest benefactor of the Mahomedans of India in this century. These gentlemen, if they had the power, would sacrifice him to their bigotry, and these gentlemen I consider to be fair objects of ridicule.

In the course of this discussion I remarked that property should be tied up in favour of a single heir, and I have been taken to task. I am not a lawyer and I did not take cognizance of the niceties involved in the language I used. I did not mean that property should be tied up in favour of unborn generations in the way of entail. What I meant was that property should be tied up in favour of a single heir as against contemporary heirs. I am so thoroughly convinced of the necessity of preventing the minute subdivision of property and have so great confidence in the desire of the gentry to perpetuate their family name, that I see not the slightest need for entails. I will leave every successive holder of property to make a will of his own, for I know his principal aim will be to preserve his estate intact.

Lastly, I am pained that Mr. Yakeenuddin ascribes views to me which I do not hold. He says that I blame the religion of Islam as the cause of our present condition. I have given him no occasion to make such an inference, and I indignantly repudiate the view. There is no other religion which more perfectly realizes the absolute unity of God, which insists with greater force on the equality of all men in the sight of God, or teaches a better code of morality. If Mr. Yakeenuddin considers the sale and purchase of goods to be a part of religion, I do not. If Mr. Yakeenuddin considers the permission to have four wives a part of religion, I do not agree with him, and if he considers female slavery a part of religion I am absolutely opposed to him. The religion of Islam carried the Sahraesheens or the Dwellers of the Desert forward in the march of civilization, brought them to the forefront of nations, and led them to the furthest regions of the civilized world. The religion of Islam enabled the Arabs or Saracens to make a name which will endure to the end of time. The laws and institutions of Arabia were transplanted out of Arabia and allowed for generations to permeate all grades and classes of Moslem society and then began the decline which is visible in every Moslem country.

It is true that the religion which a community professes influences its laws and institutions. It is equally true that the laws and institutions of a people react upon their religion, and it is this reaction that has destroyed the purity and simplicity of our religion. For what is the current conception of Islam? Do the five prayers, and keep the fasts of the Ramazan, go on a pilgrimage to Ajmeer, or apprentice yourself a slave in body and soul to a presumptuous mowshed and you have secured not only your future weal but also your worldly good. The only act that comes near to virtue is the zakwat that we distribute, but it is not given with the intention of doing good. It is given in the hope of procuring a place in heaven. The entire idea of virtue at the present day is a grossly selfish idea. There is a total absence of sympathy and fellow-feeling and there is absolutely no conception of active beneficence. It is the duty of every right-minded Mahomedan to diagnose this serious disease, and to do what he can to remove this canker from the constitution of our society.

Mr. Yakeenuddin says that I have vilified our ancestors and not given them credit for the large and valuable part they played in advancing civilization. I have been under the impression that he is a careful reader as well as a careful reasoner. I do not therefore understand how he blames me for what I never said. I ask him to refer to my letter of the 24th June last, extracts from which I reproduce:

'Out of Arabia the Arabs were settled in fertile countries and they had riches, they had therefore leisure to acquaint themselves with Greek, Persian and Indian literature and they were able to advance knowledge.'

'As soon as the Arabs were settled at Damashk and Bagdad and in Egypt and Spain, they had wealth at their command and leisure at their disposal. They developed talents for the accumulation and advancement of knowledge and eventually produced a literature which revolutionized the history of Medieval Europe. It was.....the Arabs out of Arabia that produced the men who shed lustre on the annals of Saracenic civilization.....'

I request Mr. Yakeenuddin to read these passages and say if he can justify himself when he declares that I have vilified our ancestors and denied to them the splendid part they acted in the history of human progress.

I wrote these passages to prove that wealth precedes knowledge, though knowledge subsequently reacts upon wealth. Excepting poetry, the Arabs had no literature while they were confined to Arabia.

I have now disposed of matters which concerned me personally. I am sorry I have no definite conclusions to record as the result of the discussions that we have thus far had. It is admitted by all that landed property has been gradually passing out of our hands during the last hundred years, that we have become poorer, and have, therefore, lost power and influence in the country. This, I believe, we knew already. "An Indian Mosalman," "A Behari Mosalman" and "Khaer Khwahe Islam" say that we must have high education, commercial education and religious education before we can recover our position. What is the education which we

receive in the numerous Madrasahs which flourish in Bengal but religious education? Do they produce men with greater energy or better common sense, with higher ideas of morality or higher conceptions of the duties of life? Commercial or technical education comes after general education has far advanced and has penetrated the lower strata of society and I cannot understand how a people can have high education if they do not possess the means of acquiring it. Did the Meimans have high education before they had acquired wealth or has not their education followed the acquisition of wealth?

In a normal state of things, the richer classes pay for the education of the poorer. But in our case the whole community is poor and almost all students have to be supplied with two-thirds of their fees. Character is a more important factor in the advancement of a people than knowledge obtained in schools and colleges, and free or cheap education when given to an entire community is sure to demoralize their character. Do you think that the members of such a community are not lowered in their own estimation or in the estimation of Hindu students? Do you think that this feeling does not stick to each individual through life; that it does not affect his energies and habits; or that it will not vitiate his character and eventually the character of the entire Moslem community of India? So that it is not desirable to have your education in this way. Neither is it possible. The history of every country proves that the accumulation and diffusion of knowledge follow the accumulation and diffusion of wealth. I admit that the former reacts upon the latter, but I maintain that the acquisition of wealth must precede the acquisition of knowledge. As class after class advances in wealth, it advances in knowledge; and there is no instance of a class advancing in knowledge before it has advanced in wealth.

"An Indian Mosalman" ascribes our decline to extravagance and absence of thrift. "Khaer Khwahe Islam" and "A Shamsul Olema" attribute the decay to the deterioration of our character. The "Moslem Chronicle" assigns it to the inaction which has extinguished our national spirit. Mr. Yakeenuddin traces it to indulgence and apathy, bigotry and narrow-mindedness. But none of them have suggested any means for improving the character of the people. Do they suppose that the counsels of men of piety or the counsels of men of erudition will give us habits of energy or habits of thrift? They are hopelessly wrong if they suppose that the character of a people can be remodelled in this light and offhand way. What does Mr. Yakeenuddin mean when he says that it is not the laws and institutions of our society but it is the Mahomedan people that are to blame? Are laws and institutions merely a thing of beauty to look at? Are they an inert and lifeless mass from which no influence irradiates? The character of a people is largely determined by the constitution of their society and, in the case of a people whose laws and institutions have not been modified for more than twelve hundred years, I may with justice say that the constitution of their society has powerfully moulded their character. What then does Mr. Yakeenuddin mean when he blames those who profess Islamism and holds up their laws and institutions to admiration? Moslem races are more or less only what the constitution of their society has made them. They are the product of the forces generated by the laws and institutions which govern them.

The gentleman who calls himself Azeemuddin Ishak and hails from Rungpur, says that I have rushed into print merely to see myself advertised and that my arguments are such as are commonly used by penny-a-liner reformists in England. I had expected that after such an outburst he would support his views by well considered arguments. He has only put forth a string of opinions without even the shadow or semblance of an argument to support them. I might, with greater justice, say that he has rushed into print simply to see himself in print. He would like to reintroduce slavery and seems to wish polygamy had been more prevalent. It is too late, however, to speak at all in favour of slavery or seriously to defend polygamy. Slavery can not be revived in India and the ideas of the Moslems of India have already set in against polygamy. There are people who, while saying their prayers, keeping their fasts and even claiming to be descended from the Prophet, take interest and even usurious interest on money advanced. The Mimams who are so very desirous of giving up the Hindu law of inheritance do not disdain to pursue this means of increasing wealth. Mahomedans have now come to feel the disadvantages of the law of compulsory division of property. It is the Government only that can give us the supplementary measure required to make the law of succession a complete system.

"Khaer Khwahe Islam" says "that even in Europe opinion is equally divided on the question of division of property.... and that, while in America and France the property is subdivided, in other European countries it is not. Can Mr. Ahmed say that France and America are any worse off for such a practice?" I have stated it nearly half-a-dozen times that laws and institutions are only relatively good. Slavery and polygamy are useful institutions in the

beginning of civilization but they give way to more equitable domestic and social relations as civilization advances. A democratic form of Government may be suited to England and America but nobody will have the hardihood to say that Parliament is wanted in India or that it is suited to any of its provinces. The principle of equal division of property after a man's death may be suited to France and America in their present state of development, when self-restraint and self-denial, self-help and self-reliance have become organic amongst Frenchmen and Americans and are matters of hereditary descent. But the Mahomedan of India and especially of Bengal has yet to acquire these qualities and to undergo the discipline which develops them. It is absurd, therefore, to suppose that a principle of division of property must be suited to the Mahomedans of India which is suited to a people with different racial peculiarities and different historical traditions.

"Khaer Khwahe Islam" adds "man is a creature of circumstances, and people in America and France may not divide property according to circumstances, but they have the law all the same. Our law of succession is similar to this." It is not. Those Europeans who have given up the law of primogeniture for the law of equal division have also adopted the principle of testamentary disposition. A Mahomedan has no such freedom; when he dies, his property must be divided. There can be no comparison between the Mahomedan law and the law that obtains in Europe, America or Australia. I recommend the law of wills for the Mahomedan community as the only measure capable of supplementing the Mahomedan law of inheritance. No Mahomedan will be bound to adopt its provisions but some Mahomedans here and there will follow them, and we shall thus have the experiment which "Khaer Khwahe Islam" seems to demand.

(To be continued.)

AN INDESCRIPTORABLE SENSATION.

To be easily described a thing must have clear outlines and unmixed colours. In other words it must be simple. A rent in one's clothing, a boil on one's body, a tumble while walking, the shape of a box, &c., are easily set forth in words. On the contrary the complex and comprehensive things puzzle the mind and take the meaning from language.

It was for this reason that Miss Sabina Mitchell, alluding to an experience of illness, says: "At this time there came upon me an *indescribable* sensation. It was, as if the power of life were going to fail me, and I should sink down without help, as a stone sinks in water. Yet in saying this I convey no adequate idea of the nature of that feeling. I hope I shall never have it again.

The illness which led to it began in the spring of 1892. My health appeared to give way all at once. I found myself tired, heavy, and feeble. My appetite was poor, and after eating I had much distress at the stomach and pain at the chest and sides. My strength gradually declined and I became very low, weak, and nervous; and it was *when in this condition* that I felt the indescribable sensation I have spoken of.

"I soon became so depressed in body and mind that it was with great labour and strain that I attended to my business. I was extremely downhearted and feeble, and none of the many medicines I tried did me any real good. In December 1892, Mother Seigel's Syrup was recommended to me, and I began using it with, I confess, small confidence. But after having taken it for a few days I felt wonderful relief. My appetite improved, and eating no longer gave me pain. A short time afterwards the Syrup proved its value in the matter of my disordered nerves. The nervousness disappeared with my increasing strength. Nowadays, whenever I need any medicine, a few doses of Mother Seigel's Syrup quickly set me right. Having had so convincing an experience of what it can do, I recommend it to all my friends and customers. You can make such use as you like of this letter. (Signed), (Miss) Sabina Mitchell, Marchant-le-Fen, Boston, Lucis, May 17th, 1895."

"In March, 1892," writes another lady, "my health began to give way. I had lost my energy, and was languid and heavy in feeling. I had a sense of faintness and dizziness that was almost constant, and occasional spells of sinking which I cannot describe. Hot and cold flashes came over me, my mouth tasted badly, and after eating I had a feeling at the chest like the pressure of an actual load upon it. I never seemed rested, and awoke in the morning more tired than when I went to bed. I was also much troubled with wind or gas from the stomach, and raised a sour, biting fluid.

"In this manner I continued to suffer for nearly two years, no medicine that I took giving me any relief. In January, 1894, I got a small book and read in it of cases like mine having been cured by Mother Seigel's Curative Syrup. I immediately procured the medicine from Boots' Drug Stores, and after taking it about ten days felt much better. I could eat something nourishing without any pain following. I kept on with the Syrup and was soon in my former good health once more. You have my permission to make this statement public. (Signed) (Mrs.) Ann Shaw, 174, Barnsley Road, Batismoor, Sheffield, March 8th, 1895."

Touching the "*indescribable sensation*" alluded to by both ladies, an eminent medical author says: "It is syncope without the loss of consciousness. The sufferer has the keenest realisation of the bitterness of dissolution. I have seen stalwart men unnerved and shaken by such experiences till they trembled like aspen leaves."

The cause is an acid poison in the blood produced by indigestion or dyspepsia. The remedy is to purify the blood with Mother Seigel's Syrup, and to tone the stomach in the same way. Use the Syrup on the approach of the earliest signs of weakness.

Sir George Chesney Memorial Committee.

CHAIRMAN :

General Sir Henry W. Norman.

MEMBERS :

The Marquess of Lansdowne, Field Marshal Lord Roberts, Mr. George Allen, Colonel Sir J. Ardagh, Sir Stuart Bayley, Mr. William Blackwood, Sir Edward Braddon, Rev. A. G. Butler, Colonel Sir G. S. Clarke, General Sir E. Collen, Sir Auckland Colvin, Sir Julian Danvers, General C. H. Dickens, Sir Mortimer Durand, General Sir W. Stirling Hamilton, Captain Hext, R. N., Mr. A. P. Howell, Sir W. W. Hunter, Lieut-Genl. McLeod Innes, General Sir Allen Johnson, Sir H. S. King, M. P., Mr. A. Lowence, General Sir R. Low, Sir Alfred Lyall, General Sir O. Newmarch, Sir Andrew Scoble, Field Marshal Sir Lintorn Simmons, Field Marshal Sir Donald Stewart, General R. Strachey, General Sir A. Taylor, Mr. Meredith Townsend, Mr. W. C. Unwin, General Sir George White and General Sir E. Williams.

Memorial

TO THE LATE

SIR GEORGE CHESNEY, K.C.B., R.E., M.P.

A Meeting was held, on the 24th April, at the Royal United Service Institution, of some of the friends of the late Sir George Chesney, to consider the question of the commemoration of his distinguished services as Soldier, Administrator, Statesman, and Author. General Sir Henry Norman presided, and was supported by Field Marshals Sir Lintorn Simmons and Sir Donald Stewart, and other friends of Sir George Chesney. To carry out the object of the Meeting, a General Committee was formed, which included the gentlemen then present, and in addition, the Marquess of Lansdowne, Field Marshal Lord Roberts, General Sir George White, Sir Andrew Scoble, Sir Alfred Lyall, Sir H. S. King, Sir W. W. Hunter, Mr. Meredith Townsend, General Richard Strachey, Mr. William Blackwood, and others.

The form the Memorial should take was left for the future consideration of the Committee, as it would depend on the amount subscribed, but the suggestions tended towards a bust of Sir George for the India Office, and a medal for valuable contributions to Military Literature. It was resolved to limit each subscription to a maximum of three guineas.

Subscriptions will be received by Lieutenant-General McLeod Innes, 9, Lexham Gardens, Cromwell Road, London, W.

COMMITTEE FOR INDIA :

His Excy. General Sir George White, V. C., G. C. I. E., K. C. B., the Hon'ble Major-General Sir E. Collen, K. C. I. E., Lieutenant-General Sir W. S. A. Lockhart, K. C. B., K. C. S. I., His Excy. Lieutenant-General Sir C. Mansfield Clarke, K. C. B., Major-General J. Duncan, Major-General G. E. L. S. Sanford, C. B., C. S. I., Major-General G. de C. Morton, C. B., Major-General A. R. Badcock, C. B., C. S. I., Brigadier-General W. G. Nicholson, C. B., Captain J. Hext, C. I. E., R. N., Colonel W. S. S. Bisset, C. I. E., R. E., Colonel T. Deane.

Honorary Secretary :
Colonel T. Deane,
Simla.

Subscriptions will be received, in India, by Messrs. King, King & Co., Bombay; Messrs. King, Hamilton & Co., Calcutta; and by the Alliance Bank, Simla, and its branches at Calcutta, Cawnpore, Agra, Ajmere, Darjeeling, Lahore, Murree, Mussoorie, Rawal Pindi and Umballa. Subscriptions are limited to a maximum of Rs. 32 in India.

By order of the Committee,
T. Deane, Col.,
Hony. Secy.

Simla, 18th July, 1896.

POSTSCRIPT.

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1 Uchoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Babington Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, K.C.I.E., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindu Patriot*, in its palmiest days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness.—*The Muhammadan*, (Madras) Oct. 5, 1895.]

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unfailing instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, potent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Railway, from Ceylon says:—It keeps splendid time and never stopped although it sustained hard knocks and jerks. x Dr. H. Moore of Royal Artillery from Poonamallee says:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Duntun says:—I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—The watch you sent me some seven years ago is still keeping very good time.

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Re. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Re. 1-8-0. Mr. G. Smith, Salt Inspector from Sanikutia, says: "A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Purandhar says:—For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28. x Pte. H. C. Bishop of L. F. L. Regt. from Kunttee says:—A Corporal offered Rs. 30 for the very same watch. Gentlemen's open faced, keyless *real solid gold watch* Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

Balaknana, Calcutta.

KAVIRAJ NAGENDRA NATH SEN, Physician, Surgeon, Accoucheur, practises the Ayurvedic system of medicine, after having obtained a diploma at the final examination of one of the Government medical Institutions of the country.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A. HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada.

WEEKLY NEWSPAPER

AND

REVIEW OF POLITICS LITERATURE AND SOCIETY

VOL. XV.

CALCUTTA, SATURDAY, NOVEMBER 7, 1896.

WHOLE NO. 748.

WEEKLYANA.

We resume work after the holidays with the proceedings of the Medical Board at a meeting held on Thursday, the 22nd October, 1896:

"The Medical Board met at the Bengal Council Chamber at 11 A.M., and sat till 1 P.M. All the members were present, except Surgeon-Lieutenant-Colonel Cunningham, who was engaged in bacteriological researches.

The following medical officers have been deputed by the Board to make a searching inquiry into the sanitary condition and conservancy of Calcutta, and commenced their inquiries yesterday:—

In the area bounded on the west by the river, on the north and east by the Circular Canal, and on the south by Sabha Bazar and Grey Streets—Surgeon-Captain Vaughan, Deputy Sanitary Commissioner, Surgeon-Lieutenant Peck, Special Sanitary Officer, and Dr. Hay Jagannadham, Deputy Sanitary Commissioner.

In the area lying south of the above and extending to Nimtolla Ghat and Beadon Streets—Surgeon-Captain Deare, Deputy Sanitary Commissioner, and Surgeon-Lieutenant Dawes, Special Sanitary Officer.

When these areas have been thoroughly inquired into, the five officers named above will take up the area between Nimtolla Ghat and Beadon Streets on the north, and Cotton Street and Machoa Bazar Street on the south, and by that time it is expected that they will be joined by Surgeon-Captain Robson-Scott, Deputy Sanitary Commissioner and Secretary to the Medical Board, who is now studying the plague in Bombay. They will then examine other blocks lying further south up to the Circular Road.

Bhowanipur, Watganj, and Kidderpur are being inspected by Surgeon-Major Pilgrim, Civil Surgeon of the 24-Parganas.

The South Suburban Municipality and Munktola have already been inspected by Surgeon-Captain Deare, Deputy Sanitary Commissioner.

All of these officers have been instructed to pay special attention to the following points:—

- (1) Over-crowding of houses and bustees.
- (2) Condition of public and house-latrines, and side-drains and their connections.
- (3) Condition and cleansing of roads.
- (4) Sanitary condition of the compounds and courtyards of houses.
- (5) Storage of grain, condition of rag depots and second-hand clothes stores.
- (6) State of stables and cowsheds.
- (7) Condition of Tolly's Nullah and Circular Canal with reference to alleged pollution by sewers and private drains.
- (8) State of tanks used for washing and bathing, and adequacy of water-supply for drinking purposes.
- (9) Strength and working of conservancy establishment.
- (10) Facts indicating the necessity of a special Building Act and the opening out of new streets.

Their reports will be submitted to the Medical Board, which will then consider what further action is necessary.

Six cases of fever accompanied with swellings of lymphatic glands have been reported to the Board up to date, and they are of opinion that there are at present no grounds for believing any of these to be cases of true bubonic plague. At the same time, as the plague undoubtedly prevails in Bombay, and shows no signs of decreasing, the Board desire to impress upon the Corporation and the public the urgent necessity of taking effective measures to improve the sanitation of the city."

Dr. Simpson, the Health Officer of the Corporation, has addressed the following note to the Chairman, under date October 24:—

"I raised no protest at yesterday's meeting of the General Committee regarding the order of removal of the two patients from the Isolation Hospital, because the blood of these patients had been taken the same morning, and on careful examination had been found to be free from bacteria. The presence of bacteria in the blood shows that a patient is still subject to the disease and able to communicate it to others, and accordingly the absence of them in the two boys at the Hospital is evidence of their freedom from infection.

The distinction made by the Medical Board between the true bubonic plague and the mild cases of fever with glandular enlargement which have been reported is a perfectly fair one when the diseases are considered from the point of view of severity and of the degree of infectiousness, but from a bacteriological aspect, it is one which cannot be admitted, and from a public health standpoint the distinction is absolutely dangerous. For, by not taking precautionary measures in mild and early cases, all control and power of preventing the disease effecting a lodgment in the city is voluntarily discarded.

When an outbreak or epidemic of plague really commences in a town, vigorous sanitary measures and isolation of the sick are doubtless of great value in reducing the mortality and helping to stamp out the disease, but the only effective measure to prevent an outbreak or epidemic is the carrying out of vigorous sanitary measures beforehand, and the isolation of all mild and suspected cases, and it is this policy which I have been carrying out and which I would strongly urge on the Commissioners and on the Medical Board."

He has since found a true case of plague ending fatally. Yesterday's *Englishman* reported:—

"For the first time the records of the Health Officer's Department on Wednesday, brought to light a fatal case of what is said to be the veritable bubonic plague; the victim being a Hindu servant in the employ of a sugar candy manufacture at No. 1 Raja Rajbullah Street, Calcutta. The deceased had been attacked with fever on Sunday last, and on the following day glandular swelling with high fever appeared. The patient was treated by Dr. Chatterjee. On the news reaching the Health Officer's Department on Tuesday evening, Dr. Simpson accompanied by Dr. Mitra, the Medical Inspector, visited the patient, who after some of his blood had been extracted expired. On Wednesday the deceased's blood was subjected to analysis and Dr. Simpson pronounced the case to be the plague. The Police subsequently disinfecting the place where the deceased expired."

..

PLAGUE or no plague, the Medical Board have ready at hand for enforcement at any day the following regulations published in the *Calcutta Gazette* of the 4th November:—

"No. 4096 Med.—The 3rd November 1896.—Under section 334 of the Calcutta Municipal Consolidation Act, 1888, the following regulations are published for general information.

H. H. RISLEY,
Secy. to the Govt. of Bengal.

WHEREAS it is expedient to adopt special measures for preventing, checking or mitigating an outbreak of the bubonic plague in Calcutta and to pass special regulations to give effect thereto, the Commissioners in meeting, with the sanction of the Local Government, prescribe the following regulations under section 334 of the Calcutta Municipal Consolidation Act, 1888:—

1. These regulations shall come into force from the date on which the plague may be declared by the Medical Board to be prevalent in Calcutta, with the exception of regulation 8, which shall come into force from the date on which it may be published in the *Calcutta Gazette*; and they shall all remain in operation until such time as they may be countermanded by a notification in the *Calcutta Gazette*.

2. Every male householder, who becomes cognizant of any case of the bubonic plague or of fever with glandular swellings in his house, shall be bound to give information of the same to the Ward Office with the least practicable delay, unless he has reason to be satisfied that information regarding the case has already reached or been communicated to the Ward Office.

3. The Commissioners may at any time, between sunrise and sunset, after giving such notice of their intention as shall, under the circumstances, appear to them to be reasonable, enter upon any premises and summarily execute any work required under section 318 of the Calcutta Municipal Consolidation Act, 1888, or with a view to abate any or all of the nuisances indicated in clauses (i), (j), (c), (l), (e), and (f) of section 385 of the said Act; provided that when an apartment is in the actual occupancy of a female who, according to the custom of the country, does not appear in public, the Commissioners shall give at least an hour's notice of their intention to enter such apartment, and

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

shall afford her every reasonable facility for withdrawing from such part or portion of the apartment as they may desire to enter.

4. When a dwelling is so overcrowded as, in the opinion of the Medical Board, after personal inspection by at least two members of the Board, to make the inmates thereof specially liable to an attack of the bubonic plague, the Commissioners may, by a notice posted on some conspicuous part of the dwelling, require the owner or the occupier, if actually residing in the dwelling, or the tenants or the actual inmates thereof, to abate the overcrowding within 24 hours by reducing the number of lodgers, tenants, or other inmates of the said dwelling as prescribed in the notice; and in default of compliance with the requisition in the said notice, may summarily eject all the inmates, or reduce the number of inmates in such manner and to such extent as may appear necessary: provided that the Commissioners shall provide the inmates so ejected, when necessary, with suitable temporary lodgings in the neighbourhood as far as possible.

5. When a dwelling has, in the opinion of the Medical Board, after personal inspection by at least two members of the Board, been so infected with the plague as to render its further occupation a source of danger to the inmates thereof, the Commissioners may, after giving 24 hours' notice, summarily cause such dwelling to be vacated and thoroughly cleansed and disinfected; and the dwelling shall not be reoccupied: provided that the Commissioners shall make suitable arrangements for a thorough disinfection of the clothing, bedding and other articles removed from the dwelling, and shall provide the inmates thereof, when necessary, with suitable temporary lodgings.

6. If in the opinion of the Medical Board, after personal inspection by at least two members of the Board, the destruction of any hut or shed is necessary to prevent the spread of the disease, the Commissioners may, after giving reasonable notice, take measures for the destruction of such hut or shed and of the materials of which it is constructed.

7. No rag-picking shall be permitted in the streets or elsewhere, nor shall rags be transported except under such conditions as may be prescribed by the Medical Board, and any person picking rags in the streets or elsewhere shall be liable to be arrested by the Police, and the Commissioners may disinfect at their own cost, or, acting under the advice of the Medical Board, may destroy any collection of rags in rag-pickers' houses and rag stores.

8. It shall be lawful for the Commissioners to select a site and erect a hospital thereon, or convert any house or other building into a hospital, for the isolation of patients suffering from the plague in any locality which, in the opinion of the Medical Board, after personal inspection by at least two members of the Board, may be suitable for the purpose.

9. Any vacant house or other building not being a place of worship, which after personal inspection by at least two members of the Board, is in the opinion of the Board suitable and required for the purpose of an Isolation Hospital may be entered upon and occupied by the Commissioners without any notice whatsoever, and the owner or the lessee of such house or building shall not be entitled to claim from the Commissioners anything beyond a reasonable rent for the period during which the house or building may remain in their occupation: provided always that the Commissioners shall be bound to thoroughly cleanse, disinfect and lime-wash the house or building, both internally and externally, before vacating it.

10. The Commissioners shall provide suitable conveyances painted in a conspicuous manner for the free carriage of persons suffering, or suspected to be suffering, from the plague, and for the free transport of any clothing, bedding or other articles which have been exposed to infection; and it shall be lawful for them to drive such conveyances through any public and private thoroughfare.

11. When in any dwelling there is a patient suffering, or suspected to be suffering, from the bubonic plague, the Commissioners may enter that dwelling at any time between sunrise and sunset after giving such notice of their intention as shall under the circumstances, appear to them to be reasonable, and may take measures for segregating and isolating the patient within such dwelling, so far as the circumstances of the case may admit, to the satisfaction of the Medical Board: provided that where a female is suspected to be suffering from the bubonic plague, the Commissioners shall depute a female doctor to examine her; and when the patient, being a male person, and not being below the age of twelve years, cannot be so isolated, and is certified by the Medical Board, after personal inspection by at least two members of the Board to be without proper lodging and accommodation, the Commissioners may direct his removal to hospital.

12. The Commissioners may provide and set apart special burial grounds and cremation grounds on the banks of the Hooghly and Adigunga for plague patients, and may declare it unlawful to burn or bury the corpse of a plague patient in any other cremation or burial ground.

13. The Commissioners may, from time to time, by public notice, prescribe the manner in which corpses of plague patients are to be conveyed to burning or burial grounds for disposal.

14. In cases of emergency it shall be lawful for the Chairman, with the consent of the General Committee, to sanction any or all such acts as under the ordinary provisions of the Calcutta Municipal

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster London, S. W.

Consolidation Act, 1888, would require the sanction of the Commissioners in meeting: provided that the Chairman shall always convene a special meeting of the Commissioners at the earliest possible opportunity to confirm the sanction so accorded by him; and if the Commissioners in meeting do not confirm the action of the Chairman, such steps shall be taken to carry out the orders of the Commissioners in meeting as may still be practicable.

15. The Commissioners may, in their discretion, pay compensation to any person who has sustained substantial loss or damage by reason of anything done under the powers conferred by these regulations: provided, however, that no person shall be entitled as of right to claim any compensation whatsoever.

H. C. WILLIAMS,
Chairman.

The 26th October 1896."

THE Paris Correspondent of the *Daily Telegraph* reports:—

"While the Prussians were besieging Paris people living inside the invested city were glad to eat the flesh of animals which, however agreeable to the Chinaman's palate, are justly disdained by the cooks of civilised countries. Many persons inhabiting the French capital still eat horse and mule steaks with relish, but recently there has been foisted on the non-fastidious and un-epicurean portion of the community meat rejected at the Halles Centrales as diseased. This dangerous food has been what is popularly called 'doctored' by means of spirits of turpentine or petroleum, and when all signs of putrefaction have disappeared, it is sold to unscrupulous *restaurateurs* in the Latin quarter. These caterers dressed it up for the poorer students, who, being unable to patronise not only the better-class *cafés* but even the less expensive establishments organised by the lucky Duval, are glad to lunch or dine for a franc or less. Several cases of poisoning have occurred, and the police, being put on the alert, have arrested persons who were engaged in the traffic in diseased meat. It is also affirmed that the refuse was bought for the animals in the Jardin des Plantes and the Jardin d'Acclimatation. In connection with the last-mentioned place, it may be stated that a few years since some of the employés there were found to have sold the carcasses of dead animals to provision merchants, who did a good trade by turning the stuff into potted meat. This, in all conscience, was bad enough; but it is eclipsed in heinousness by the action of the people who have been calmly poisoning the struggling scholars of the Latin quarter by giving them stews made from decomposing beef and mutton which even an ostrich or a boa-constrictor might reject."

Again:—

"Poodles are generally looked upon as the most sagacious of the canine race but one at Narbonne has just cost its master a hundred franc note by its voracious and unprincipled appetite. A gentleman was sitting one evening at dinner in a restaurant of that town and whilst his soup cooled drew forth his pocket-book and took out a bank note of 100f wherewith to pay the bill when his repast was finished. The note fell into the soup, but was removed and placed at the edge of the table to dry. A gust of wind blew it on to the ground just in front of a poodle passing at that moment, and, without more ado, the animal promptly swallowed it. Perhaps he mistook it for a wafer. Anyhow, the owner of the vanished note seized the dog, read its master's address on the collar, and, without loss of time, summoned that gentleman for the value of the bank note. After much mature deliberation the court at Narbonne decided in his favour, and the dog's owner will, therefore, have to pay over 100f."

..

THE *Manchester Courier* has the following observations on St Joseph Lister's address at Liverpool:—

"St Joseph Lister is such a believer in Pasteur that he believes in his cure for hydrophobia, which a great many people regard as dangerous. He believes that even tetanus, the cause of which is deep-seated in wounds, can be prevented, it being due to a microbe; and that a perfect security may be set up against snake-bite by a judicious inoculation with the poison. The whole address is very fascinating and convincing, but we can hardly call it soothing. As we realize what St Joseph Lister wishes to impress upon us, we seem to lose our own individuality. A human being is no longer himself; he is some millions of other creatures preying upon one another. He is not an individuality, but a war. He is innumerable armies, all of which are engaged in what Captain Murray would have termed 'triangular duels.' The idealistic notion of Mm ceases to be of any effect if it be true that he is only some infinite millions of almost indistinguishable bacilli battling with one another. The worst of it is that we cannot meet the enemy in the open. We feel as impotent before Sir Joseph Lister's microbes as before—well, the Sultan of Turkey."

..

WE take the following from the *Zoophilist*:—

"The *Boston Medical Journal* says that 'doctors should not wear beards. There are bacteriological reasons against it.' But the same objection applies to clothes. The *Monthly Magazine of Pharmacy*, commenting on the subject, says—

"We are not sure whether there would be any risk about gold spectacles and an umbrella, but this is as far as they should go if they conscientiously consider the duty they owe to their patients upon bacteriological grounds."

By the way, what did microbes do for a living before they became fashionable?"

NOTES & LEADERETTES,

OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH
OCCASIONAL COMMENTS.

ADVICES from Madagascar state that the Hova Minister of the Interior and Prince Ratsimanga, uncle of the Queen, have been court-martialled and executed for complicity in the late rebellion.

CAPTAIN Marriott, of the Norfolk Regiment, captured near Smyrna by brigands, who demanded a ransom of £10,000, has been released, the Turks paying the ransom.

COLONEL Liebert and a party of German officers sail shortly for China, to reorganise the Chinese army.

IN view of the financial straits of Turkey, the Russian Government has reduced the annual payment of the Turkish war indemnity by one half.

MOST serious floods have taken place throughout France, and Lyons and other large towns are partially inundated. The height of the river Rhone is the highest on record.

THE construction of the railway from Merve to Kushk has commenced.

MR. Chamberlain has been elected Lord Rector of the Glasgow University, defeating Mr. Birrell, the Radical candidate. The students in the evening paraded with torches and tried to invade a Music Hall although it was full. They then, assisted by a mob, smashed the windows. The police dispersed them and made eight arrests.

SEVERAL important Sudan Sheikhs have submitted. A large area between Dongola, Berber and Ondurman is thus in the hands of friendlies.

THE Czar and Czarina have returned to Russia.

THE recent speeches made by Mr. Curzon and Lord Charles Beresford have excited French opinion on the Egyptian question. The Paris papers declare that the time has come for the British promises to be fulfilled, and suggest schemes to induce Germany to join in a dual alliance to force the British to evacuate Egypt.

At a meeting of the Manchester Chamber of Commerce, the President stated that the condition of the cotton trade was less hopeful than it was three months ago, and the increase was gradually tapering off. A Manchester firm has signed a contract for the despatch of a thousand cotton looms to Japan.

It is believed at Vienna that the Triple Alliance will not join in the collective action advocated in the French and Russian Press against Great Britain in connection with the Egyptian question, but that, on the contrary, the Triple Alliance will probably side with Great Britain.

A TELEGRAM from Peking states that the Emperor of China was advised to deprive Li-Hung Chang of all his offices, but it was decided that he should merely lose one year's salary.

MR. McKinley has been elected President of the United States. His victory has produced the best impression on the London, New York, and Continental bourses. The newspapers of Great Britain and the Continent rejoice at the result.

IN the French Chamber of Deputies, in a debate on the Armenian

question, M. Hanotaux, Foreign Minister, said the Powers had agreed on a common action, which must not impair the integrity of Turkey. The speech is interpreted in Paris to mean that the Powers do not consider the maintenance of the present Sultan as an essential condition to the maintenance of the integrity of the Ottoman Empire.

The visit of the Czar, he said, had led to a clear exchange of views between the Powers, and a united Europe will prove that the Sultan must grant his subjects security and peace.

IN a despatch to the War Office, Major-General Kitchener praises the excellent conduct of the Indian contingent at Suakin through the exceptionally trying summer.

THE Powers are discussing the proposal of Great Britain that the Ambassadors at Constantinople should be empowered, in certain contingencies, to form themselves into a conference to discuss proposals to be submitted to or measures required of the Sultan.

MR. Edward Poynter has been elected President of the Royal Academy.

THE tension in Crete is increasing owing to the delay in the execution of the promised reforms, and the Christian members of the Cretan Council are greatly dissatisfied.

HER MAJESTY has telegraphed her grief to the Viceroy at the threatened famine and her hope that relief to be afforded would save suffering and life. The Secretary of State for India also deeply deplores the failure of the crops and offers his full support to the measures for relieving distress and mitigating the evil.

ACCORDING to the latest official report, 18,564 persons are on relief works in the North-West Provinces, about 6,000 in the Punjab, 3,000 in Burma, 16,000 in Central India, and 8,000 in Rajputana. Test works are opening in several districts of Madras, Bombay, the North-West, the Punjab and Rajputana. Prices are rising throughout India. Rain is generally wanted, and the distress is gradually increasing.

OWING to the threatened scarcity in the Presidency, and also to the plague in Bombay, Lord Sandhurst has abandoned his cold weather tour in Kathiawar.

IN the North-West Provinces, a crore of rupees of land revenue is to be suspended. A private letter, dated Allahabad, Nov. 5, says:

"As regards the famine, our Lieutenant-Governor has come down from Nuni-Tal and is expected here in a few days. He was at Lucknow on the 2nd and had a conference with the Taluqdars to discuss the desirability of constructing irrigation canals in Oudh. He is now on his way to this, visiting Fyzabad and Benares to consult the Commissioners of those Divisions as to the nature and extent of relief works to be opened. The result will be known when he arrives here. For the present, as far as I can see, only a poor house has been opened at this town, where indigent persons are fed, and, although there are various rumours current—such as remission of octroi duty, &c.—no such relief has been ordered. Advances are, however, being freely given to agriculturists for digging *kutcha* wells, &c. Happily, the general health of the people is good, but it cannot be hoped that this will continue long, since many are passing days with insufficient food of sorts, if not in total starvation. The streets are full of half fed wretches whose cries for succour are sometimes very heart-rending. Another thing that is often seen, is large numbers of villagers carrying bundles of dried plants of paddy, &c. to the Collector of the District, to prove the state of their fields, in hopes of remission of land revenue. Poor fellows! May Heaven take compassion on them."

AS scarcity allowance, the Bengal Government has ordered an increase, from the 1st July 1896, of Re. 1-8 a month to the pay of all its whole-time menial servants (except process-serving peons attached to Civil Courts) drawing not more than Rs. 12 and permanently employed in the districts of Rangpur, Mymensingh, Backergunge and Tipperah, where the average price of rice during the quarter ending the 30th September 1896 was higher than ten seers the rupee. The increase

is only Re. 1 in the following districts where rice during the same period was dearer than one rupee for 12 seers :

Burdwan Division—Hooghly ;
 Presidency Division—24 Parganas, Calcutta, Nadia, Jessore, Khulna ;
 Rajshahi Division—Rajshahi, Dinajpur, Darjeeling, Bogra ;
 Dacca Division—Dacca, Faridpur ;
 Chittagong Division—Noakhali, Chittagong ;
 Patna Division—Muzaffarpur ;
 Bhagalpur Division—Monghyr, Malda (English Bazar).
 Chota Nagpur Division—Hazaribagh, Palamau.

REFERRING to the Divisional Commissioner's report on the floods in Orissa, a correspondent, writing on the 19th October, says :—

"In para 12 page 1818 of the *Calcutta Gazette*, dated the 14th instant, the Commissioner of the Orissa Division reports that 'there was no distress or scarcity of food and the rayyets except in Ankoora and Bhera Parganas did not even want loans.'

The rayyets in the Ankoora Pargana do not want loans. The Sub-divisional officer of Bhadrak, the Sub-inspector of Police, Basdebpur, and the Chakla Kanungos tried their best to make *Taccavi* advances and the Manager of Srimati Adharmani Mullica, Zamindar of Ankoora, was willing to stand security for her rayyets, but they unanimously refused to take loans under the Agriculturist Loan Act. The Manager of Adharmani and the Naib of her co-sharer have advanced them *dhan* (unhusked rice) from their stock at Karanjoria. During the flood the rayyets were ordered by the Manager to sow seeds on the high *Paria* lands, and an application was made to the Sub-Divisional Officer of Bhadrak requesting him to allow the rayyets to till the *Paria* lands, so as to enable them to keep seeds for cultivation, after the flood had subsided. The Sub-Divisional Officer, Babu Sreeram Chandra Bose, not only ordered the Sub-Inspector of Police, Basdebpur, to do the needful, but also instructed him to send up the refractory rayyets.

The crop as it stands now is hopeful and there is every probability of reaping at least 12 annas, provided there is a heavy shower of rain within a week, failing which the entire crop will be lost."

He follows it up with another letter dated Ankoora, November 3 :—

"The untimely cessation of the rains at the beginning of October, has dried up the crop and there is very little expectation of an average of 8 annas during the current year. Famine is looming in the distance. The price of common rice has risen from Re. 1-4 to Rs. 3-8 per maund. The *Rabi* crop cannot be cultivated for want of rain. The river Gomai, a tributary of the Matai, is nearly dried up, and to preserve the remaining crop from entire ruin the rayyets are watering their fields from adjoining tanks. The effect would be water famine within a couple of months.

Government revenue is due. The settlement of the Balasore District is about to commence, and Babu Davendra Nath Bose, Deputy-Collector, has been deputed to commence the operations. He has fixed his camp at Erom.

The railway construction is pushing on rapidly, but the rate allowed for 1000ft. of earthwork, in some instances at the rate of Re. 1-8, is inadequate for labourers' daily bread at this time of scarcity."

THE Viceroy is on tour. Accompanied by Lady Elgin, Lord Bruce, Lady Elizabeth Bruce, the Hon. Robert Bruce, Colonel Durand, and Dr. Franklin, he left Simla at 10 in the forenoon of November 2, under the usual salute. Mr. Babington Smith, the Private Secretary, discharging the slow tonga, ran in his bicycle a distance of 58 miles. We are not told in what time he did it. We should suppose it was a record ride. Arriving at Umballa, the viceregal party immediately joined their special train and left for Delhi which was reached on the morning of the 3rd. After being received by the Lieutenant-Governor of the Punjab and the Commissioner of Delhi, Lord and Lady Elgin drove to Ludlow Castle prepared for their residence. After "doing" the imperial city,—the visit has been more or less private and informal—the Viceroy left for Ulwar on the 5th, arriving there at 2-30 P. M. The Maharaja, a boy of 14, a student at the Mayo College, Ajmere, received the Viceroy in state. There were present with him the Council of Regency and other state officials. The reception, it need hardly be said, was right royal.

SIR Alexander Mackenzie will leave Darjeeling by the mail train on Monday next and arrive here the next day. An official announcement says that the departure from Darjeeling and arrival at Calcutta will be private. We believe this will not prevent friends of Sir Alexander from meeting him at the Sealdah railway platform.

THE disposal of the lifeless body of Prince Suchait Singh of Chamba has been as shabby as his death miserable. A friend of Suchait's proposed to the India Office to have his body placed at the disposal of his relatives, but it declined and gave only £15 for his burial and a similar trifle to his widow and two small children.

THE veritable case of plague ending fatally, at No. 1 Raja Raj-bullub's Street, in the northern division, reported by the Health Officer, is no better evidence of the outbreak of the disease in Calcutta than the six previous cases which have been declared by the Medical Board to be no "cases of true bubonic plague." Other enquiries show that the man who died of alleged bubonic fever was Bepin Behary Dutt, aged 32, caste *Gandhabanik*, a workman on Rs. 18 a month in the Sugarcandy Manufactory of Babu Joygopal Pal, an inhabitant of a village in Thana Indas, in the district of Bancoora. About a week or ten days before his death, Bepin had scalded his right great toe at the factory where he used to reside. A year earlier, he had suffered from syphilis. The ulcer reappeared this time with enlargement of a gland in the right groin. The fever, which lasted six days, followed the swelling. The origin of the sensation is traceable to a movement by the neighbours to have the factory, which is considered a nuisance, removed to a different quarter. Other attempts having failed, the present activity to cleanse the town was seized upon as a good opportunity to effect the purpose, at any rate to abate the nuisance.

AN English peer, writing from London on October 12, refers to Mr. Manomohan Ghose in the following words :

"On my return to London I found the two volumes by Mr. Bhattacharya (Dr. Jogender Nath's 'Commentaries on Hindu Law' and 'Hindu Castes and Sects'), and I found the Tagore case immediately. But this book (Commentaries) is written as if the author had received the remonstrance addressed to Lord Stanley of Alderley by the Lord Chancellor, and I am left to guess where the Privy Council judgment differs from, or has over-ruled, Hindu Law. I should therefore be glad if you would get some one, say, Mr. Manomohan Ghose, to write to me and make this clear. For instance, the Tagore decision seems to make 'perpetuities' and 'bequests or gifts to unborn persons' invalid, though not so by Hindu Law. Sir Charles Elliott has written an article in this month's *Asiatic Quarterly Review* against Mr. Manomohan Ghose and the Separation of Judicial and Executive Functions. He refers to the Mymensing case and blames the official (Mr. Phillips). Sir Charles Elliott abstains from reference to the discussion in the House of Lords, May 1893, though he refers to something said more recently in the House of Commons.

"I hope Mr. M. Ghose will send an answer to Sir Charles Elliott's article to the *Asiatic Quarterly Review*. I hear the Government in India is more convinced than before of the necessity of Separation. I would write to Mr. M. Ghose, but I cannot find his last letter and direction."

Alas ! Mr. Ghose does not live to respond to the call. The day of his death he had discussed with some of his friends the article in the *Asiatic Quarterly* in view of replying to it, when he fell ill and was snatched away.

As regards the Tagore case, it finally decided that a Hindu in Bengal is competent to devise by will every kind of property, so as to exclude his sons from even the ancestral property of the family in which, according to the ancient texts, the sons have the same right as the father. Jimutavahana, the founder of the Bengal school who lived in the fourteenth century of Christ, explained away those texts in a manner that rendered it possible for the father to dispose of ancestral property *inter vivos* without reference to the sons. Mr. Colebrooke, who translated the *Dyabhdaga*, failed altogether to follow the reasoning in the original, and was led to suppose that Jimutavahana had upheld the validity of sales of ancestral property by the father on the ground that when an act is done it cannot be undone. This monstrous doctrine was accepted not only by English Judges and lawyers, but even by Hindu text-writers trained under their influence. Pandit Shama Charan Sarkar, the author

of the *Vyavastha Durpan*, deplored the mischievous results of the doctrine, but, in spite of his evident solicitude to get rid of it, he saw no way out of the difficulty. Shastri Golap Chandra Sarkar also accepted the error as good Hindu law, although he had the very best opportunity of detecting it when he translated the criticism of the *Viramitradaya* on the *Dayabhaga*. The fact is, that when the mind is once saturated with a wrong idea, it is very difficult to shake it off. The nature and origin of the error were explained for the first time by Dr. Jogendra Nath Bhattacharya, and his exposition has since been accepted though not without reluctance.

The doctrine that when an act is done it cannot be undone, being accepted as genuine Hindu law, has been taken to support not only sales and gifts of ancestral property *inter vivos* but to uphold also testamentary disposition of such property. As a matter of fact, Hindu law not only does not recognise the validity of wills, but is based on principles which are altogether inconsistent with the possibility of any disposition intended to have effect after the death of the disposer. One of the fundamental doctrines of Hindu jurisprudence is, that when a person dies, his right to his property is extinguished, and his heirs become its owners at that very moment. This view of the change of ownership, by the operation of law, at the time of a person's death, is surely not consistent with the possibility of testamentary disposition.

The Tagore case infringes the Hindu law in that it recognises the validity of wills made by Hindus, and gives them the power of excluding their sons from a share of even ancestral property. In declaring that a Hindu cannot create a perpetuity, the Privy Council does not override any rule of Hindu law. Their Lordships have very properly held that a Hindu cannot make a gift in favour of the unborn. In fact, their Lordships ought to have gone a little farther and ruled that bequests are invalid under Hindu law, whether in favour of the living or the unborn. If for the sake of consistency with previous decisions, their Lordships found it impossible to declare that wills made by Hindus were invalid altogether, then the best course was to adopt English law bodily without attempting to evolve a new law, which was neither Hindu nor English but a hybrid, the nature of which must, for a good many years to come, remain unsettled and uncertain to the great advantage of lawyers but with disastrous results to the public.

Many are the errors into which Judges have fallen in interpreting Hindu law. The mischief done by following English text writers and translators is incalculable. It may not be capable now of thorough rectification. But it is certainly desirable that our Judges and lawyers should be better trained in Hindu and Mohamedan law. In their ignorance, they may claim to be infallible. They ought, however, to know that the subjects on which they are wont to dogmatise require life-long study, and that they ought not to rush in where Pandits and Moulvis fear to tread.

REIS & RAYYET.

Saturday, November 7, 1896.

THE DURGA PUJA RITUAL.

THE ritual of the Durga Puja is an invention of Bramhanical genius that surpasses everything else of the same kind, and deserves careful study. Almost every religious rite recommended or enjoined by the Shastras is cumbrous enough. But it is in the Durga Puja that we find the best specimen of the art by which the ceremonies are so multiplied and elaborated as to be in the highest degree attractive and awe-inspiring. The more arduous the priest's work, the more indispensable are his services, and the greater his claim to a high honorarium. Any Bramhan can perform the Puja of a Siva or Salgram. But the proper performance of the Durga Puja requires a kind of learning which can be attained only by careful and long study, and it therefore commands a high price.

To give a full account of the Durga Puja ritual

here is quite impossible. We purpose in this article to give only a brief summary of its principal features, so that the reader unacquainted with its details may have some idea of its nature. Foreigners are apt to fancy that at the time of the Puja every Hindu has to pass his time in self-mortification and prayers. As a matter of fact, the Durga Puja means no such thing. Generally speaking, it is a time of jubilation when an opportunity is given to the rich to spend their money in filling the purses of the priests, and in entertaining relatives and friends, not omitting the poor, with sumptuous dinners, musical performances, artistic exhibitions and costly processions. A few truly devout pass an hour or two in silently repeating the name of Durga or in some other similar avocation which keeps them occupied for the time being without causing too much strain on their exhausted faculties. To the majority a Puja is not an occasion for making them think of their past sins, or of their probable fate in the next world.

The Durga Puja strictly lasts for five days. Despite the opinion of Mahamahopadhyaya Mohes Chandra Nyaratna in support of the reduction of the holidays, it must be well-known to every Hindu in Bengal that the worship of the goddess of forts begins on the sixth day of the light half of the month of Aswin (September-October), and ends on the tenth day of the same lunar fortnight. The first day is devoted to the preliminary ceremonies and the last is taken up by the parting rites, the intermediate three days being reserved for the main rites. In some families the preliminary ceremonies commence about a fortnight before the main Pujas, on the ninth day of the dark half of Aswin. By a few others the beginning is made on the first day of the light half of the month. These are exceptions, and in the majority of cases the Puja lasts for five days. The construction of the idol and its adornment with tinsel are usually finished a few hours before the first main Puja. Even where the idol is in a condition to receive the homage of her votaries on the previous day, the preliminary ceremonies are not celebrated in front of it, but before a wood apple tree within the premises. That ceremony is called the *Billa Briksha Amantra* or giving of notice to the wood apple tree, and involves the worship of the tree and the goddess, with offerings to ghosts. The next ceremony, which is called the *Bohdan* or awakening, is celebrated generally at the same time and place. The theory is that the gods and goddesses remain asleep during the six months when the sun passes through the part of the ecliptic which is to the south of the equator, and a formal awakening of the goddess Durga is necessary to enable her to receive the Puja. The formula for the awakening ceremony is in part as follows:—

For the purpose of bringing about the destruction of Ravana and for doing a favour to Rama, the God Brahma himself awakened thee at an unseasonable hour. I am also awakening thee this evening the sixth day of the light half of Aswin. O! the beloved

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 19, SOUTHAMPTON BUILDINGS, HOLBORN, LONDON.

of Siva, I bow to thee; accept my Puja. The king of the gods gained his throne by awakening thee. I am doing the same for the sake of wealth, kingdom and renown.

The awakening ceremony is followed by the *Adhibasa* or the rites of honouring by presentation of perfumeries, garlands, &c. The articles that have to be exhibited for the purpose are twentyone in number, and as the presentation of each must be accompanied by the recitation of a Vedic formula, the whole ceremony requires a long time.

It may not be out of place to mention here that the Vedic mantras prescribed for such occasions are generally inappropriate and irrelevant. For instance, in the formula for presenting a clod of earth, there occurs the word *Mahi*, which though it ordinarily means earth, is, in that particular passage, used as an adjective equivalent to the word *Mahat* of modern Sanskrit. Again, in the formula for presenting rice there occurs the word *Dhana* which means fried barley, and not rice. In fact, in the majority of cases where Vedic mantras are used in connection with sacrificial operations, they are prescribed without the slightest regard to their true meaning. As every act involved in a religious rite must be accompanied by a Vedic formula, the authors of the ritualistic works are very often obliged to prescribe mantras that have no bearing on the subject. If a verse is found containing a single word having some resemblance to the name of any material or operation involved in a particular rite, the ritualistic author would prescribe its recitation in connection with that rite, without troubling himself in the least as to its appropriateness. Professor Wilson was somehow enabled to find out the fact that the Vedic mantras recited at the burning of a widow on the funeral pyre of her husband are not in accordance with original texts. The truth is that there is the same or even greater inappropriateness in almost all the Vedic mantras adopted for religious rites.

The ceremonies of the first day of the main Puja commence with what is called the Admission of the Nine leaves. These are of the following plants :

1. Plantain. 2. Arum. 3. Turmeric. 4. Jayanti. 5. Wood apple. 6. Pomegranate. 7. Asoka. 8. Man Kachu. 9. Rice.

All these, excepting the twig of wood apple, are procured beforehand, and kept, on the morning of the first main Puja, among the other requisites for worship, in front of the goddess. The priest commences his operations by first of all marching to the foot of a wood-apple tree. After solemnly worshipping it, he asks it for a twig with fruit which is severed from the trunk by means of a knife. Coming back to the Puja hall, he bathes each of the nine leaves reciting the while a Vedic text. That process, a very long one, over, the nine leaves are tied together, and the bundle, wrapped in a new cloth in such a manner as to look like a recently married girl, is placed to the right of the image. Popularly it is regarded as representing the wife of Ganesha, the elephant-headed son of Durga. But, according to the ritualistic authorities, it represents the goddess Durga herself.

Then follows the worship of the image which is begun by certain acts which are supposed to give eyesight and life to it. The other gods and goddesses surrounding the Durga are then treated in the same manner, and when the figures are all animated with life, then follow some operations which are meant to prevent ghosts from interfering with the worship. A dish of powered black

kidney beans soaked in sour milk is offered to the tenants of the lower regions to keep them in good humour. The next item in the morning's programme is the bathing of the goddess. The actual washing of an unbaked clay image with its colouring materials being impossible, the deity is made to perform her morning ablution in an emblematic manner. A highly polished metallic plate, called *Darpan* or mirror, is placed on a basin of hot water in front of the idol and the bathing is supposed to be caused by pouring water and other liquids on that plate. The pouring of each kind of liquid is accompanied by the recitation of some texts, and the operation takes up a considerable part of the priest's time. After some other minor ceremonies, follows the *Dhayan* or the recitation of some texts that describe the outward appearance of the deity. The following is the purport of those texts :

With braided locks, and with the moon's crescent as head ornament ; with three eyes and with face like the full moon ; her complexion being like the bud of the *Atasi* flower ; of great renown and with fine eyes ; in the first bloom of youth and decorated with every ornament, with fine teeth and heaving bosom ; killer of the monster in the shape of a buffalo ; with a trident, a sword, a discus and an arrow in the right hands ; with a club, a bow, a noose, an elephant driver's crook and an axe on her left hands ; at her foot a decapitated buffalo from which emerges a monster with sword in hand and with his breast pierced by a javelin, with fiery eyes and of truculent aspect, held as a captive by the deity by means of a noose of snakes ; the right foot of the deity on the back of a lion vomiting blood ; the toe of her left foot on the monster ; of pleasant looks and capable of conferring any favour that is asked ; destroyer of hostile troops, humiliator of the demons and fiends ; the adored of the gods.

The recitation of the above is followed by the placing of a conch shell on a tripod, and by the consecration of the water poured into it. The process is very complicated, and each step is accompanied by a mantra and some mystic signs that to persons not gifted with the powers of Mrs. Besant must appear to be quite unmeaning. When the consecration of the water in the conch shell is complete, it is sprinkled on the body of the priest and on the materials for the Puja. Then, according to the ritualistic works that are usually regarded as authoritative, follows the worship of Ganesha and of the protector of the people together with that of the nine planets, though, according to the evidence of one of the experts recently examined in a sensational defamation case, the elephant-headed son of Siva and Durga is nowhere worshiped by the people of this country. The priest then takes up a wood apple leaf and, joining the palms of his hands, proceeds to address a supplication to Durga asking her to animate the image and the nine leaves with her presence. The invitation being made and the formula for contemplation being recited again, there follows the offering of sixteen articles in gold and silver ornaments, the presentation of which forms the essential of every Puja. Then is sent up a prayer to the following effect :—

A killer of the monster buffalo, I bow to thee. Give me long life, health, victory. O terrible Goddess ! surrounded by most terrible demons, thou spreadest joy around thee. O ! give me good looks, form and good fortune. Give me male progeny, wealth and everything else that I may have a longing for, &c.

We cannot carry our analysis farther in this article. One of the prominent features of the Puja is the sacrifice of buffaloes and goats. The programme is a terrible one, and happily the practice is gradually becoming obsolete. A superstitious belief has gained ground that if the head of the animal offered in sacrifice is not severed at one stroke, then the family must be prepared for a great calamity within the year following. This

belief, has done more than anything else to soften the spirit of savage blood-thirstiness displayed by Hindu youths formerly in connection with the sacrifices offered to Durga and Kali. Instead of sacrificing any living creatures before these goddesses, many Hindus now seek to propitiate their grim deities by additional offering of fruit and sweetmeat.

The programme of the Puja on the second and the third days is, generally speaking, the same as on the first day. On the second day, there is an additional service at the moment when the moon passes from the eighth to the ninth part of her daily course in the ecliptic. The determination of this point of time gave rise to a serious controversy recently. However, as usual, nothing was concluded in the conclusion.

On the last day of the Puja, the idol is taken out of the chapel and thrown into some river or tank in the neighbourhood. From morning to evening, several auspicious omens are presented before the head of the family by his dependent. One of them is the causing of a bird called nilkantha to fly before him. In the evening there takes place a ceremony which makes life for the time being very sweet, indeed! Friends and relations meet together, and salute and embrace each other with every mark of love and affection. All strifes and animosities are forgotten, and earth seems a paradise.

THE LATE MR. MANOMOHAN GHOSE.

LITTLE did we dream that when, on the morning of the 17th of October, in our last number, we spoke of Mr. Manomohan Ghose and his two pamphlets on the separation of judicial and executive power in India, he would, the same afternoon, leave us for good, his task undone. At 10.45 in the morning, he was at his bath, where he was struck down by apoplexy and between the disease and heroic allopathic treatment, he, in 4 hours, ceased to breathe. One of the medical attendants and a friend of the deceased's who was first called in, reports:

I found him lying on a couch seizing the right hand by the left. At sight of me he exclaimed quite distinctly, "Oh! J-n, what I feared all along has come to pass. See, I am paralyzed; my life is embittered." I saw and handled his right arm and leg which were quite motionless, pinched the skin but no sensation was felt, but they possessed normal heat. There was an anxious look about his face and he frequently tried to maintain an erect posture on the couch but failed and tossed on this side and that. Presently, Dr. Girindra Nath Chatterje and then the Civil Surgeon came in. We put him flat on the bed with his head raised on pillows, and the room was darkened. A little brandy in a tumbler of soda water was given by the Civil Surgeon and the patient took about one-third of it. At this time his face became a little dusky and blank, and his words were not so distinct. The tongue was bent on the right side. He rapidly grew worse, the senses became duller, and he breathed by the mouth with a blowing sound. Afterwards spasms supervened, his jaws were clenched, he vomited 2 or 3 times, his breathing became more and more stertorous and the pulse began to fail. The spasms then extended all over the body and even the paralyzed limbs became stiff and crossed over the other side. The pupils which were contracted at the start now dilated. He was evidently dying. No medicine could be given by the mouth as the jaws were fixed. Ice-bag was constantly put on the head and latterly some mustard plasters were put on the calves, forearms and nape of the neck. Ether was injected subcutaneously but all to no effect.

Apoplexy is believed to be caused by three different conditions. 1. Sudden cerebral lesion, such as hæmorrhage or vascular obstruction, as embolism (obstruction in the minute arteries by a very small clot). 2. Influence upon the brain of

a poison circulating in the blood as in uræmia, alcohol (from drunkenness), opium, etc. 3. Sudden shock or other impression arresting the cerebral functions, but causing no visible alteration.

The symptoms in the three varieties are quite distinct to be confounded. Mr. Ghose was evidently the subject of the first kind. He had paralysis of the right side, consequently, in the present knowledge of physiology, the lesion was in the left brain. There was either a hæmorrhagic or embolic obstruction. The treatment by stimulants was, to our thinking, particularly injudicious. Taking the attack to be of the hæmorrhagic variety, the discharge of blood would be greater after stimulants. If of embolic origin, the exudation in the neighbourhood of the obstructed area would be quickened by exhilarating medicines. The rapid progress of the malady suggests the remark. When the first doctor called, the patient was able to speak. Immediately after drinking soda and brandy, he visibly declined. Stimulants intended for rousing the patient, only hastened the sleep that knows no breaking. With the spreading pressure of hæmorrhagic exudation he grew every moment worse. The treatment was apparently confined to stimulants. No anti-hæmorrhagic medicines seem to have been prescribed. The immediate evil effect of brandy on the patient should have deterred the medical attendants from pushing their favourite alcohol and its derivatives to extremes.

The late Archbishop of Canterbury, Dr. Benson, had a stroke of an apoplectic nature which was believed to be due to heart-failure, not to rupture of any blood-vessel of the brain. In his case, stimulants were properly administered to force the failing organ to act.

It is too late to discuss the treatment. We are left to only lament the death. When Mr. Ghose expired, the scene at the house, says a report, "was heart-rending. The old mother, the devoted wife, the loving daughters, all were loudly bewailing the terrible fate that had overtaken them. The outer apartments were crowded with people of all sorts. Unfortunately, not a single male relation was present." All the members that were present were too much occupied with fresh grief to think of the disposal of the body of the departed. One of the assembled friends now put the question—What was to be done with the corpse, was it to be buried or burnt? No such doubt would have been expressed if Mr. Ghose's wishes were known. He had wanted to make his will after the stroke, but both his physical and mental powers that he then possessed were not sufficient for the effort. It was a ticklish question and hard to answer. None would take upon himself the responsibility. There was, however, no time to lose, if the body were to be disposed of after the Hindu fashion. Evidently, none of the friends was for burial, for, when the questioner first voted for cremation, all agreed to it. The old mother who had not been to Europe, consenting and none of the family objecting, the corpse was carried on the shoulders of Brahmans and Kyasthas, who volunteered their services, to the banks of the Jalanghi, and thence despatched by boat to Navadwip to be reduced to ashes on the banks of the holy Ganges.

This is a convincing proof of the high popularity of the departed in his native town of Krishnaghur.

We have no space this week for the career of the deceased which had points of public interest. Mr.

Ghose had an uphill-work in life and he lived to make it successful. But it ended without attaining full glory.

EDUCATION OF MAHOMEDANS.

TO THE EDITOR.

SIR,—I have, with an enthusiasm of a zealously patriotic mind, watched with keen interest the discussion on the subject of Mahomedan education. At last an opportunity has lent itself when I can give vent to my feelings. The time has now come when, taking up the thread of the narrative as it were, I appeal to the Mahomedan community to minutely notice the remarks I have to make, based as they are on the principles of highest morality and highly beneficent objects.

The transcendently philosophical articles on the subject have but little tendency for adoption of any practical measures for the benefit of the community. Bandyng words will not do for us. The sturdy attack of the one and unrelenting and unmerciful repulses of the other, can little help us in battling with such a formidable enemy as the retrogressive tendencies of our community. Those that have beaten the drum of inconsistency, with an underlying tendency of sinister motives of selfish interest, have done nothing but made personal attacks, while the laudable object in view is left in perfect obscurity. I shall, therefore, try to expose the fundamental defect of our community, which has kept us back from progressing favourably with the hourhand of time.

We should, first of all, leaving the more advanced question of inheritance and law with the legists, look to the scholastic education of our boys. For no law of the land can make a nation develop its educational capacities; no legal influence, however great, can force a nation to a moral sense of duty, since its effect in the former is a lefthanded one and in the latter it has a diametrically opposite tendency, inasmuch as law keeps many things out of its scope, for instance, piety to God, bounty to the poor, forgiveness of injuries, education of children and gratitude to benefactors.

I am one of those who consider government as a practical art giving rise to no question but those of means and an end. And regarding it in the words of J. S. Mill, I may say "it is wholly an affair of invention and contrivance. Being made by man it is assumed, that man has the choice" either to make it or not, and how or on what pattern make it. And law, like government, is as much under human control. Thus, we ought not to allow law to tyrannically influence our moral and intellectual career (if it does at all) but that we should prove ourselves worthy of making it. It is the law of honour, the moral sense of duty, the obedience to our parents, that constitute a happy home. It is these that aid the intellectual development of a community and not law with its brute force.

Having now disposed of the question of law, I come to a very grave point, that is the accusation made against our community for not making a headway towards intellectual progress. In my opinion, the energy of those who have been rushing to print is misdirected. They blame the youths for not being able to compete with the boys of other advanced nations. But, have they grappled with the question of primary education of these boys? Have they at all studied the real cause of their degeneracy? It is not that we are in want of money, or that our law is less binding than that of other nations; the cause is the murky education of our boys. The academical instructions which our boys receive are much inferior to the high education given at schools and colleges of other nations. And it is really a wonder that inspite of this there are men amongst us to whom we can look to for guidance. We would have been a servile nation and extinct intellectually had it not been for colleges like the Alighur. But they are so few and far between that they can hardly provide for the want of us all. It is a matter of deep regret that we find but few colleges with the same reputation. Above all, it is a deplorable fact to note that Bengal, with all the advantages of a social, intellectual and political life, can boast of none. Those colleges that we have are but institutions to lay the foundation of basest morality, with perhaps a little better education and culture.

A college like St. Xavier's stands first in my estimation, on account of its perfect discipline and strict rules. Masters and boys are well aware of the advisability of carrying out the strict injunctions prescribed for them on entering the college. The concerns of education, the interests of youth, occupy the attention of the tutors who are assiduous and vigilant in their duties. Now none of our schools or colleges, either private or under the control of Government, is worthy of being mentioned here.

It is only those who have seen actual life at our schools and colleges, that can judge of the disobedience of our boys, the lifeless interest of the tutors and absence of proper supervision. However, the real cause of the decadence of Islamic civilization is to be

ascribed not to want of wealth or any defect in the social laws, but the want of good and sound education of our boys, and partially to the canker, as the "Moslem Chronicle" tersely said, of the lifelessness and inaction that is crushing the life blood out of our society.

A word or two with regard to the poor condemned Maulvis, Olemas and their *Futwas*.

The demoralizing effect of civilization has slowly but surely been casting such an ill-fated effect on us that we might easily have been convicted as the citizens of Sabaris or Daphne, had it not been for the unbending piety and persevering opposition of our strictly religious Maulvis. It is the binding laws of our religion that have kept us afloat with tolerable integrity within such a treacherous sphere.

Having once referred to the moral education of our boys, I believe the following will not be out of place. That all the Mahomedan schools and colleges should, like St. Xavier's, enforce the teaching of our scriptures. By scriptures I mean the principles taught by our Al-koran, the rules laid down of piety, justice, benevolence and purity, &c. This should not be looked upon as secondary education, but that it should be regarded as the basis of all education and culture. Examinations, monthly, fortnightly or even weekly, should be made to ascertain the progress of the boys.

The principle of religious education is in conformity with the principles of all noteworthy schools, colleges and universities, either here or abroad.

S. A. A. ASGHUR.

OUR LONDON LETTER.

October 2.

Great Britain. The Royal and Imperial party at Balmoral breaks up tomorrow. A European interest has been excited in the family gathering of the two greatest potentates in the world. Its influence on great current questions can be only of an indirect character, as our constitutional monarch can act through only her responsible ministers. The Emperor has apparently enjoyed his stay at Queen Victoria's Highland home. The night of his arrival the scene must have been very grand, with numerous bonfires on the surrounding hills, while Her Majesty's Highland retainers met the Czar and Czarina at the entrance to the avenue of Balmoral and escorted the Imperial pair with lighted torches. The Czar appears to have thoroughly appreciated the sport provided for him in the shape of deer-drives in the surrounding forests. Last Sunday the little parish church of Crathie witnessed the unique spectacle of the Head of the Greek Church worshipping with the Head of the Presbyterian Church of Scotland. The very simplicity of the somewhat austere service and ritual of the Church of Scotland must have been in striking contrast to the gorgeous ceremonial of the Greek Church. To-morrow evening, after dinner, the Czar and Czarina take leave of their illustrious relatives, and, travelling all night, are timed to reach Portsmouth on Sunday evening, where they will be received by the Prince of Wales, and early on Monday morning they sail in their yacht for Cherbourg, where they will be met by the President of the French Republic and escorted by him and his ministers to Paris. The marked change in the tone of the Russian press towards this country is no doubt one result of the visit to Balmoral. 5 p. m. The following startling telegram appeared in this morning's "Daily Mail" from its Vienna Correspondent:

"I am glad to be able to announce that the Powers have agreed upon a pacific settlement of the Eastern Question."

It would be premature, and perhaps unwise, to state the details, but it is permissible to say that the settlement is honourable to all parties, and that ample guarantees have been taken for the future security of the Sultan's Armenian subjects."

Up to this hour I have failed to have it verified. It does not appear in any other paper of authority, but the fifth edition of the "St. James's Gazette" contains the following:

"This statement (of the *Daily Mail*) is confirmed by *England*, which says it has good reason for believing that a very important agreement has been arrived at between the Great Powers, and that all danger of a European war has, for the present, passed away. The interviews between the Czar and Lord Salisbury at Balmoral have borne good fruit, and all outstanding questions between England and Russia have been peacefully adjusted."

ROME, Oct. 2.—According to the *Italia*, General Ferrero, Italian Ambassador to Great Britain, who is at present in Rome, will be charged with a mission to the British Government regarding the Eastern Question.—*Reuter*.

If eventually confirmed it may be no ordinary triumph for Lord Salisbury's diplomacy and a striking answer to the agitators whom I have not spared.

A denial has been received at the India Office of the statement of the "Times" Bombay correspondent relative to the outbreak of bubonic fever.

The Prince of Wales had yesterday the pleasure of seeing his horse Persimmon win its third great race, the Jockey Club Stakes at Newmarket, carrying with them a purse of 10,000 sovereigns. Lord Salisbury on leaving Balmoral paid a brief visit to his nephew Mr. Arthur Balfour at his ancestral home in Haddingtonshire, and is, I believe, to-day, settled for the winter at Hatfield. Mr. Chamberlain is, according to rumour, within a few hours of Liverpool on board the "Germanic," his departure from New York having been concealed on account of the discovery of a Fenian plot to assassinate him. The First Lord of the Admiralty is hurrying home from Biarritz and soon the members of the inner Cabinet will be in earnest conclave.

Yesterday all interested in India must have read with painful anxiety the "Times" telegram from Simla dated Wednesday, stating that there is no doubt that widespread scarcity is probable in the Punjab and certain districts of the North-West Provinces. Then there is the startling news of an outbreak of bubonic fever in Bombay, the details of which are looked for with anxiety by the medical schools here.

Prince Ranjitsinghji. The Cambridge dinner to this celebrated cricketer was a great success. The Prince's health was proposed by Dr. Butler, the eminent master of Trinity, and I think the response made by the Prince will be hailed with no ordinary satisfaction by the natives of every province in India.

Armenian Agitation. This is still being carried on by the screeching and bellowing clerics the Emperor William has described as "monstrosities." It was initiated, as I told you some weeks ago, by the congregational clergyman Dr. Rogers. Not to be outdone, another clergyman of the same denomination---Dr. Horton---gave utterance to some columns of declamatory trash, and next week we are promised a further explosion of the "Nonconformist conscience," when those notorious windbags, Dr. Parker and Price Hughes, are to see who can screech the loudest. In my last letter I had time to refer briefly to Mr. Gladstone's speech at Liverpool on Thursday of last week. As a piece of rhetoric it was a marvellous effort for the aged politician, but the proportion of statesmanship was about one grain to the ton of wordy eloquence. The two Gladstonian morning papers that act as his hacks and henchmen, went wild over it, reminding one of the historic occasion when the populace cried out "'tis the voice of a god and not of a man." The bulk of the continental press has condemned the speech with almost brutal animosity. The "Daily Chronicle" has, however, met with one sympathiser who has the insolent temerity to pat Mr. Gladstone on the back. I refer to the notorious Rochefort.

France. M. Hanotaux, the French Minister of Foreign Affairs, will have his hands full immediately after the visit of the Czar. It is rumoured that the work at Madagascar has to be all done over again and that an expeditionary force of some 12,000 men will have to be sent to endeavour to restore order out of the present chaos. Meanwhile, M. Melne's government has to place to its credit the settlement with Italy of the vexed Tunis question. It is too early to judge what the Italian people will think of what they call the Marquis Rudini's "surrender." Opinion here seems to be that the settlement, while undoubtedly a triumph to France, may prove at the same time of ultimate benefit to Italy.

Egypt. You will see it has been determined, for the present at all events, to make Dongola our farthest point. The forward movement to Kartoum has to be kept in abeyance for financial and other reasons. Meanwhile, the Sirdar is taking every care to make his present position unassailable.

Books, etc. Mrs. Humphrey Ward's new novel, "Sir George Treesady," has, to judge from Mudie's requirements, already secured a position for itself. Two thousand five hundred copies are subscribed for, but the demand is so great that a further 500 or 1,000 have to be secured. Mr. J. M. Barrie is about to leave for America, and, after having arranged for the production of his new comedy-drama, the "Marriage Feast," intends going on to Canada. Many will be sorry to hear that Mr. George du Maurier * is seriously ill and his life hangs by a thread. Messrs. Blackwood and Sons have just brought out Sir Theodore Martin's translation in blank verse of the first six books of Virgil's "Æneid." I notice too, your countryman Mr. Rama Krishna is about to bring out a new volume entitled "Tales from Ind." Lady Henry Somerset and Mrs. Ormiston Chant are about to start an institution for giving oratorical instruction on the following lines:

"Instruction will be given by competent teachers upon the following subjects:---The necessary preparation for public speaking, the choice of subjects, the best attitude of mind of the speaker towards her work, the management of the voice, gestures, dress, hygienic rules to be observed, the necessary tact, how to co-operate with other speakers, how to meet any emergencies that may arise, length of speeches, &c."

* There is a sad story told of Mr. du Maurier: The other day in conversation with a friend, he said, "I cannot cheer up, I have been too successful. Success has ruined me at last."

October 9.

Great Britain. The news in the morning papers yesterday conveying the intelligence of Lord Rosebery's resignation of the leadership of the Radical party, was of a very startling character, and eclipsed, for the time, the marvellous doings in Paris over the visit of the Emperor of Russia.

However much one may differ from Lord Rosebery politically, he is essentially a gentleman, a much higher title to respect than that of being a nobleman. I use the term in the sense you will find given to it by the American Webster in his celebrated dictionary: "A man of good breeding, politeness, and civil manners as distinguished from the vulgar and clownish." That is all true of Lord Rosebery. How can such a man lead a section of the party headed by Labouchere, Dilke and Dalziel? Poor Lord Rosebery has from the first been in a false position. During the life of our gracious and beloved Sovereign lady, the truth will not be known, as to Lord Rosebery's succession to the premiership vacated by Mr. Gladstone. No doubt, he had won the Derby and was determined to be, for a longer or shorter period, Prime Minister of England. No man knows his Shakespeare better than Lord Rosebery. He should have remembered what our great immortal said of "vaulting ambition which o'erleaps itself," and better would it have been to-day had he acted on the grand advice given in Scene II of Act III, in King Henry VIII:---

"Fling away ambition:

By that sin fell the angels."

Lord Rosebery's resignation means the annihilation of the Radical party. Hence its profound importance. The heir of the Plantagenets, as Sir W. Harcourt proudly calls himself, may be the nominal leader, but, as a party, it is now defunct. Since 1886, when Mr. Gladstone, at the instigation of his son Herbert, went in for Irish Home Rule, without consulting his colleagues, the doom of the Radical party was sealed. Poor wretched "tersec flies," like the Editors of the "Chronicle," "Star" and "Sun," have, for the moment, triumphed. No man with any self-respect cares for a moment for the judgment of the first, the Cambridge professor and Irish adventurer, who manipulates the other two. I say nothing of the Editor of "Truth." Every one who is behind the scenes, knows how contemptible his action, as against Lord Rosebery, has been. Henry Labouchere has a very high opinion of himself, but if you wish to know his real character, you have only to go into the city. He and Dilke, with Phillip Stanhope thrown in, will make, with the assistance of Welsh and Scotch bores, a most contemptible party below the gangway on the Opposition side of the House of Commons. The great Plantagenet may be able to control them, but it must not be forgotten that the quondam "Historicus" of the "Times" has no political ballast. Speaking for myself, I may say this, that some ten years ago, I wrote to one of our leading papers, I would never accept Sir W. Harcourt as a leader. I am old enough to remember how he flirted with Mr. Disraeli, and how he insulted Mr. Gladstone in the famous session of 1874. I myself was a member of the Liberal party down to 1886. Mr. Gladstone expelled all those who in that year---so disastrous of the fortunes of the party---preferred to follow the illustrious John Bright. Lord Palmerston had always predicted that Mr. Gladstone would ruin the Liberal party, and to-day he must be a proud man. His sycophancy to the "Chronicle," "Star" and "Sun" has made an end of the party he once had led to such immemorial issues. But the plain common sense of the working classes of England treat with scorn the teaching of your Massinghams, Stuarts and O'Connors. Yet, all the while, they think that they are guiding public opinion!

I notice in the "Times" an account of what is impudently termed the "great national" meeting at Dr. Parker's conventicle, the City Temple. Price Hughes was in the chair, and surpassed his usual flow of truculent insolence. Dr. Parker and Dr. Clifford followed suit. But what astonishes me, I will not say pains me, is the appearance on the same platform of a man of very different calibre, Principal Dykes of the English Presbyterian College. It is not because of his position as the Head of the College, Principal Dykes holds a high and distinctive position, because I understand the students at this great college number the colossal number of sixteen, the Principal's share of earnest students being something like 6 decimal. But Dr. Dykes is a man in an entirely different category from Hughes, Parker and Clifford. These three last are the gods of the counter jumpers and servant girls of London. Dr. Dykes was assistant in Edinburgh to the celebrated Dr. Candlish, I believe he might have been the senior Minister of Free St George's Edinburgh, the proudest living in the Free Church of Scotland. Why he surrendered it, I do not know. He is the equal, if not the superior, of the present incumbent, a wonderful combination, the friend of John Bunyan and Cardinal Newman. However, there it is. Dr. Dykes appeared on the platform with these loud voiced "sons of thunder" and, having consented to lower himself to their level, he must accept the criticism passed upon them. I know nothing in our recent history to compare with the cruelty the "Nonconformist conscience" has

poured upon Lord Salisbury. As Mr. Richards says in the letter I quote above, "it is criminal."

It is worthy of note that Dr. Rogers was not at the "national" demonstration. It is understood he and Dr. Parker have not been on speaking terms since the celebrated controversy in the Congregational Union, on *plagiarism*—Rogers condemning it, and insolently attacking Dr. Dykes as a plagiarist, in which there was not a word of truth. Dr. Parker much to his honour, condemned plagiarism and the plagiarist, but the "Nonconformist conscience" was against him, Rogers triumphed and the plagiarist obtained the post of honour and, no doubt, what he prized much more, the best paid office in the body that has the honour to claim him. I wonder what these clerical demagogues would say to Lord Salisbury if he proposed to dictate to them how they should construct their weekly sermons. No doubt, Lord Salisbury could, if he pleased, produce a far better sermon than any one of them, or all of them put together. But for myself I ask a practical question. As a young man I would have held my own with any one of them in Latin or Greek. Hebrew I never knew and never want to know, so I give them a present of that, and therefore in these archaic languages I give them the pas, but who are they to dictate to me in questions of secular politics? I am not only their equal but better equipped to form a judgment on purely secular questions than they are. But because they are called "reverend" they arrogate to themselves the right to dictate to the illiterate laity, how they shall deal with social and secular questions. I envy your countrymen who think for themselves, and I, asking no more than the privileges enjoyed by the Hindu and Mahomedan subjects of our gracious sovereign, claim the right to judge for myself on this question of the Armenians and to hold in contempt those windbag clerics who are far less competent to form a judgment.

The Lord Chief Justice of England and his visit to America. I have purposely refrained from saying anything about this. There is no doubt, to himself personally, it has been a great triumph. From the date of his first appearance in his famous lecture on arbitration, down to his visit as a guest of the Governor-General of Canada, and his final reception at the Roman Catholic conversatione at New York, the visit has been one of great personal distinction, barring the unfortunate experience at Mr. Bryan's meeting at Tammany Hall. I do not lay any particular value on the hospitality shown him by Lord Aberdeen. This very weak grandson of the unfortunate Premier whose hesitancy and vacillation led us into the Crimean War, always reminds me of Thomas Carlyle's caustic remark about his friend the late Lord Houghton. The *Chelmsford* said, "My friend Monckton Milnes would ask the Lord Jesus Christ to breakfast were He to appear in London." So Lord and Lady Aberdeen one day entertain a gaseous Professor of a Free Church College, on another an eminent Roman Catholic lawyer whose tastes and sympathies are not with the narrow, hide-bound ideas of Haddo House but rather with Newmarket and the tables devoted to whist and picquet. I cannot say the present Lord Chief Justice of England commands my respect any more than his maudlin predecessor. He was at the bar, in spite of his intellectual superiority which every one allows, pre-eminently a "bully," and it did not matter to him, I am sorry to say, whether his victim was a man or a woman, and his peculiar style of terrorizing witnesses was painfully manifest in his treatment of the jury in the historic trial of Jameson and his comrades. Never again will English gentlemen serving as special jurors, allow themselves to be browbeaten as they were on that occasion. Your older readers will understand me when I say, with far greater ability he is singularly cast in the mould of Sir Mordaunt Wells, so well known to Calcutta society as the "Mordaunt Lawson Swell Well" of the late W. H. Abbot's incisive verse. Lord Russell of Killowen is too old to conquer habits formed in a far different school than that in which he now occupies a foremost position, but his legal attainments no one will call in question.

Books. The "Clarendon Press" has brought out the first series of his studies in *Dante*, by Dr. Moore, Principal of St. Edmund Hall, Oxford. It is very highly reviewed. Dr. Moore writes:

"One advantage may perhaps be anticipated from the materials or statistics now for the first time collected and tabulated. They will, I hope, enable students to form a more complete idea than was before possible of the encyclopædic character of Dante's learning and studies, and of the full extent and variety of the literary equipment which enabled him to compose works covering a wider range of subjects than perhaps any other writer, certainly any other very great writer, ever attempted. Our admiration is indefinitely increased when we remember the difficulties under which this surprising amount of learning was amassed; when we reflect that it was in the days before the invention of printing, when books existed only in manuscript, and were consequently very rare and precious, and difficult of access; when there were no helps for study in the way of notes and dictionaries, no conveniences for reference, such as divisions of chapters, sections, paragraphs; above all, no indexes or concordances to help the fallible memory (though, happily, no doubt less fallible than in proportion to the reliance placed upon

it); when, finally, we add to all this the consideration of the circumstances of Dante's own life, a turbulent, wandering, unsettled life, one of which we may truly say "without were fightings, within were fears," one intensely preoccupied with fierce political struggles and anxieties, when 'politics' (if we may use so misleading a term) were a question of life and death to those who engaged in them, and defeat meant, as in Dante's own case, exile, confiscation, ruin. The varied and extensive reading of which Dante's works give evidence would be admirable if it had been exhibited under the most favourable conditions of what we call 'learned leisure' and with the help of modern appliances, but under the circumstances in which Dante accomplished it it is nothing less than amazing. Nor are these considerations materially affected even when all allowance has been made for the occurrence of second-hand references and the occasional use of hand-books of extracts and quotations, or 'Florilegia,' on both of which matters we shall have a few words to say presently.

As Mr. Eliot Norton has truly said, 'Dante was born a student, as he was born a poet, and had he never written a single poem, he would still have been famous as the most profound scholar of his times. Far as he surpassed his contemporaries in poetry, he was no less their superior in the depth and extent of his knowledge.' Dante is a striking example of what Mr. A. J. Butler has well termed the 'incredible diligence' of the Middle Ages. We marvel at this in our life of feverish haste, as we do at the infinite patience and leisure of Indian and Chinese craftsmen. The learning of Petrarch is also very remarkable, but the circumstances of his life were much more favourable for its acquisition than those in which Dante lived."

STRONG ENGLISH WORDS.

WHEN a person says "I suffered excruciating pain," he expresses a fact in the strongest words afforded by the English language. The word "excruciating" comes from *cruz*, a cross, and signifies an intensity of agony comparable only to that endured by one who undergoes the barbarous punishment of crucifixion. There are some diseases which, for a time, cause pain of this acute and formidable nature. To find a relief for it, when possible, is at once the impulse of humanity and the studious desire of science. Two brief examples may indicate what success is attending the effort to both comfort and cure cases of this kind.

"Nearly all my life," writes an intelligent woman, "I have borne the burden of what appeared to be incurable illness. I always felt heavy, weary, and tired. My appetite was poor, and after eating I had a *cruel pain* at my chest and between the shoulders. Frequently the pain was so intense that I was impelled to loose my clothing and walk about the room. My nerves were disordered and impressible, and I was, consequently, easily disquieted and upset. My sleep was habitually bad, and I seemed none the better for spending a night in bed. Eating but little my strength waned of necessity, and I came to be very weak. For a long time I got about feebly and with difficulty.

"In August, 1887, I had an attack of rheumatic gout, which gave me the most harrowing experience of my life. The complaint took its usual course and refused to yield to the ordinary treatment. Through the partial failure of the liver and kidneys dropsy set in and my legs and feet became puffed and swollen. I suffered *excruciating pain* and was confined to my bed for *thirteen weeks*. Remedies of every description were tried but to little purpose."

"My brother, visiting me one day, said he had been cured of an attack of dropsy by a medicine called Mother Seigel's Syrup. I got a bottle from Mr. Hewett, the chemist, in Seven Sisters' Road, and after taking it felt a trifle easier. I continued taking it, and soon the pain and swelling abated. I could eat without pain or inconvenience, and by a few weeks' further use of the Syrup I was not only free from any local ailment, but felt better than I ever did in my life before. Since then I have enjoyed continuous good health, taking a dose of Mother Seigel's Syrup occasionally for some transient indisposition. You are at liberty to publish my letter. (Signed) (Mrs.) Elizabeth Rogers, 42, Plevna Road, South Tottenham, London, September 13th, 1895."

"In January, 1892," writes another, "I had an attack of influenza, and was confined to my bed for *eighteen weeks* thereafter. Subsequently I was very weak, and could get up no strength. What little food I forced down (having no appetite) gave me *excruciating pain*, so that I was afraid to eat. I came to be exceedingly weak and had frequent attacks of dizziness. I was worn almost to a skeleton, and none thought I would recover.

"In June, 1892, Mr. Smith, a friend of ours, recommended me to try Mother Seigel's Syrup, which I at once procured of Mr. George Coombs, the chemist in Hucknall. After taking it for only one week I felt greatly benefited. I could eat better, and food agreed with me. Continuing with the Syrup I grew stronger and stronger, and soon felt even better than before I was attacked by the influenza. You are free to print this statement if you wish to do so. (Signed) (Mrs.) Ruth Halliday, 44, High Street, Hucknall Torkard, Nottingham, March 19th, 1895."

Intense pain may or may not indicate urgent danger to life, but it is hard to bear, and very exhausting just the same. In cases of rheumatic gout (Mrs. Rogers) the pain is caused by a poisonous acid in the tissues, originally produced by the decomposition of food in the stomach—indigestion or dyspepsia. The same poison acting on the liver and kidneys creates the other symptoms mentioned. In the case of Mrs. Halliday the ailment was dyspepsia, which in the first place *invited* influenza, and then remained to torment her.

It is best and easiest to *prevent* pain by using Mother Seigel's Syrup *immediately* when the slightest illness appears.

Sir George Chesney Memorial Committee.**CHAIRMAN :****General Sir Henry W. Norman.****MEMBERS :**

The Marquess of Lonsdowne, Field Marshal Lord Roberts, Mr. George Allen, Colonel Sir J. Ardagh, Sir Stuart Bayley, Mr. William Blackwood, Sir Edward Braddon, Rev. A. G. Butler, Colonel Sir G. S. Clarke, General Sir E. Collen, Sir Auckland Colvin, Sir Julian Danvers, General C. H. Dickens, Sir Mortimer Durand, General Sir W. Stirling Hamilton, Captain Hext, R. N., Mr. A. P. Howell, Sir W. W. Hunter, Lieut.-Genl. McLeod Innes, General Sir Allen Johnson, Sir H. S. King, M. P., Mr. A. Lowence, General Sir R. Low, Sir Alfred Lyall, General Sir O. Newmarch, Sir Andrew Scoble, Field Marshal Sir Lintorn Simmons, Field Marshal Sir Donald Stewart, General R. Strachey, General Sir A. Taylor, Mr. Meredith Townsend, Mr. W. C. Unwin, General Sir George White and General Sir E. Williams.

Memorial**TO THE LATE****SIR GEORGE CHESNEY, K.C.B., R.E., M.P.**

A Meeting was held, on the 24th April, at the Royal United Service Institution, of some of the friends of the late Sir George Chesney, to consider the question of the commemoration of his distinguished services as Soldier, Administrator, Statesman, and Author. General Sir Henry Norman presided, and was supported by Field Marshals Sir Lintorn Simmons and Sir Donald Stewart, and other friends of Sir George Chesney. To carry out the object of the Meeting, a General Committee was formed, which included the gentlemen then present, and in addition, the Marquess of Lonsdowne, Field Marshal Lord Roberts, General Sir George White, Sir Andrew Scoble, Sir Alfred Lyall, Sir H. S. King, Sir W. W. Hunter, Mr. Meredith Townsend, General Richard Strachey, Mr. William Blackwood, and others.

The form the Memorial should take was left for the future consideration of the Committee, as it would depend on the amount subscribed, but the suggestions tended towards a bust of Sir George for the India Office, and a medal for valuable contributions to Military Literature. It was resolved to limit each subscription to a maximum of three guineas.

Subscriptions will be received by Lieutenant-General McLeod Innes, 9, Lexham Gardens, Cromwell Road, London, W.

COMMITTEE FOR INDIA :

His Excy. General Sir George White, V.C., G.C.I.E., K.C.B., the Hon'ble Major-General Sir E. Collen, K.C.I.E., Lieutenant-General Sir W. S. A. Lockhart, K.C.B., K.C.S.I., His Excy. Lieutenant-General Sir C. Mansfield Clarke, K.C.B., Major-General J. Duncan, Major-General G. F. L. S. Sanford, C.B., C.S.I., Major-General G. de C. Morton, C.B., Major-General A. R. Badcock, C.B., C.S.I., Brigadier-General W. G. Nicholson, C.B., Captain J. Hext, C.I.E., R.N., Colonel W. S. S. Bisset, C.I.E., R.E., Colonel T. Deane.

Honorary Secretary :

Colonel T. Deane, Simla.

Subscriptions will be received, in India, by Messrs. King, King & Co., Bombay; Messrs. King, Hamilton & Co., Calcutta; and by the Alliance Bank, Simla, and its branches at Calcutta, Cawnpore, Agra, Ajmere, Darjeeling, Lahore, Murree, Mussoorie, Rawal Pindi and Umballa. Subscriptions are limited to a maximum of Rs. 32 in India.

By order of the Committee,
T. Deane, Col.,
Hony. Secy.

Simla, 18th July, 1896.

"LINSEED COMPOUND," Trade Mark of KAY'S COMPOUND ESSENCE OF LINSEED.

"LINSEED COMPOUND," a demulcent expectorant for Coughs, Colds, and Chest Complaints.

POSTSCRIPT.

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Uckoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Babington Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, K.C.I.E., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sumbhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindu Patriot*, in its primeval days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring of the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters upon record.—The *Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—The *Madras Standard*, (Madras) September 30, 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unfailing instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—The *Englishman*, (Calcutta) October 15, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Railway, from Ceylon says:—It keeps splendid time and never stopped although it sustained hard knocks and jerks. x Dr. H. Moore of Royal Artillery from Poonamallee says:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dindan says:—I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—The watch you sent me some seven years ago is still keeping very good time.

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Re. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Re. 1-8-0. Mr. G. Smith, Salt Inspector from Sanikulia, says: "A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Parandhar says:—For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28 x Pte. H. C. Bishop of L. F. L. Regt. from Kumptee says:—A Corporal offered Rs. 30 for the very same watch. Gentlemen's open faced, keyless *real solid gold watch* Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A. HUTTON, DIXON, 43 & 45 East Bloor St. TORONTO, Canada. *Scientific American*.

VOL. XV.

CALCUTTA, SATURDAY, NOVEMBER 14, 1896.

WHOLE NO. 749.

NAPOLEON.

(From the French of Victor Hugo.)

ANGEL or demon I thou,—whether of light
The minister, or darkness—still dost sway
This age of ours ; thine eagle's soaring flight
Bears us, all breathless, after it away.
The eye that from thy presence fain would stray,
Shuns thee in vain ; thy mighty shadow thrown
Rests on all pictures of the living day,
And on the threshold of our time alone,
Dazzling, yet sombre, stands thy form, Napoleon !

Thus, when the admiring stranger's steps explore
The subject-lands that 'neath Vesuvius be,
Whether he wind along the enchanting shore
To Portici from fair Parthenope,
Or, lingering long in dreamy reverie,
O'er loveliest Ischia's od'rous isle he stray,
Wooded by whose breath the soft and am'rous sea
Seems like some languishing sultana's lay,
A voice for very sweets that scarce can win its way.

Him, whether Pæstum's solemn fane detain,
Shrouding his soul with meditation's power ;
Or at Pozzuoli, to the sprightly strain
Of tarantella danced 'neath Tuscan tower,
Listening, he while away the evening hour ;
Or wake the echoes, mournful, lone and deep,
Of that sad city, in its dreaming bower
By the volcano seized, where mansions keep
The likeness which they wore at that last fatal sleep ;

Or be his bark at Posillippo laid,
While as the swarthy boatman at his side
Chants Tasso's lays to Virgil's pleas'd shade,
Ever he sees, throughout that circuit wide,
From shady nook or sunny lawn espied,
From rocky headland viewed, or flow'ry shore,
From sea, and spreading mead alike descried,
The Giant Mount, tow'ring all objects o'er,
And black'ning with its breath th' horizon evermore !

—Fraser's Magazine.

WEEKLYANA.

SPEAKING at Ulwar city, Lord Elgin justified his tour in the face of the impending general famine in these words :—

"I have seen suggestions that at this moment I ought to be elsewhere. I do not take any exception to these suggestions. I do not resent them in any way. I regard them indeed as not altogether unfriendly, and I can safely say that I have carefully weighed them and considered the arguments they contain, but what I should like to point out is that it is not a light matter to set aside a tour of this description. A tour of the Governor-General has been one of his regular functions for a very long time, since the days when, if he left Calcutta on a journey of this description, he probably had to be absent for a year or so and was accompanied by an escort of several regiments. We are able now owing to the universal peace which prevails throughout the

Empire of India, and owing to the greater facilities of travel, we are able to accommodate our retinue in a few railway carriages, and to pass very rapidly from one place to another, but I venture to say that it is of no less importance now than it was then, that the representatives of the Supreme Government should be known to some extent in all parts of the country. No doubt, as I have said, we can pass through the country more rapidly, but on the other hand there are ever increasing demands of administrative work which tie my colleagues and myself to our office tables and to the Council Chamber for at least ten months out of twelve, and therefore it comes to this that if we do not carry out a tour at the time at which we have arranged to carry it out, that tour must be definitely set aside because, as you are aware, the period of office of a Viceroy is five years, and such is the extent to which the dominions of the Queen-Empress have now reached in India that it takes a very carefully pre-arranged plan to enable him to visit each part or most of the important places in Her Majesty's dominions during his term of office. Therefore, I venture to say that, if a tour is abandoned, it comes to the putting aside of a definite duty which Her Majesty has entrusted to him (applause). I say then that this going on tour is no whim to be undertaken and put down at pleasure."

His words on the famine are :—

"It is a definite duty to be performed and not to be put aside except for good reasons ; and therefore the question arises, Are there any reasons at the present moment why it should be set aside? Well, I had an opportunity, a short time ago, of expressing an opinion on the situation and on the apprehensions of disaster which are entertained, to some extent with reason, with regard to a great part of India. What I ventured to impress upon those who heard me upon that occasion was that it was necessary to be exceedingly cool and deliberate, and not to be hasty in our judgment. At the present moment I see nothing yet to alter my opinion, and what I preach that I wish to practise. (Applause). Nay, more. The reports which have reached me since that time have not been altogether unfavourable. I parted only yesterday (Nov. 6) from the Lieutenant-Governor of the Punjab, and I cannot ascertain from him that as yet any real necessity for relief works has arisen in his province, and that means that no acute distress prevails there at the present moment. In the same way I am in constant communication with the Lieutenant-Governor of the North-West Provinces, who stands in the fore front of this battle, and only yesterday I received from him a telegram which was of a distinctly reassuring character. (Applause.) There can be no doubt that the advances which we have made for the sinking of kutchia wells, and the suspension of revenue to which we have agreed, have put heart into the people, and that they are facing the position in a manner that deserves the greatest credit and gratitude from us. (Applause). They are industriously preparing the land for the crop which ought to be sown at this moment, and we have every reason to hope and believe that if rain should be vouchsafed to us during the next few weeks the area that will be seriously affected by distress in the North-West Provinces will be very much more restricted than is commonly supposed, and in any case the Lieutenant-Governor informs me that no less than forty per cent. of the area of the Rabi crop will be sown and will yield something, he cannot say exactly how much in all cases, but will yield something throughout his Province. And then comes in his telegram, a very significant addition, for he says in the other alternative our arrangements are complete (applause). Now ladies and gentlemen, that is the justification for my going on tour (applause). I remember well a long time ago receiving a bit of advice from a relative of mine, one of the best men of business I ever knew ; and he said 'If ever you are put in a position to carry on a big work if you have good and capable lieutenants, do not try to do their work as well as your own, for you may rely upon it, that if you attempt to do both, you will fail in both.' Now I venture to say that at the present moment the provinces likely to be affected by distress and the provinces of India generally, are in the hands of men as capable as any that ever administered those provinces, and I think I am better not interfering with their work (Applause). But I have one thing also to add and that is that everyone of the friends of mine, for I think I can claim all as my friends, and they know what I mean, are aware that if the time should ever come, when my aid, sympathy and personal presence will be useful to them they have only to let me know, and I shall be there. (Applause). Now ladies and gentlemen, I have perhaps to apologize for speaking what are rather

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

matters of business on an occasion of this kind, but they are matters of such engrossing interest that I felt sure you would not object."

AT Ajmere, Lord Elgin, in replying to the Municipal Commissioners' address, said :—

"I have to express to you my warm thanks for the welcome which you have extended to me to your ancient and historic city, and I am glad to acknowledge your expressions of loyalty and of devotion to the person of Her Most Gracious Majesty the Queen-Empress in whose name I come. I thank you especially for three remarks which you have placed in the forefront of your address. In the first place you have reminded me of a fact of which I cannot be proud, that I come in succession to a line of distinguished men, whom as my predecessors, you have welcomed here. In the second place you have shown me that you have not forgotten the services of my father, and no son can hear a reference of that kind unmoved; and in the third place you have been good enough to express approval of the work or part of the work in which I have engaged. I do not think that words are necessary to recommend public works to anyone who is interested in India. It is true here, if it is true anywhere, that a blessing rests on him who makes two blades of grass grow where only one grew before, but it has been held, and I think rightly, that alongside these great works which we class under the head of irrigation there may be ranked those improvements in the means of communication which the inventions of the last 50 years have put within our reach, and which enable us to penetrate to and deal with the remotest parts of the country."

In the course of the reply, he gave out the famine policy of the Government of India :—

"I am one of those who think that if we have to face the stress of famine we shall look to our railways as our first line of defence; nor is that all, for they will enable us to call to our assistance the services of our best ally. It is the settled policy of the Government of India to do nothing that can amount to an interference with the ordinary course of trade, and it was laid down by one of the most acute of my predecessors who himself had to deal with famine, that though it might be possible to do more than one bunnia no Government could do so much as all the bunnias together. All the stronger therefore is our disposition to follow out the policy thus defined, when we know that the means of communication with all parts of the country have been so greatly improved since his day, and I hope and believe that we shall not look in vain to the private enterprise which we know exists in India if the occasion should arise."

THE general summary of the latest official weather and crop report in Bengal is :—

"With the exception of showers at Bashirhat (24-Parganas), Magura (Jessore), Khulna, Dacca, Faridpur, and Puri, there was no rain in the Province during the week (ending 9th Nov.) The general agricultural prospects continue unfavourable. The winter rice, except in low or irrigated tracts, is withering. In some districts, it is reported, cattle are being turned into the drying rice-plants to graze. The *rabi* sowings are generally retarded for want of moisture; but where irrigation is available, the sowings are progressing and are so far doing well. In Cuttack the insects which had been infesting the rice-plants are gradually disappearing. Locusts have appeared in places in the 24-Parganas and Patna, but have done little or no damage. No cattle-disease is reported except from a few places in Bankura, Midnapore, Backergunge, Saran, Monghyr, Bhagalpur, and Manbhum. Prices are abnormally high and are still rising in many districts, but at Patna the price of common rice is reported to have fallen from 9 to 10½ seers a rupee."

THE Bengal Government has issued the following circular letter to Commissioners of Divisions :—

"Darjiling, the 3rd November 1896.

Sir,—I am directed to forward, for your information, the accompanying copies of a note prepared in the Department of Land Records and Agriculture, under the instructions of the Lieutenant-Governor, giving comparative statements of rainfall month by month, estimated outturn of crops, prices of food-grains, number of persons who came on to relief works or who received gratuitous charitable relief, in the principal districts of these Provinces in which distress prevailed in the different years of scarcity from 1873-74 to the present time. A similar note for other districts is under preparation.

The facts shown in the note and in the half monthly tables of prices in the *Calcutta Gazette* indicate the necessity for very narrowly watching the symptoms of approaching scarcity. Prices are higher now than they ever were in Bengal at this time of the year, although the rise is not perhaps so marked, compared with normal prices at present, as it was on former occasions, while the likelihood of food coming in from provinces other than Burma to supply any deficit there may be in local supplies is greatly diminished by the scarcity that exists throughout the greater part of India. It will be noticed also that the estimated outturn of the winter rice crop is not in some districts less than 8 annas, while owing to the want of rain in the latter part of September and the whole of October, the prospects of the *rabi* crops must necessarily be poor. According to the Famine Commission's report, paragraph 77, Part I, relief will not ordinarily be required where the outturn of a year's crop is above 8 annas, but where it is less, as it is reported likely to be in some districts, there is cause for vigilance.

I am, for these reasons, to request that you will instruct all District Officers of your division to institute systematic enquiries as to the stocks in hand, to watch carefully and report on the prospects of the crops, to make themselves thoroughly acquainted with, and conform to,

the provisions of the Famine Code, and while avoiding, on the one hand, unnecessary expenditure and the creation of unfounded alarm, on the other to be vigilant, and to endeavour to forecast the possibility of the occurrence and effect of a rise in prices or depletion of food supplies, and to have prepared at once estimates of the stocks of food-grain in hand, and of the probable yield of the winter rice and coming *rabi* crops.

Any estimate of the food-supply which does not take into account the stocks in hand must necessarily be defective. In order to ascertain what these stocks are, all District Officers should have enquiries made at once from grain merchants, traders, zamindars and rayyets; they should examine the statistics of exports and imports obtainable from railway authorities and all other sources, and compare them with those of past years; they should also endeavour to form an accurate estimate of the aggregate outturn of the lately harvested *bhadai*, the standing winter rice, and coming *rabi* crops (a) in case rain falls soon, (b) in case there is no rain, and should make an estimate for each district of the requirements for local consumption up to the reaping of next year's *bhadai* harvest, and of the deficit or surplus, as the case may be, of stocks, plus probable outturn of crops, under or over the requirements for local consumption.

For the purpose of making these enquiries and estimates, the services of Subdivisional Officers, Deputy and Sub-Deputy Collectors, Kanungos, Survey and Settlement Officers, Officers of the Opium Department (where there are any) and of the Police should be utilized to the fullest possible extent. Assistance should also be sought from such non-official sources as may be available, the co-operation of leading zamindars, indigo and tea planters and local bodies being invited.

Mr. (now Sir) A. P. MacDonnell estimated in 1875 the stocks in hand at the beginning of the famine of 1873-74, the aggregate yield of crops of that year, and the requirements for local consumption, and thus worked out the deficit in the food-supply which had to be imported into districts where scarcity prevailed. You will observe from a perusal of Sir Antony MacDonnell's report on 'The Food-grains and Food-supply of Behar and Bengal' and of the Famine Commission's report that the quantity of grain imported by Government in that year was about 480,000 tons, or more than one crore and 30 lakhs of maunds. It is no doubt a fact that the importations of that year were far in excess of the actual needs of the time; but though the deficit of the present year in these provinces will probably be nothing like that quantity, the question becomes one of serious importance where and how such amount of grain as may be required is to be procured. In order to throw light on this question, District Officers should now, by a similar method to that adopted by Sir Antony MacDonnell, endeavour to work out the probable amount of the deficit, if any, or surplus food-supply, as the case may be, of the present year in their several districts, so as to assist the mercantile community in forecasting approximately the extent to which it may be profitable for them to import grains from Burma, California or other foreign countries. Sir Antony MacDonnell's estimates of stocks in hand were based on *a priori* considerations, but the estimates of stocks now called for should, so far as possible, be based on the actual facts so far as they can be ascertained.

Government, in accordance with the policy recommended by the Famine Commission, does not now intend under any circumstances to import grain as it did in 1873-74, or otherwise to interfere with private trade, but adheres fully to the policy of saving life by opening relief works and giving a sufficient wage to enable labourers to purchase food in the local markets, and also by giving gratuitous charitable relief to those who are unable to work. It becomes, therefore, a matter of importance that the public should have placed before it, as soon as possible, the best available information regarding the probable requirements of the country in the matter of food-supply from the present, till such time as the wants of the people are again likely to be supplied from ordinary sources in August or September next. It is believed that the coming rice crop in Burma is likely to be a good one. In ordinary years about a million and four hundred thousand tons of rice are available for export from that province, and it may be expected that the same quantity will be available this year, so that there ought to be no difficulty in supplying such deficit as there may be in Bengal by the operations of private trade.

I am therefore to request that you will give your early attention to the matter, and that you will furnish Government on the earliest possible date with a report, based on the enquiries now to be made, showing for each district or your division, as far as possible—

1st.—The amount of stocks of food-grains believed to be in hand.
2nd.—The aggregate outturn of food-supply expected from the coming winter rice and *rabi* crops, (a) in case there should be rain in November, and (b) in case there is none.

3rd.—The total requirements for the consumption of the entire population for the coming year (*i.e.*, till August or September next.)

4th.—The probable deficit in each district to be imported, or surplus, as the case may be, available for export.

As the Famine Commission remarked in Part III of their Report (to pages 104 to 161 and to the whole of Part I of which I am to invite your special attention), one of the most serious lessons learnt from the experience of the famine of 1873-74, besides the importance of agricultural knowledge, was the danger of erroneous forecasts which, if they err, as they did in 1873-74, on the side of exaggerating probable distress, may cause the State enormous loss, while, on the other hand, they may, if they err by being too sanguine, result in avoidable loss of human life. In making the forecast and estimates now called for, it should be partially remembered that personal impressions or beliefs are of little value, and explicit reasons should, therefore, be given for the figures which may be furnished. The statistics published by the Imperial Provincial Departments of Land Records and Agriculture, which have been circulated and will be found in all Collectors' offices, give the areas under each crop; the normal outturn per acre is given in Sir Antony MacDonnell's report. The requirements for consumption of the total population can be calculated with tolerable

accuracy. With these data and the careful estimate of the stocks in hand and the outturn of the winter rice and *rabi* crops, though accurate estimates of the food deficit or surplus of each district are not possible, there ought to be no great difficulty in preparing approximate estimates of the requirements of the province if proper care is exercised in the preparation of them.

To save time copies of this circular have been sent to all District Officers direct. I have the honour to be, Sir, your most obedient servant, M. Finucane, Offg. Secretary to the Govt. of Bengal."

WE give an abstract of the statements annexed to the Bengal letter :

PATNA.—Normal rainfall 42.86 inches. In 1896-97 30.70 from April to September.

Common rice at 10 seers per rupee. Normal price at 17 seers.

GYA.—Normal rainfall 43.20 inches. In 1896-97 from April to September 33.89.

Common rice at 9 seers. Normal price at 15 seers. Famine in 1873-74 and scarcity in 1891-92.

SHAHABAD.—Normal rainfall 41.91 inches. In 1896-97, 29.56.

Common rice at 10 seers. Normal price 14 seers.

Famine in 1873-74 and scarcity in 1888-89 and 1891-92.

SARAN.—Normal rainfall 42.56 inches. In 1896-97, 22.32.

Common rice at 10 seers. Normal price at 15 seers.

Famine in 1873-74.

CHAMPARAN.—Normal rainfall 49.55 inches. In 1896-97, 27.94.

Rice at 11 seers. Normal price 17.

Famine in 1873-74 and scarcity in 1891-92.

MUZUFERPUR.—Normal rainfall 45.98. In 1896-97, 34.26 inches.

Rice 9 seers. Normal price 14.

Famine in 1873-74 and scarcity in 1895-96 and 1891-92.

DARBHANGA.—Normal rainfall 47.37. In 1896-97, 37.91.

Rice 9½ seers. Normal price 15½.

Famine in 1873-74 and scarcity in 1875-76, 1888-89 and 1892.

MONGHYR.—Normal rainfall 45.31. In 1896-97, 40.79.

Rice 9½ seers. Normal price 14½ seers.

Famine in 1873-74 and scarcity in 1888-89 and 1892.

BHAGALPUR.—Normal rainfall 48.91. In 1896-97, 34.98.

Rice 11½. Normal price 15½.

Famine in 1873-74 and scarcity in 1889 and 1892.

PURNA.—Normal rainfall 71.95. In 1896-97, 47.63.

Rice 10. Normal price 17.

Famine in 1873-74 and scarcity in 1892.

DINAJPUR.—Normal rainfall 62.73. In 1896-97, 44.02.

Rice 10½ seers. Normal price 13½.

Famine in 1873-74 and scarcity in 1892.

No rain in October in any of these districts.

A PRIVATE letter says :

"In East Bengal, everywhere there is a cry of famine. All the crops have withered. How we shall preserve our lives, God alone knows!"

THE stock of rice in and around Calcutta, in the 1st week of November was about 12½ lakh maunds. In the 1st week of November 1895, it was 17-1/7 lakhs.

THE *Civil and Military Gazette* devotes a leader to Dr. Jogendra-nath Bhattacharya's last book "Hindu Castes and Sects." It is headed "A Hindu Iconoclast" and opens with the words—

"Apart from its importance, upon which opinions will vary, as a contribution to the philosophy of religion—in which relation the volume demands a more detailed review than can be given in this column—a work which has just been published in Calcutta on 'Hindu Castes and Sects' certainly deserves to be ranked as one of the most remarkable and original books ever penned by a native of India. The author is Mr. Jogendra Nath Bhattacharya, a high caste Brahman, President of the College of Pandits at Nadiya in Eastern Bengal, and already known as an acute and learned commentator on Hindu law."

In the course of the article, it remarks :—

"But even if his philosophical theories regarding the nature and origin of religion in general be held to be mistaken, his evidence re-

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

garding the character and practice of Hindu sects must either be proved to be false or be given its due weight."

"The perusal of such a book as Mr. Jogendra Nath Bhattacharya has written, ought to make Oriental enthusiasts like Professor Max Müller and Sir Edwin Arnold careful how they express themselves."

"It may safely be said that a more extraordinary revelation of craft, charlatanism, immorality, credulity and superstition than is here made in connection with many of the Hindu sects which flourish at the present day, could scarcely be conceived."

The concluding sentences are :—

"In a word, no more scathing exposure of any system masquerading under the name of religion has ever been given than this work of Mr. Jogendra Nath Bhattacharya affords. It is no doubt a work of pure demolition : but it is none the less welcome as a sign of a healthy reaction against the worst features of Hinduism ; and even where we may differ from his philosophy, it is impossible to withhold admiration for the moral courage, learning and superiority to mere tradition displayed by the author."

AT the George Hotel, Crawley, on August 10, an inquest on the body of Annie Brockbank, a domestic servant at Buchan Hill, the residence of Mr. Philip Maitland brought to light that a number of servants including her had fallen sick after supper. The illness was attributed to the rabbit pie taken by them. Dr. Thomas Stevenson, analyst to the Home Office, stated that he had received from the police 4½oz of cooked rabbit which was in a highly putrid state, and similar to that found in the deceased's stomach. There was no sign of corrosive or irritant poisoning and, in his opinion, death was due to micro-organisms, or bacteria which were present to a very large extent in the rabbits used for the pie. He had administered portions of the poison found in the stomach of the deceased to several animals, but had found that it had not had any injurious effect upon their constitutions. The result of his examinations opened up a very important enquiry as to how far rabbits were healthy and fit for food. In the course of his experience he had found large numbers of live rabbits affected with bacteria to such an alarming extent that they frequently died in consequence. The organisms were generally killed by cooking, but this could not always be taken as a safeguard. He had not the least hesitation in saying that the death of Brockbank was caused by the affected rabbits.

The foreman : Do you think any importance can be attributed to the fact that the crust of a pie was not perforated.

The coroner : The crust was perforated. The idea that the crust of a pie should be perforated is an absurd one, and has long been exploded.

The jury found that death was due to unwholesome food—*vis.*, rabbit pie affected with bacteria.

NOTES & LEADERETTES,

OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

AN officer, formerly in the Austrian service, has been arrested at Suakin disguised as a Dervish attempting to make his way to the Sudan.

A REVIVAL has taken place in business in America consequent upon the presidential election. The revival is remarkably wide-spread. Idle mills and factories are being re-opened. Many factories are working over-time, and mills employing 100,000 men have re-opened. There is a marked increase in the demand for wool and cotton.

FOLLOWING up the Armenian debate in the French Chamber of Deputies, the Sultan sent his Secretary to M. Cambon, the French Ambassador, who urged the necessity for measures which would reassure Europe.

The Turkish Ambassador in Paris has now informed M. Hanatoux that the Sultan has agreed to eight reforms, including the release of innocent prisoners, the protection of peaceable Armenians, the prevention of acts of violence, granting relief to the chief sufferers, and reparation to the damaged Catholic convents.

M. HANATOUX expressed his thanks, and said M. Cambon would be instructed to watch the application of these reforms.

IN his speech at Edinburgh, Lord Selborne said there was no possible excuse for Great Britain shirking her engagement to evacuate Egypt, but when the time came and Great Britain's work was done, Europe, and particularly France, would be bound to recognise that Great Britain had a superior interest with which no other nation could possibly compete. It was, he continued, preposterous to suppose that France could hold the same position towards Egypt as Great Britain that had expended blood and money in regenerating Egypt. The object of the Dongola Expedition was to make that province a fresh base for operations and let disintegrating forces among Dervishes go on. Then, when the time was ripe, and everything ready, to make a final advance on Khartoum. The British policy in Egypt would be neither scuttle nor repudiation, but doing duty in common good faith.

LORD Salisbury, in his speech at the Guildhall banquet, on Nov. 9, said :

We have had many advisers as to the method whereby we should induce the great Powers to adopt our policy. The favourite advice, wherein Mr. Courtney and Mr. Morley both join, is that we should address ourselves to convince those Powers of our absolute virtue, and for that purpose begin by an action of splendid renunciation, and abandon the territory we now occupy. They seem to think that when we have done that then the Powers and the world will be forced by sympathy and influenced by their desire to recognise the merit of such a self-denying principle, and will at once adopt the course we desire them to follow. That is a pretty, almost an idyllic, conception of the conditions of international policy, but I confess I do not believe it. At all events, I may say we do not see in the present problem in the East any cause for abandoning the policy we have hitherto pursued, or relinquishing a single acre of the land which we at present occupy. Lord Wolseley has referred in eloquent and sympathetic words to the campaign recently conducted in Egypt by Major-General Kitchener. In the language of eulogy he has employed we heartily concur. Undoubtedly it was not on a large scale, and the military danger incurred turned out in the end less than was expected, but for judgment in conception, for elaborate, careful and judicious arrangement, for tenacious adherence, notwithstanding every discouragement and every obstacle to the plan originally laid down, and for a brilliant achievement of the practical object in view, General Kitchener's performance will challenge comparison with any in our annals. Allow me to say one word on behalf of another great officer. It is no derogation of the very great merits of General Kitchener that I claim part of the praise for this successful campaign for Lord Cromer, by whom he was ably seconded.

Continuing his speech, Lord Salisbury said he was glad that the nation now understood that isolated action in regard to Turkey was impossible. The European concert seems at the present time better fitted than ever before to achieve the desired purposes. He concurred in the views of M. Hanatoux, and hoped to continue to co-operate cordially with the Triple Alliance with which he was always in sympathy.

Lord Salisbury strongly protested against the idea held by Prince Bismarck that there existed a necessary and permanent antagonism between Russia and Great Britain, as he had good reason to believe that Russia had the same objects in view as ourselves regarding the events in Turkey. Lord Salisbury further said that while he foresaw no difficulty in the Powers' exercising force, it is through the Sultanate alone that they can ameliorate the lot of Christians and Mussulmans in Turkey.

Lord Salisbury announced that the Venezuela dispute has been settled in conformity with the suggestions made by the United States Government, namely, to apply the principle of civil law whereby the validity of title is admitted after a certain lapse of time.

It has been agreed that each country will appoint two delegates to arbitrate in the Venezuelan dispute. These four will select a fifth, who

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 19, SOUTHAMPTON BUILDINGS, HOLBORN, LONDON.

will probably be the king of Sweden. The treaty defines sixty years' undisputed occupancy as validating ownership. It also comprises an agreement to arbitrate in future disputes between America and Great Britain.

SIR Charles Dilke, speaking at Enfield, deprecated a general partition of Turkey, but if it became necessary to exercise pressure on Turks, he advocated the ceding to Greece of first Cyprus and then one other island in the Levant. Sir Charles insisted that Great Britain was pledged to evacuate Egypt, her occupation of which would always hinder concerted action on the part of Russia, France and Britain.

THE Porte has officially published a scheme of reforms for the entire Turkish Empire, and also orders the Vali to execute the same immediately.

THE *Novosti* reports that during the war China offered Formosa to England, but Lord Rosebery declined to accept it.

IT is reported that the Transvaal has decided to claim one million sterling from the Chartered Company as an indemnity for the Jameson raid.

SEVERAL Russian papers warmly appeal to public charity on behalf of the famine in India.

LORD George Hamilton, speaking at Acton, said that he felt confident that the Indian Government was able to cope with the famine of whatever magnitude.

PRINCE Obolensky, an expert in agriculture, proposes to export cheap Russian wheat and rye, abounding in Russia this year with prices extremely low, to India.

THE Viceroy left Ulwar on Monday night and arrived at Ajmere on the morning of Tuesday. There was a gathering of native chiefs and British officials at the railway station to receive Lord Elgin. The Municipality presented him an address. After replying to it and inspecting the Merwara battalion drawn up outside the station, he drove to the Residency overlooking the Anasagar Lake. During the day he received and returned visits from the Chiefs of Bundi, Kisengarh, Tonk and Shahpura. The lake and the surrounding heights were illuminated at night. It was a brilliant scene. Next morning, Lord Elgin walked up to the top of Taragarh, 1,200 feet above the city, from which he took a view of the surrounding country. On his return, he visited the place sacred to both Hindus and Mahomedans. On the 11th, Lord Elgin was at the Mayo College to distribute prizes to the students. From Ajmere to Udaipur. The Maharana was all hospitality.

OUR correspondent in the Balasore district writes under date the 11th November :

"In my last I wrote to you that *rabi* crop could not be cultivated for want of rain. Since then, by order of Mr. B. De, the District Magistrate, all temporary *bunds* constructed by the neighbouring *Z-mindars* across the river Gomai on the north-east of Ancoora, have been removed ; and rayyets have plenty of water for cultivation of *Rabi* as well as for preserving *Aman* crop. But it is too late. Nearly 2/3rd of the crop has already dried up. The crop in Pergana Verah, 20 miles south of Ancoora, has suffered much, and the probable outturn is not expected to exceed an average of 2 annas. The rayyets are already forsaking their homes and going to Balasore, Calcutta and other places in search of employment.

Below is an instance of magistral vagary.

A gentleman went to Puri to draw Rs. 3,056 and odd which had been in deposit in the Collectorate. The Collector had passed orders for payment and the cheque had been presented to the Treasury, but up to 6 in the evening no payment was made, and when the gentleman asked the Treasurer for money he was insulted. A notice under Section 424 of the Civil Procedure Code was served on the Treasury Officer but without any effect. The matter being represented to the Collector, he, I hear, admonished the Treasury

Officer, who has now thought fit to apologize for his rude behaviour. I enclose the letter :

'Sir,—I am in receipt of your letter complaining of having been insulted by me when in September last you came to the Puri Treasury to take payment of some money which was in deposit in the Collectorate.

In reply I am to say that I am very sorry that I used the expressions of which you complain and that I retract them, as you desire.

I remain yours truly,

NAYANANJAN BHATTACHARJIA.'

This Deputy had been at Nilphamari, whence he was transferred for insulting the Pleaders."

A PROPOSAL of the General Committee of the Calcutta Corporation to compel vendors of sweetmeats to keep their goods in glass-cases to preserve them from dust and other contamination, has been negatived by the Bye-laws Committee to which it was referred. That Committee came to the conclusion that there was no provision of the law under which a byelaw of the kind could be passed. Are the Committee sure that the byelaws in force are all according to the Municipal Act?

ONE of the earliest cold weather visitors to Calcutta is the Maharaja of Hill Tipperah. He has grown very fond of it. He has been absent from his territory since his last visit to this city, passing the hot months at Kurseong. Will he go back to Agartala again?

MR. Henry Luttmann-Johnson, the Commissioner of the Dacca Division goes home on 18 months' leave. It is believed that he will not return to India. He is very popular at Dacca, and his absence will be felt greatly. Like Mr. Skrine, he has been more than an energetic official wherever he has been. Like Mr. Skrine too he enters into the feelings of the people, sympathises with their sorrows and promotes their happiness by private good offices. The Dacca Division is grateful to him for his many kindnesses, and for his efforts, through parties at his house, to unite the two races—the governing and the governed—into closer bonds of fellowship. Babus Ruplal and Raghu Nath Das of the Dacca city ought to be specially grateful to him for being saved from ruinous litigation. Mr. Luttmann-Johnson interposed in their quarrel and, without coming out of it with a bloody nose, rescued them from the clutches of law and lawyers.

Mr. Luttmann-Johnson joined the Indian Civil Service on the 5th August 1867, arriving at India on the following 4th December. Having been Assistant Magistrate in Bengal and Behar, in April 1872, he was appointed Private Secretary to Sir George Campbell. From October 1873 to February 1874, he performed the duties of Under Secretary to the Government of Bengal, Department of Scarcity and Relief. His services were then transferred to Assam. He was brought back to Bengal by Sir Charles Elliott and appointed Commissioner of the Dacca Division in November 1892. Dissatisfaction, due to disappointment, was expressed at that appointment and Sir Charles Elliott taken to task. But Mr. Luttmann-Johnson has justified the selection and there is general regret at his retirement.

To mark the sympathetic administration of the Division by Mr. Luttmann-Johnson, the liberal Raja Rajendra Naryan Roy, of Bhowal, has subscribed Rs. 5,000 for a special ward in the Mitford Hall compound to be called after the Commissioner. The Raja has also offered to the Dacca Northbrook Hall Library a portrait in oil of Mr. Luttmann-Johnson.

THE morning papers report that Mr. Skrine, Commissioner of the Chittagong Division, has taken two months' leave. The fact is, that he has rejoined his post after 7 weeks' stay at Simla. In August last, after his return from Fort Lungleh, in Lushai land, he caught jungle fever and took leave. He arrived at Chittagong from Simla on the morning of the 11th.

MR. Skrine has written a pamphlet on the Roman Catholic Mission to the degraded Feringis of Chittagong. It is entitled "The Monastery of S. Scholastica being a brief account of the educational work carried on at Chittagong by the Sisters of our Lady of the Mission." Be-

longing to a different creed, the pamphlet is another evidence that Mr. Skrine recognizes and admires intellect and goodness of heart wherever they are found.

MR. Cotton, the Chief Commissioner elect of Assam and the probable next Lord of Belvedere, may be said to have opened the Calcutta season. A deputation headed and tailed by Maharaja Gobindalal Roy, the representative, according to Mr. Cotton, of Mofussil Zemindars, waited on him at Simla to bring him down and to apprise him of the preparations making at Calcutta at the instance of his admirers for benefits past and prospective, and escorted him down to Benares, where the two friends parted company to meet again at Calcutta. Invitations have been issued for an Evening Party, at the Dalhousie Institute, for Monday next, to meet Mr. H. J. S. Cotton, C.S.I. There will be a performance by Father Lafont on X rays.

For the pains taken by the Raja, he was rewarded with an interview with the Viceroy.

MR. Mackworth Young, late Secretary to the Punjab Government, at present Resident in Mysore and Chief Commissioner of Coorg, is spoken of as the next Lieutenant Governor of the Punjab. He kept Sir Lepel Griffin out of a post to which he himself is now on the way. He, however, goes home to come out as the Lieutenant Governor. He will be no unworthy successor of Sir Denis Fitzpatrick.

UNDER the orders of the Government of India, a Committee will, early in December, assemble at Lungleh, to consider various matters connected with the administration of the Lushai country. The Bengal, Burma and Assam Local Governments interested in Lushai affairs will be represented on that Committee.

MR. A. H. S. Reid, Barrister-at-Law, has been appointed to succeed the late Mr. H. T. Rivaz as Judge of the Chief Court, Punjab.

REIS & RAYYET.

Saturday, November 14, 1896.

THE PLAGUE—IS IT CONTAGIOUS?

WITHOUT taking into account the Simpsonian plague in Calcutta, let us examine the report on the bubonic plague which occurred at Hongkong in 1894. A report by Surgeon-Major H. E. R. James, F.R.C.S., is published in the "Calcutta Gazette" of October 14. It is an authoritative, because official, statement. Without entering into historical details, we will take up the practical solutions arrived at in the document. We read:—

It (the plague) shows a tendency to recur in places where it has been once rife, and to be carried by trade routes from these centres. The considerable communication of crusades and pilgrimages between Christian Europe and Palestine on the one hand, and Mahomedan Asia and Arabia on the other, the former during the Middle Ages and the latter later, have probably served to convey the germs to the homes of pilgrims, as is the case with cholera. A careful consideration of the events of the various epochs would, I think, trace its carriage in every case to the affected district from one or two spots where it is, or has been, endemic, e. g., the Euphrates Valley and Southern China. It appears to be confined to the northern hemisphere and only to flourish between 20° and 40° north of the equator, and not to have existed in the new world at all hitherto.

The writer is not exhaustive and is not always definite in his conclusions. His assertion about plague revisiting its old haunts, is not justified by the experience of Europe where it has ceased to recur since 1841. The crusades being a thing of the past Dr. James falls back upon the pilgrimage of Mahomedans to Arabia. Trade has also been added to as a means of spreading the disease. It is unfortunate that Dr. James follows the footprints of Mr. Ernest

Hart in his uncorroborated theory of the march of cholera from Asia to Europe. Instances after instances have happened in England, France and Germany, where searching enquires failed to trace transmission from infected places. In many outbreaks, the cases were believed to be new ones, though the theory of spontaneous generation does not gain favour and is dying out. The present visitation of plague in Bombay, is not traced to China or Persia. For, the Euphrates Valley and Southern China are taken to be the centres for spreading contagion of bubonic plague, in the same way as India and Egypt are taken to be the home of cholera.

From A.D. 98, the date of bubonic plague in Libya and subsequently in China, to 1878, most countries of the world had it, but not India. The plague in Gour and the devastation of Barendra Bhumi in Northern Bengal, were probably due either to malaria or cholera and not to the disease whose characteristic symptoms are glandular enlargements. "Black Death" seems to be the "Kalaazar" of Assam. Great difficulty is still found in distinguishing these two diseases, because no definite symptoms are available in ancient records. It would not, therefore, be safe to describe all plagues as bubonic. In Charak-Samhita, the oldest medical literature, of about 4,000 years, the chapter on destruction of inhabited localities points to scourges other than bubonic fever.

It is impossible to find any explanation why India was not so long attacked, when it was connected by trade with all Asia and Europe, both by sea and land.

It is said that in 1876-77, in the mountain villages of Kumaon, in northern India, plague occurred among people occupying houses in which cattle, grain and human beings were packed in as in Kurdistan. But no authentic record describing the symptoms can be found. Therefore, there is no knowing what plague that was.

Bubonic plague has ceased to be endemic in Europe and Egypt. Excluding the Euphrates valley and Southern China, the disease appears to have been local, produced by unknown conditions. Writing about the Lower Euphrates epidemic of 1874-77, W. H. Colvill says that the affected huts

are on ground which is a foot or two lower than the ground than the surface of the water in spring; and the ground is so saturated with water, that the refuse of the village is neither absorbed nor can it be evaporated, for it acquires fresh moisture from the ground, and this refuse acquires the form of a bluish-black oily fluid which surrounds the huts and covers the paths, and stains the walls two feet from the ground, and, in fact, the village is in such a state of filth that it requires to be seen to be believed.

According to Castaldi,

Whatever is most afflicting in poverty, whatever is most revolting in filthiness, is accumulated, as if designedly, around these infected dens, in the interior of which live, or rather vegetate, from fifty to sixty men, women, and children. The cultivation of some plots of ground in the neighbourhood furnishes these unfortunates with insufficient nourishment.

In Southern China, principally in Yunan, the same filthy habit has been observed. Dr. Janson, of Tokio, in a recent number of *Archiv fur Wissenschaft und Thierheilkunde* writes about the cause of the outbreak. He finds that the disease always breaks out among lower animals. Rats, mice and swine are especially susceptible to it. The diseased animals are often consumed by the Chinese as food, and so they are attacked. A decree has been published prohibiting the use of swine meat. In the last epidemic in Yunan, it first attacked the rats, then fowls, swine and goats, and lastly horses and cattle.

The Chinese are so filthy that swine can be found everywhere in their houses. The lower classes seldom wash their clothes.

Dr. James lays stress on the following facts to prove the contagious character of the disease. 1. The disease is endemic in the province of Yunan, South China, where generally all cases recover. It becomes virulent after a prolonged drought. People residing in the same house with the victims very generally contract the disease. 2. Places having no communication but similarly situated as regards atmosphere and geological formation, do not suffer. 3. The communicability of the disease was proved by the attack on Honkong from Canton, and from Hongkong on the surrounding dependencies. 4. The communicability of the disease by human intercourse is proof against any atmospheric or telluric theory. 5. At the commencement of an epidemic, the cases were, almost without exception, fatal. 6. The bacillus discovered by Dr. Kitasato has been found in 25 out of 30 cases. The inoculation of a pure cultivation of the bacillus proved fatal to all animals. The symptoms and pathological appearances were identical in all cases.

There are facts, however, which prove the contrary.

It has been seen why the disease prevails in an endemic form in the Euphrates valley and in Yunan. It is the filthy home and surroundings of the inhabitants which keep up the life of the plague. With this fact in view, it can also be determined why the disease has been exterminated from Europe and Egypt. Plague has causes, and with their discontinuance it disappears.

The most important question connected with bubonic plague is, whether it is a contagious disease? Most writers, without sufficiently examining the facts, follow each other in declaring that it is so. Among actual observers there are not wanting men who deny its contagiousness, such as Dr. M. H. Burrell, Deputy Inspector-General of Hospitals in Malta, Dr. Murray of the Indian Medical Service, Dr. Aubert Roche, a Medical Officer of Egypt, Dr. Cloti Bey, W. H. Colvill, Giovanni Cabiadis and others. Cabiadis called the disease *miserie morbus*. The experience of Dr. M. L. Jelovitz, a homœopath, a man of wide experience, gathered in

The Indian Association for the Cultivation of Science.

210, Bow-Bazar Street, Calcutta.

(Session 1896-97.)

Lecture by Babu Ram Chandra Datta, F.C.S., Monday, the 16th November, at 4-15 P.M. *Subject*: Occurrence, Sources, and Preparation of Hydrogen.

Lecture by Babu Ram Chandra Datta, F.C.S., Tuesday the 17th Inst. at 4-15 P.M. *Subject*: Physical and Chemical properties of Hydrogen.

Lecture by Babu Ram Chandra Datta, F.C.S., Wednesday, the 18th Inst. at 4-15 P.M. *Subject*: Preparation and properties of Oxygen.

Lecture by Babu Rajendra Nath Chatterjee, M.A. Wednesday, the 18th Inst. at 7 P.M. *Subject*: Force and Motion.

Lecture by Babu Ram Chandra Datta, F.C.S., Thursday, the 19th Inst. at 4-15 P.M. *Subject*: Consideration of the Oxides—Ozone.

Lecture by Babu Ram Chandra Datta, F.C.S., Saturday, the 21st Inst. at 3 P.M. *Subject*: Preparation and properties of Hydrogen Monoxide.

Admission Fee, Rs. 4 for Physics, and Rs. 4 for Chemistry; Rs. 6 for both Physics and Chemistry; Rs. 4 for Physiology; Rs. 4 for General Biology; Rs. 6 for complete course of Physiology and Biology. The charge for a single lecture is 4 Annas.

MAHENDRA LAL SIRCAR, M. D.,
Honorary Secretary.

Nov. 3, 1896.

many countries, who has just come to Calcutta to practise, and to whom we give a hearty welcome, and who resided in Mesopotamia, during the epidemic of 1876, and was the first to detect the Bombay plague, is to the same effect. The plague of London in 1865 was called by many the *Poor man's Plague*.

The word "contagion" is derived from the Latin *con* and *tagio* to touch. It is defined to be the communication of a disease by contact with a person labouring under it, as distinguished from infection, which last word is used to signify transmission through the medium of air without actual personal contact with a diseased person. Sometimes the word contagion is used without this distinctive signification. Contagion, again, is of two kinds—*immediate* or *contactical* contagion, the first being produced by actual contact, and the other, *mediate* or *remote*, being communicated by the air. Infection is sometimes used in a more extensive sense, to include miasmata or other causes of diseases not coming from human beings, but rising from marshes or from any other source. Some use the two words contagion and infection as synonyms. Crabb thus discriminates between them:

Some things act more properly by *contagion*, others by *infection*: the more powerful diseases, as the plague or yellow fever, are communicated by *contagion*: they are, therefore, denominated *contagious*: the less virulent disorders, as fevers, consumptions, and the like, are termed *infectious*, as they are communicated by the less rapid process of *infection*: the air is *contagious* or *infectious* according to the same rule of distinction: when heavily overcharged with noxious vapours and deadly disease it is justly entitled *contagious*, but in ordinary cases *infectious*.

A distinction is also made between *contagious*, *epidemic* and *pestilential*:

• The *contagious* applies to that which is capable of being caught, and ought not, therefore, to be touched: the *epidemic* to that which is already caught and circulated, and requires, therefore, to be stopped; the *pestilential* to that which may breed an evil and is, therefore, to be removed: diseases are *contagious* or *epidemic*; the air or breath is *pestilential*.

In Dr. Quain's *Dictionary of Medicine*, we find:—

The word *contagion* is applied in pathology to the property and the process by which, in certain sorts of disease, the affected body or part causes a disease like its own to arise in other bodies or other parts; and the Latin word *contagium* is conveniently used to denote in each such case the specific material, shown or presumed, in which the infective power ultimately resides.

According to this authority,

The rationale of the word *contagion*, as now used, is that the property is understood to attach itself essentially to a material contact; not necessarily that, when infection is spread from individual to individual, the contact of the individuals must have been immediate; but that in all cases there must have been such passage of material from the one to the other, as was in itself at least a mediate contact between them. And similarly, in those very instructive illustrations of the process of contagion which are furnished within limits of a single diseased body by the propagation of disease from part to part of it, we can in general easily see that infection advances from part to part, either in proportion as part touches part, or in proportion as the one receives from the other the outflow of lymph or blood or secretion.

But these definitions are untenable in the present advanced stage of bacteriology and the phagocytic (bacteria-destroying) power of blood. Since the discovery, by Pasteur, of the process of fermentation, caused by *torula*, the modern evolution of bacteriology commenced. It has been strengthened by the enunciation of the principle of immunity of persons from diseases. Metchnikoff found the white cells of the blood capable of devouring the diseased organisms. Buchner contends that that power resides more in the liquid serum than in the white cells. To this self-purification of blood is attributed immunity from disease. The predisposition to be attacked by any

malady becomes possible when a person loses this purifying property of the blood. Then he is liable to be the victim of any disease by contact. Therefore, every disease is contagious, more or less. It has not been proved that a person is susceptible to any particular disease while impenetrable by others. It seems, however, possible, that in a particular state of health one may be liable to be attacked by a disease if placed in a locality where it is prevailing or when coming in contact with diseased persons.

The theory of immunity does not necessarily rest on the genesis of bacteria. It is believed in where there is no such discovery. And it still applies to diseases not yet found due to bacteria, as hydrophobia, small-pox, &c.

Recurrence of a disease proves that one has not only lost one's immunity but has made oneself liable to it by the bad state of any of the organs. Persons simultaneously exposed to cold will not suffer from the same disease. Some will get catarrh, others cough, a few bronchitis, pneumonia or pleurisy, the rest may suffer from dysentery or rheumatism. A particular disease chooses a particular organ.

The immunity supposed to be secured by injection of certain virus or bacteria, seems to be of little value, for it cannot be general. Consequently, if there be any safety, it must be of short duration.

The theory of mediate or immediate contact of poison to differentiate contagion from infection, is losing favour. That of air-borne germs is also losing ground. Cholera was once thought to be an air-conveyed disease, but recent observations attribute the scourge more to drinking water and food than to any other mode of communication. So with small-pox. The more ventilated a hospital, the greater the chance of recovery from any disease. Our lungs are a natural protection against micro-organisms. The lungs supply no direct channels. Whereas the stomach and intestines have many. The air may be full of poisonous particles, still we do not imbibe them. As a general rule, they act through the stomach by means of food and drink. The bacteria of tuberculosis (consumption) may act on the lungs directly, as it is a disease peculiar to them.

The communicability of plague poison is possible through food or drink. Dr. James speaks of three modes of access: (a) by respiration, (b) inoculation, (c) by food or drink. The easiest way to introduce a poison is through a cut. He says:

It has also been noticed that the site of the bubo seems to be determined by the existence of a scratch or cut of the area from which the affected glands absorb. The Chinese coolies always go barefoot or with grass shoes, and abrasions or cuts are very common on their feet. The vast majority of buboes were in the femoral region. It is possible that these or some of them, got their attack by inoculation.

The cases that he has cited do not establish his point, *viz.*, access through the air. The plague germ might have been introduced through food as well. He took no particular care to ascertain the origin. He laid stress on inhalation of germs without mentioning how or where the food was cooked, and what was the drink.

It is too early, perhaps, to accept the bacillus of Kitasato as the *causa causans* of the disease. He must be confirmed by researches of other bacteriologists in subsequent plagues. Already, information reaches us of diplococci other than those found by Kitasato and Yersin, discovered by Haffkine and Hankin in the Bombay plague.

OUR LONDON LETTER.

October 16.

Great Britain. The tragic death of the Archbishop of Canterbury when on a visit to Mr. Gladstone at Hawarden; the great speech of Lord Rosebery at Edinburgh; the refusal of the French Government to surrender Tynan, the infamous No. 1 of the Phoenix Park murder, have rendered the past week one of great excitement. The circumstances attending the death of the Primate of all England were sufficiently tragical. To-day, in the glorious ranc of Canterbury Cathedral, he is to be buried, the first prelate of the Church of England who has found his final resting-place in that consecrated spot since the Reformation. As an interesting historical fact, it may be noted that the last Archbishop of Canterbury so buried was the celebrated Cardinal Pole, and now the quidnuncs are busy speculating as to who will be the next Primate. It appears to be thought that had Dr. Davidson, the Bishop of Winchester and son-in-law of the late Archbishop Tait, been in a condition of health to accept the heavy responsibility, he would have been the Queen's favourite in the running. He is pre-eminently a favourite with the Queen and the Court, but his state of health is very precarious. After him, Dr. Creighton, the Bishop of Peterborough, is the favourite. You will remember he represented the Church of England at the recent coronation of the Czar, when his dignified bearing and lofty character made him a general favourite. Another solution is that Dr. MacLagan, the Archbishop of York, may be transferred to Canterbury, but this, I think, is extremely doubtful. With many excellent qualifications, he is not just exactly the man to rule the Church of England in these trying times.

Lord Rosebery's speech was a very masterly one and has met with almost universal commendation on the part of the press, excepting the "Chronicle," whose Editor appears to have lost his head over the Armenian question. It is well-known Lord Rosebery as Prime Minister never enjoyed the loyal support of Sir William Harcourt, but, as he said himself, the last straw that determined his resignation of the leadership of the Liberal party was Mr. Gladstone's recent appearance at Liverpool. Speaking of his personal relations as those of affectionate and reverential regard for his old master, duty compelled him to point out that Mr. Gladstone's views on this Armenian agitation are opposed to all ideas of high statesmanship. Lord Rosebery made mince meat of all Mr. Gladstone's suggestions, and plainly said it was impossible for him (Lord Rosebery) to lead the party, while at any moment Mr. Gladstone, without consulting its leaders, should come forward to stimulate the rabid fanaticism of the "Nonconformist conscience."

I am glad to see that Sir Edward Clarke, the future Unionist Attorney-General, when speaking at York last night, had the courage and manliness to use these words: "But there was another matter which was also a matter of amusement. It was really amusing to see that Lord Rosebery, a tried, experienced student and administrator of foreign affairs, had had the *coup de grâce*, as he himself had said, given to his public career as leader of the Liberal party by the man who, of all others, had least claim to the consideration or regard of Englishmen upon any sort of question connected with foreign policy. There was no politician of our time who had been so conspicuous and consistent and disastrous a failure in foreign affairs as Mr. Gladstone ('Hear, hear,' and cheers), and for Mr. Gladstone, whose blunders we were now endeavouring to correct by great effort and great expenditure—for Mr. Gladstone, whose name would always be associated in the memories of our people with the disgraces of Majuba Hill and Khartum (hear, hear)—to be able to dismiss from the leadership of the Liberal party Lord Rosebery upon a question of foreign policy seemed so grotesque that one would have almost thought it an impossibility if it had not actually happened."

That I have not exaggerated the general feeling as to the impolicy of this agitation, could be proved by a mass of evidence. But I restrict myself to a few indications.

Mr. H. C. Richards, the apostle of peace, has been attending the "inter-Parliamentary Conference on Arbitration" recently held at Budapest. From there he writes to the *Times*. After referring to the "advice of irresponsible public speakers," he goes on: "only those who have journeyed through European capitals know the difficulties which environ our Prime Minister, and the criminal folly of endeavouring to force his hand." In the "Daily Mail," I read: "Protests are appearing in the American papers regarding the proposal to ship Armenian refugees to the United States. Several thousand Armenians who are now living in New York have the reputation of being even more sordid, greedy, dirty and unscrupulous than Russian Jews. It is suggested that England would give a proof of the sympathy she professes by offering Armenians asylum." There is something thoroughly practical in the suggestion. Noisy gatherings at St. James's Hall, Exeter Hall and the City Temple only give opportunity for ranting windbags to perorate amidst the applause of excited crowds, the great mass of whom do not know the geo-

graphy and history of Armenia. They form magnificent conduit pipes for the garrulity of Canons Maccoll, Scott Holland and Wilberforce, as also for the claptrap mouthings of such Nonconformists as Rogers, Parker, Hughes and Haston.

But the American suggestion of "settlements" tickles my fancy. Let each of these clerics take into his house half a dozen of the "sordid, greedy, dirty and unscrupulous" refugees. Then the Duke of Westminster, on his magnificent domain of Eaton Hall, could run up shanties for a thousand of them. The G. O. M. might provide for five hundred at Hawarden. The Duke of Argyll for a thousand on the everlasting hills around Mocracy Castle. Your Armenian merchant princes might do the same in Calcutta. They have always been examples of lavish and generous hospitality. The Bar too, through the Advocate-General, might assist the movement. There is a capital joke in the papers about the Sultan. He is going to bring an action for damages against Mr. Gladstone for calling him an "assassin."

That reminds me by the way that a leading French journal, criticising the Hawarden vocabulary, writes: "The Sultan may retaliate by calling Mr. Gladstone 'the great assassin of the Sudan,' as it is due to his blundering and cowardice when Prime Minister in 1884, the Sudan is now a pandemonium of slavery and cruelty."

So you see there is nothing to be gained by calling names, even when the vituperator is of the advanced age of 86, and one whom all would desire to hold in esteem, as a man now retired from the field of party politics.

To show that I have no antagonism to the Nonconformist clergy as such, I may mention that I read with great amusement the following paragraph in an evening paper:

"The Bishop of London does not often preach at a harvest festival, but last night he occupied the pulpit at St. Columba's, Haggerston, and the attendance showed that Haggerston folk appreciated the exceptional favour conferred on them by the Diocesan."

When one reads a paragraph like the above, we suppose we are living in Spain or Italy, where the people are priest-ridden. But the "Westminster Gazette" is the organ of the extreme Gladstonian party, and here we are asked, we laity, to fall down on bended knees and worship Bishop Temple! A man who, if he still adheres to the views expressed in the first of the Essays "Septem ad Christum," has no more right to be the Bishop of a Christian Church than I have, although I quite allow I would be glad to have his town Palace in St. James's square and his Fulham Palace on the banks of the Thames. And then these autocrats of the Episcopal Bench—and no one is more autocratic than the Bishop of London, with all his temperance fads—ask us laity to believe in the Church of England. It is impossible. A distinguished Father of the Roman Church said to me the other day, "There is nothing between Rome and infidelity." With that opinion, I quite sympathize. What are the Bishops of the Church of England? Successful schoolmasters. In the Archbishop of York you have an exception. He was, I believe, an officer in the Indian army, but ecclesiastical promotion was more to his taste, and, though a born Presbyterian and of an average middle class Edinburgh family, he succeeded in an aristocratic marriage, and finds himself, no doubt to his own wonderment, Archbishop of York.

Tynan. It is to be regretted that the French Executive refused to extradite this abominable villain. French procedure is different from ours. Here when the French Government set our law in motion as recently in the case of Arton, the prisoner is brought up before the Senior Magistrate of London, and with the Magistrate rests the decision as to whether the petition for the extradition of the criminal is to be granted. In France, it would appear, the decision rests with the Government of the day as represented by the Minister of Justice. The one point to be said in favour of the French Government is that, under the Code Napoléon, Tynan had a right to claim "prescription." "After the lapse of ten years every criminal according to French law can mock at the most conclusive proofs of his guilt and seeing that the Phoenix Park assassinations were perpetrated in 1882, Tynan is therefore completely covered by prescription." This will doubtless lead to the liberation of the accomplice Bell, who was arrested in Glasgow. Now that our Government have failed to secure the surrender of Kearney, Haines and Tynan, the charge of conspiracy as against Bell cannot be maintained.

Spain and Cuba. The state of affairs regarding Cuba is complicated by the approaching Presidential Election in the United States. Should Mr. McKinley be successful in defeating Mr. Bryan, it is felt Spain will have to abandon Cuba. The Spaniards, it is said, have now 200,000 troops in the island, but are no nearer the suppression of the rebellion. Should Spain have to abandon Cuba, it will lead to a frightful financial catastrophe, as the Cuban debt is to amount to 500,000,000 dollars which would fall wholly on the mother country. Regarding the Presidential Election I need say nothing, as in three weeks' time we

should know the result. In the meantime, we are having daily cable-grams vouching, from figures, that McKinley is certain of election, while the other side produces figures that prove that Bryan will be the next occupant of the White House, and each side flings at the other "the lie circumstantial and the lie direct."

Books. The book of the week is the "Life of John Gibson Lockhart" by Andrew Lang. From the review I enclose if you have space for it in an abridged form, you will see that Mr. Lang has made the best of his implements, but he has been severely handicapped by not having had access to the marvellously interesting personal papers that are supposed to be safe-guarded in the archives of the famous publishing house of John Murray. They must have a wonderful piquancy as they would throw light on the most interesting part of his career when acting as Editor of the "Quarterly Review." Holding an influential position he was brought into daily contact with all that was most distinguished in political and literary life. Mr. Murray has doubtless good and sufficient reasons for declining to let them see the light. But, some day they may be looked for and whoever lives to read them will have matter of extraordinary interest.

Sir Richard Temple's autobiography is out. Of course, I have not yet seen it, but I have read the reviews of it in the "Daily News" and "Daily Chronicle," with amused interest. In the former paper the wielder of the pen beslobbers him with fulsome praise, in the latter, (and from my personal knowledge of Sir R. Temple, as an Indian administrator, I should think by far the true criticism) he is told, with almost insolent bluntness, he might have buried his autobiography in the archives of his ancestral home, The Nash, Worcestershire. I annex the whole criticism:—

"Sir Richard Temple's adventures do not make the blood course swiftly through our veins. You might think that a man who had spent more than thirty years of his life in India, who had governed 115,000,000 of Asiatics, and whose administrative gifts had raised him with almost unprecedented rapidity to the post of Finance Minister of the Indian Empire, would write an autobiography full of interesting matter. Candour compels us to say that there is not a single page of these two volumes which communicates an original idea or vivid impression. Of literary skill Sir Richard has not a particle. Many people of consequence, European and native, flit through his Indian record, but they are like the figures in a sum in addition. The writer owed a great deal to Lord Lawrence, but gives us no inkling of that striking personality. He was in England during the chief events of the Mutiny, but returned in time for the closing episodes, of which we find not a trace. He had an interview with the ex-king of Delhi, and informed the captive that judicial proceedings would be taken against him. The story reads like an official telegram. Sir Richard had an interesting experience at Hyderabad, where he conducted some delicate negotiations with the Nizam's chief adviser, Salar Jung. It was one of those situations in which a British official, dealing with a native prince, has to employ the greatest tact. The Nizam was most suspicious; his Minister was in constant personal danger; and Sir Richard had to use all the wariness of the official adept. We have not the smallest doubt that he played his part with distinguished ability; yet his readers have to put up with this bald narration:—

'The Minister used to send me confidential reports in English—through his English secretary—and my answers, also in English, were so guardedly worded that, if by any chance they fell into the wrong hands, little could be made of them. But the locked dispatch-boxes passing to and fro excited the jealousy of the Nizam, and caused interpellations to be addressed to the Minister. A provoking procedure on the part of his Highness would be in this wise. He would sometimes of an evening hold small and informal receptions in his own apartments. Then he would utter sarcastic remarks regarding his Minister. These winged words would fly from mouth to mouth all over the city, and would damage Salar Jung's influence. For me, one mode of encouraging Salar Jung would have been speaking to him verbally. Knowing this, however, the Nizam forbade him to call on me, to dine with me, to ride with me, to meet me in any way without permission previously obtained. Sooner or later the Minister did, indeed, all these things with me, but the obtaining permission was always troublesome, and sometimes even the asking for it gave offence.'

This is positively the only passage in the whole book which makes any approach to graphic portraiture, and it reads like a dry précis of a formal dispatch. Sir Richard has no eye for the picturesque. He notes a torrent in a mountain pass as if it were engaged in some praiseworthy routine at the bidding of the Indian Government. When he offers rewards to the natives for the slaughter of man-eating tigers, he has 'a qualm of compunction at the inroads made upon the animal kingdom.' When engaged upon a survey, he wishes to make a sketch, and chronicles this exciting incident: 'I found my fingers too benumbed for me to hold my horse's reins, so I was obliged to halt for a while in order that Sir Robert Sandeman might kindly rub my hands and restore their power.' We wonder whether Sir Robert cherished this tremendous reminiscence with equal tenacity. The comments on the

native character are equally brilliant. Sir Richard Temple thinks that Shakespeare would have drawn Iago even better if he had lived in India. There are some sensible remarks about education, to which Sir Richard rendered practical service in Bengal, the vernacular Press, and the extension of administrative duties amongst competent natives; but they are brief and perfunctory, and might have been made by any decently informed tourist. Of any original insight into the social condition of India there is not a suggestion though an official of Sir Richard Temple's experience must have had the best opportunities of observation. We can only assume that the knowledge is there, but cannot grope its way through the thick-set hedge of the author's purely statistical mind."

For my own part, speaking from an intimate acquaintance with the finances of India from the date of the appointment in 1858 of the ever-to-be lamented Mr. James Wilson, down to the present occupant of the Chancellorship of the Indian Exchequer, Sir Richard Temple was without exception the most incompetent man that ever filled the office. But how could it be otherwise? Trained as the Secretary of Sir John Lawrence he never had any practical experience of how to deal with the finances of an empire. At the same time it is difficult to explain how two such distinguished men, with the same training, should have proved themselves such masters of finance, as Sir David Barbour and Sir James Westland. Temple's dealings with the working of the income-tax proved him not only thoroughly incompetent, but, like so many of the old Haileybury civilians, offensively arrogant. In the "Chronicle's" review the writer remarks, "of literary skill Sir Richard has not a particle." In Sir William Hunter's admirable series of "Indian Rulers," Sir Richard Temple compiled the life of the distinguished Mr. Thornton, Lieutenant-Governor of the North-West Provinces. It is unfortunate that the task was assigned to Temple. His work stands out in flagrant contrast to the bulk of the other volumes, and one can only wonder that so accomplished a collaborateur as Sir William Hunter should have allowed it to form one of the series. The explanation, I fancy, is Sir William had not the courage to sit in judgment on his old master. Let us hope the autobiography now published is the last literary performance that Temple will inflict on the reading public. To no man has India done more. I do not suppose any member of the civil service ever left India with a better filled purse, the savings of high and lucrative offices held for nearly 20 years. And if you ask me what he has done for India since the year 1880, the date of his final retirement, truth will compel the answer, absolutely nothing. Without any disguise he has thought of no one but himself, and a Baronetcy and Privy Councillorship have been his reward. But what a contrast to Henry Lawrence, Henry Montgomery, H. M. Durand, Donald McLeod and Charles Aitchison among the dead, and Sir William Muir among the living!

October 23.

Great Britain. The event of the past week has been the great Trafalgar Demonstration on Wednesday, the 21st. On that day, ninety-one years ago, the immortal Nelson crushed the combined fleets of France and Spain, off Trafalgar, which henceforth gave its name to the greatest naval victory this country ever achieved. There was a strong feeling abroad, that our great naval hero was neglected. Government very properly held aloof. It had no wish to exacerbate the national feeling of our neighbours across the Channel, and Lord Salisbury had no desire to emulate the fantasticalities of the German Emperor, who makes himself the scoff and scorn of all Europe by the ostentatious way in which, year after year, he celebrates Sedan. But the popular feeling here was that our national glory, Nelson, was neglected. So the Navy League took on itself the duty of focussing the public sentiment by an elaborate decoration of the Nelson monument, Trafalgar Square. A wreath 300 feet in length, weighing about seven tons, was worked round the monument, and vast crowds paraded all day to see that wonderful show, as well as the magnificent wreaths sent by Canada and other colonies. But the main fruit of such a revival of homage to the greatest naval hero England ever produced, has been to direct attention to the man as distinguished from the admiral. A brilliant writer has drawn the contrast between Nelson and Wellington. The former all heart, glorying in his officers and men, sacrificing himself in every way to further their careers, whether at sea or on land. The latter, cold and repellent, looking on his soldiers as so many nine pins, to be shot down by the enemy without one qualm of pity. Neither Nelson nor Wellington was a statesman. The former never aspired to the character, his golden motto being "Duty and Country." The latter, bad for his fame, aspired to be a statesman. And the record is one of dismal failure. But for his singularly maladroit speech in the House of Lords, the Reform Bill of 1832 would never have appeared in the revolutionary character it did. The same writer contrasts Nelson with Napoleon the Great. But beyond a hearty sympathy with the men under their command, and the grand quality in a great commander of drawing out the devotion, nay, almost the love of subordinates, the parallel does not go. Napoleon, as Victor Hugo says of him, is the greatest

historical name in Europe. To that proud pre-eminence Nelson laid no claim. But the demonstration of the 21st had more in it than any mere idol worship of an illustrious name. It typifies the spirit of the time. If Nelson gave us at Trafalgar the command of the seas, we are determined to hold it. In the absence of conscription, we make no pretence to any comparison with any of the great Powers of Europe, but the sea we claim as our own, and intend to hold it, cost us what it may.

Armenian agitation. I hope this is the last time I shall have to refer to it, as we are promised the St. James's Hall demonstration of the 19th is the final outburst of frenzied Gladstonian worship. For, in spite of all declaimers, it was really nothing more. The chairman, Dr. Talbot, Bishop of Rochester, if not through the Lyttleton connection a relative, is a close personal friend of Mr. Gladstone. We were assured the meeting was non-political. In the sense that John Burns and his confrere Price Hughes were not in it, it was so. But Sir—Phillimore took the opportunity of making a brutal attack on Lord Beaconsfield, and he is one of Mr. Gladstone's most pronounced devotees, not to say obsequious flunkies. Did Dr. Talbot call him to order? Not at all. It was left to some indignant members of the audience to cry out "no politics," which covered the pusillanimous Baronet, and made him call a halt. Then Dr. Percival, Bishop of Hereford, the only Radical on the Episcopal Bench, was very much in evidence. He ranted and canted in a way that would do credit to a Methodist parson. The Gladstonian journals are loud in their praise of what they call the "pathos" with which the Bishop brought his son to the front. It seems he is in the army, and the Bishop, in true melodramatic style, spoke of his willingness to follow the example of old Abraham, and sacrifice this son's life, if need be, in driving the Sultan out of Europe. As if he alone was in a position to sacrifice the son's life. What countless fathers and mothers of the middle classes are prepared, as a mere matter of duty, to do the same! But a Radical Bishop's pathetic reference to his boy has driven Gladstonian journalists perfectly wild. The inevitable Dr. Clifford was there, and we are told he weighs well his words. This of the man who denounced the Government Education Bill as "infamous and damnable." The climax of absurdity was reached when the name of Lord Salisbury was received with cheers, while that of Lord Rosebery was hissed. As Lord Rosebery said at Colchester, it was a matter of supreme indifference to him whether the mob cheered or hissed him. But it said little for the intelligence of the audience to differentiate between Lord Salisbury and him, seeing they are both pursuing the same policy. The explanation is to be found in the letter of Mr. Gladstone read to the meeting. Without any name being mentioned, it was a veiled attack on Lord Rosebery. Lord Rosebery has committed the unpardonable sin of daring to differ with the Lord of Hawarden. And so, he, who forty years ago, was not ashamed to attack anonymously, in the "Quarterly Review," the chief under whom he was serving as Chancellor of the Exchequer, is not ashamed, in his old age, to attack with vehemence the man but for whom he would never have been the member for Midlothian. This, however, quite satisfies the "Nonconformist conscience"!

Mr. Leonard Courtney has joined in the fray and no one suffers from his indiscretion but himself. Mr. Courtney's letter appeared in the "Times" of the 19th instant in all the glory of leaded type. The gist of it is, Lord Beaconsfield, Lord Salisbury, Lord Rosebery, Mr. Gladstone are no statesmen. The only heaven-born statesman now in England, is Mr. Leonard Courtney, and if his arrogant assumption is correct, all one can say is, Save us from heaven-born statesmen! The letter is an extremely silly one, worthy of Sir H. Howorth. Mr. Courtney's panacea for all our Eastern difficulties is the abandonment of Cyprus and Egypt. In the former case we are to find a foreign Prince—after the example of Greece—and guarantee him a civil list. As to Egypt, the "Times" remarks:

"If renunciation is to be a preliminary condition of trust, why should this country be the only one called upon, in this sanctimonious style, to buy confidence by surrenders? The position of France in Tunis has a considerable similarity to that of England in Egypt. Moreover, if Mr. Courtney is right, the Austrians must be called upon to give up Bosnia and Herzegovina, the Germans Alsace and Lorraine, the French Savoy and Nice, the Russians all that they have obtained in Europe and Asia during the past twenty years, and to make them over, 'as a guarantee of good faith,' to some sensible form of independent government. The demand for 'princes,' if this policy were to prevail, would become exceedingly keen, and the supply of 'civil lists' on the generous system contemplated by Mr. Courtney would tax the resources of the Chancellor of the Exchequer and of the Finance Ministers of other States. But these considerations will hardly trouble Mr. Courtney, who looks upon England as 'humiliated' because her statesmen admit that she is incapable of facing all the Powers of Europe in war."

Again: "Mr. Courtney's abilities are great and his good intentions are undeniable, yet he seems frequently to have a knack

of putting his case so as to alienate the natural and healthy sympathies of his countrymen". All which goes to prove a man may be a Cambridge second wrangler, and first Smith's prizeman, and sit in the House of Commons for twenty years, without having been able to master the primary elements of practical statesmanship.

I have left myself no time to write to-day on the excitement produced in Scotland by the leader of the revolutionary party in the Free Church, throwing over the "shorter catechism." Your countrymen cannot understand all that is implied in the above statement. But to the dead Chalmers, Cunningham, Candlish, Duff and Guthrie, if they know in their present hallowed state what is going on in our humble planetary system, it must seem the beginning of the end. And now that we have it on high authority that Cardinal Manning was at heart an atheist, like his distinguished brother in Paris who was murdered under the Commune, the question will soon come home, what do these marvellously clever fellows in the Free Church of Scotland really believe? Marcus Dodds, Bruce, Gas Smith, Lindsay and others, do they know themselves what their belief really is? Or, knowing it, will they make it public? Canny Scots as they are, with a splendid income of £500 a year for four months' work, they will wisely for themselves maintain an attitude of reticence. Looking at the Established Church of Scotland, what sympathy can there be between alphabetical Boyd and Professor Charteris? Or, between Dr. Marshall Lang and Dr. Rankine. None whatever. I am not a betting man, were I, I would lay heavy odds, twenty years hence no intelligent lay man will contribute a penny to the support of the clergy, while the Churches by law established, in England and Scotland, will be made over to the old women of both sexes.

STRONG ENGLISH WORDS.

WHEN a person says "I suffered excruciating pain," he expresses a fact in the strongest words afforded by the English language. The word "excruciating" comes from *crux*, a cross, and signifies an intensity of agony comparable only to that endured by one who undergoes the barbarous punishment of crucifixion. There are some diseases which, for a time, cause pain of this acute and formidable nature. To find a relief for it, when possible, is at once the impulse of humanity and the studious desire of science. Two brief examples may indicate what success is attending the effort to both comfort and cure cases of this kind.

"Nearly all my life," writes an intelligent woman, "I have borne the burden of what appeared to be incurable illness. I always felt heavy, weary, and tired. My appetite was poor, and after eating I had a *cruel pain* at my chest and between the shoulders. Frequently the pain was so intense that I was impelled to loose my clothing and walk about the room. My nerves were disordered and irritable, and I was, consequently, easily disquieted and upset. My sleep was habitually bad, and I seemed none the better for spending a night in bed. Eating but little—my strength waned of necessity, and I came to be very weak. For a long time I got about feebly and with difficulty."

"In August, 1887, I had an attack of rheumatic gout, which gave me the most harrowing experience of my life. The complaint took its usual course and refused to yield to the ordinary treatment. Through the partial failure of the liver and kidneys dropsy set in and my legs and feet became puffed and swollen. I suffered *excruciating pain* and was confined to my bed for *thirteen weeks*. Remedies of every description were tried but to little purpose."

"My brother, visiting me one day, said he had been cured of an attack of dropsy by a medicine called Mother Seigel's Syrup. I got a bottle from Mr. H. W. H. the chemist, in Seven Sisters' Road, and after taking it felt a trifle easier. I continued taking it, and soon the pain and swelling abated. I could eat without pain or inconvenience, and by a few weeks' further use of the Syrup I was not only free from any local ailment, but felt better than I ever did in my life before. Since then I have enjoyed continuous good health, taking a dose of Mother Seigel's Syrup occasionally for some transient indisposition. You are at liberty to publish my letter. (Signed) (Mrs.) Elizabeth Rogers, 42, Plevna Road, South Tottenham, London, September 13th, 1895."

"In January, 1892," writes another, "I had an attack of influenza, and was confined to my bed for *eighteen weeks* thereafter. Subsequently I was very weak, and could get up no strength. What little food I forced down (having no appetite) gave me *excruciating pain*, so that I was afraid to eat. I came to be exceedingly weak and had frequent attacks of dizziness. I was worn almost to a skeleton, and none thought I would recover."

"In June, 1892, Mr. Smith, a friend of ours, recommended me to try Mother Seigel's Syrup, which I at once procured of Mr. George Coomb, the chemist in Hucknall. After taking it for only one week I felt greatly benefited. I could eat better, and food agreed with me. Continuing with the Syrup I grew stronger and stronger, and soon felt even better than before I was attacked by the influenza. You are free to print this statement if you wish to do so. (Signed) (Mrs.) Ruth Halliday, 44, High Street, Hucknall Torkard, Nottingham, March 19th, 1895."

Intense pain may or may not indicate urgent danger to life, but it is hard to bear, and very exhausting just the same. In cases of rheumatic gout (Mrs. Rogers) the pain is caused by a poisonous acid in the tissues, originally produced by the decomposition of food in the stomach—indigestion or dyspepsia. The same poison acting on the liver and kidneys creates the other symptoms mentioned. In the case of Mrs. Halliday the ailment was dyspepsia, which in the first place invited influenza, and then remained to torment her.

It is best and easiest to *prevent* pain by using Mother Seigel's Syrup *immediately* when the slightest illness appears.

Sir George Chesney Memorial Committee.**CHAIRMAN :****General Sir Henry W. Norman.****MEMBERS :**

The Marquess of Lansdowne, Field Marshal Lord Roberts, Mr. George Allen, Colonel Sir J. Ardagh, Sir Stuart Bayley, Mr. William Blackwood, Sir Edward Braddon, Rev. A. G. Butler, Colonel Sir G. S. Clarke, General Sir E. Colles, Sir Auckland Colvin, Sir Julian Danvers, General C. H. Dickens, Sir Mortimer Durand, General Sir W. Stirling Hamilton, Captain Hext, R. N., Mr. A. P. Howell, Sir W. W. Hunter, Lieut.-Genl. McLeod Innes, General Sir Allen Johnson, Sir H. S. King, M. P., Mr. A. Lawrence, General Sir R. Low, Sir Alfred Lyall, General Sir O. Newmarch, Sir Andrew Scoble, Field Marshal Sir Lintorn Simmons, Field Marshal Sir Donald Stewart, General R. Strachey, General Sir A. Taylor, Mr. Meredith Townsend, Mr. W. C. Unwin, General Sir George White and General Sir E. Williams.

Memorial**TO THE LATE****SIR GEORGE CHESNEY, K.C.B., R.E., M.P.**

A Meeting was held, on the 24th April, at the Royal United Service Institution, of some of the friends of the late Sir George Chesney, to consider the question of the commemoration of his distinguished services as Soldier, Administrator, Statesman, and Author. General Sir Henry Norman presided, and was supported by Field Marshals Sir Lintorn Simmons and Sir Donald Stewart, and other friends of Sir George Chesney. To carry out the object of the Meeting, a General Committee was formed, which included the gentlemen then present, and in addition, the Marquess of Lansdowne, Field Marshal Lord Roberts, General Sir George White, Sir Andrew Scoble, Sir Alfred Lyall, Sir H. S. King, Sir W. W. Hunter, Mr. Meredith Townsend, General Richard Strachey, Mr. William Blackwood, and others.

The form the Memorial should take was left for the future consideration of the Committee, as it would depend on the amount subscribed, but the suggestions tended towards a bust of Sir George for the India Office, and a medal for valuable contributions to Military Literature. It was resolved to limit each subscription to a maximum of three guineas.

Subscriptions will be received by Lieutenant-General McLeod Innes, 9, Lexham Gardens, Cromwell Road, London, W.

COMMITTEE FOR INDIA :

His Excy. General Sir George White, V. C., G. C. I. E., K. C. B., the Hon'ble Major-General Sir E. Colles, K. C. I. E., Lieutenant-General Sir W. S. A. Lockhart, K. C. B., K. C. S. I., His Excy. Lieutenant-General Sir C. Mansfield Clarke, K. C. B., Major-General J. Duncan, Major-General G. E. L. S. Sanford, C. B., C. S. I., Major-General G. de C. Morton, C. B., Major-General A. R. POSTSCRIPT.

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Uckoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Binghamton Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, M.C.I.E., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindoo Patriot*, in its palmiest days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, potent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Hapital Railway, from Ceylon says:—It keeps splendid time and never stopped although it sustained hard knocks and jerks. x Dr. H. Moore of Royal Artillery from Poonamallee says:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dumdum says:—I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—The watch you sent me some seven years ago is still keeping very good time.

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Rs. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Rs. 1-8-0. Mr. G. Smith, Salt Inspector from Sanikulia, says: "A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding. Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Porandhar says:—For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28 x Pte. H. C. Bishop of L. F. L. Regt. from Kamptee says:—A Corporal offered Rs. 30 for the very same watch. Gentlemen's open faced, keyless *real solid gold watch* Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

Balaknana, Calcutta.

KAVIRAJ NAGENDRA NATH SEN, Physician, Surgeon, Accoucheur, practises the Ayurvedic system of medicine, after having obtained a diploma at the final examination of one of the Government medical Institutions of the country.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A. HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada.
Scientific American.

VOL. XV.

CALCUTTA, SATURDAY, NOVEMBER 21, 1896.

WHOLE NO. 750.

ROSY'S STORY.

A DONEGAL BALLAD.

WITH the lark up above, the Lent lilies below,
Young Owen came courtin'—I could not say "No!"
But because I was poor and of humble degree,
His proud parents parted my Owen and me.

Had he only stood firm I'd have waited for years;
But Owen gave way, so I forced back my tears,
And wed Hugh O'Donnell, long hopeless of me,
For I had a spirit above my degree.

Yet the songs we so loved, evermore, evermore,
Owen whistled and sung as he went by our door;
But not once I looked out my old sweetheart to see,
For I had a spirit above my degree.

For comfort, for comfort I cried and I prayed,
Even when my first babe in my bosom was laid;
But when in my face he laughed up from my knee,
Sweet comfort, sweet comfort it came back to me.

Then Owen he matched with an heiress at last;
But only on folly her thoughts they were cast,
Till her carryings-on so disgraced their degree,
Owen's parents repented their treatment of me.

Till one day to a knock as I pushed back the pin,
All dressed in his best my poor Owen ran in;
And "Rosy, make haste, dear, make haste, dear," cried he,
"For the chapel's full up our fine weddin' to see."

I looked in his eyes, and I saw they were wild—
With the old sweet croonings his mood I beguiled,
Till his heart-broken father came over the lea
With the keepers and took him, still crying for me.

Now my good man is gone, but God has been kind,
My sons they are steady, my girls to my mind;
My prayers for my lost ones rise fervent and free,
And between their two graves there's one waiting for me.

ALFRED PERCEVAL GRAVES.

—The Athenæum.

WEEKLYANA.

ACCORDING to the *Turkestan Gazette*, M. Sven Hedin, the Swedish traveller, has discovered, to the East of the Yarkand Tarim, at 40½ deg. of latitude, a group of lakes.

INDIA pays an annual subsidy of £1,000 to the Indian Section of the Imperial Institute. A request for a supplementary grant of £800 has not been complied with, on the ground that India "has so far

derived no advantages from its connection with the Imperial Institute that are in any way commensurate with what the Institute has received and is receiving from India." Evidently, the Secretary of State for India was not for it, or else the Government of India could not exercise its own discretion, and refuse the grant. The Government of India is not so free as this incident may shew. Its independence is at its lowest ebb. The direct management of the English Sovereign and the telegraph have played havoc with that power and the Viceroy is reduced to carrying out orders from home. He is no better than the Agent of an Indian Taluqdar, perhaps worse.

THE *Imperial and Asiatic Quarterly Review* for October summarizes the objections of the natives of India to the Arms Act in these words: "The National Congress leaders complain of the operation of the Arms Act, their argument being that the population is loyal and law-abiding and that it is a hardship on the people who cannot protect themselves against wild animals." Is that the whole reason? It is a wild legislation and is no evidence of wise statesmanship and confidence in the people. This and the Vernacular Press Gaggling Act were passed simultaneously as a very emergent measure on the eve of Lord Lytton's Afghan war, against the Amir not his country. The retirement of Lord Lytton saw the end of the other law, but the Arms Act still disfigures the Indian Statute book. Lord Ripon, without repealing it as was expected, had allowed a liberal working of the Act. It is, however, being stringently enforced since his return to England. The operation of the law, aided by the Courts, has been so absurd that it is time that, if not repealed, it should be reconstructed.

IN noticing Dr. Jogender Nath Bhattacharya's "Hindu Castes and Sects," the *Home News* remarks:

"To those who are interested in the history and philosophy of religions, and especially to those who are making a study of the religious customs of the East, this work will prove both welcome and useful; not, perhaps, for its own sake alone, but also for its suggestiveness. It is the development of the chapter on the Hindu Caste System in the same author's 'Commentaries on Hindu Law.' It is very learned; and, to the English reader unacquainted with the literature of the subject, will prove somewhat involved. The section devoted to caste contains what is to all intents and purposes a defence of the system, the origin of which is traced to Brahmanical legislation. Caste, rightly considered, is, we have been told by Risley, whose verdict is endorsed by Mr. Bhattacharya, a matter mainly relating to marriage. There is no ground whatever, we are assured, for the statement that caste is the outcome of the policy embodied in the Machiavellian maxim, 'Divide and Rule.'"

In the second section of his book Mr. Bhattacharya says many things about various Hindu sects which their adherents will scarcely peruse with much pleasure. Nothing can, in his opinion, be more sinful than to speak respectfully of persons who are enemies of mankind, and to whitewash rotten institutions by esoteric explanations and fine phrases. Here our author has especially in view the worshippers of Siva, the Sakta (or devotees of energy), and the disciples of Radha. At the same time, he has evidently done his best to render reverence where reverence is due. We shall look forward to the publication of Mr. Bhattacharya's work on the 'Philosophy of Religion,' with great expectations. If it fulfils the promise of the volume now before us—the value of which is much enhanced by its admirably arranged index and glossary—it should command the serious and thoughtful attention of scholars and thinkers in both hemispheres."

THE following is from the *American Sentinel*:

"A new crusade is being preached against the Turk. We have no

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

'Peter the Hermit' in these days, but we have men who come not far behind that old-time leader in zeal and fiery eloquence against Islam. These men have left nothing undone to move the nations of Christendom to invade the Turk's domain, and either exterminate him or drive him 'bag and baggage' away from the confines of civilization.

As with those anti-Islam crusades of which history speaks, the animus of the movement is religious more than secular. It has its strongest advocates among the leaders in religious enterprise. It is urged upon religious grounds. It is said that the Turkish Mahomedans are slaughtering the Armenian Christians. Therefore let Christendom arise and, sword in hand, put a sudden and effectual stop to Islam's red-handed propaganda.

We referred not long since to the inflammatory speech of Evangelist B. Fay Mills along this line before a large Christian audience at Washington. That meeting and that speech constituted one of the most noteworthy features of the convention, and attracted widespread attention. While it evoked some criticism as an arraignment of the United States Government, it was in harmony with the general tone of newspaper comment, both secular and religious, upon the Armenian situation. The general sentiment evidently is that the 'Christian nations,' our own included, ought to muster their armies and navies upon the shores of the Levant and put down the Turk with a strong hand. The great obstacle that stands in the way of this is the (in the language of Evangelist Mills) 'unpatriotic, uncivil, undemocratic, un-republican, un-American, un-Christian, selfish, weak, wicked, barbaric and criminal' policy by which these 'Christian nations' are controlled.

The alleged Turkish massacres in Bulgaria a few years since, which led to the last Russo-Turkish war, drew forth the same sentiment from 'Christian' sources. At that time the late Bishop A. Cleveland Cox gave utterance to this sentiment in the following lines :—

Trump of the Lord ! I hear it blow !
Forward, the Cross ; the world shall know
Jehovah's arm's against the foe ;
Down shall the cursed Crescent go !
To arms ! To arms !
God wills it so.

God help the Russ ! God help the Czar !
Shame on the swords that trade can mar !
Shame on the laggards, faint and far,
That rise not to the Holy War !
To arms ! To arms !
The Cross our star !

How long, O Lord ! for Thou art just ;
Vengeance is Thine ; in Thee we trust ;
Wake ! arm of God ! and dash to dust
Those hordes of rapine and of lust.
To arms ! To arms !
Wake, swords shall rust !

Forward, the Cross ! Break, clouds of ire !
Break with the thunder and the fire !
To new crusades let faith inspire ;
Down with the Crescent to the mire !
To arms ! To arms !
To vengeance dire !

To high Stamboul that Cross restore,
Glitter its glories as of yore.
Down with the Turk ! From Europe's shore
Drive back the Paynim, drunk with gore
To arms ! To arms !
To arms once more !"

The New York journal then asks the question, "Where did the Turk first get this fierce and inextinguishable hatred of the 'Christians'?" and replies :—

"Was it not very largely the result of those first crusades which, in the eleventh and twelfth centuries, carried fire and sword into the midst of the Turkish domain, spreading death and ruin in their track, and wresting from the Turk for a time an important portion of his territory? Certainly the character and result of those undertakings were well calculated to kindle an undying hatred of their perpetrators in the Moslem breast. Consider the following pen picture of the historian relative to the Crusaders' storming of Jerusalem :—

'The Saracens gave way before them. They retreated through the streets, fighting at intervals, until they were driven into the precincts of the Mosque of Omar. Blood flowed in the gutters, and horrid heaps of the dead lay piled at every corner. None were spared by the frenzied Christians, who saw in the gore of the infidels the white way of redemption. Ten thousand dead scattered through the city gave token of the merciless spirit of the men of the West. Another ten thousand were heaped in the reeking courts of the great Mosque on Mount Moriah. "God wills it," said the pilgrims.

The indiscriminate butchery of the Saracens was carried out by the rank and file of the Crusading army. In this bloody work they needed no incentive—no commander. Each sword flamed with hatred until it was cooled in the dripping life-blood of the enemies of Christ.

"The spirit of the massacre," the historian adds, "is well illustrated in the letter which the Christian princes sent to his Holiness the Pope." The devout writers say : "If you wish to know what we did to the enemies we found in the city, learn that in the porfice of Solomon and in the temple our horses walked up to their knees in the impure blood of the Saracens."

It continues :—

"The instructions given by Abu Bekr, the successor of Mahomed, to his military commander, and which, says the historian, 'may well be repeated as illustrative of the spirit of young Islam going forth to conquest,' ran thus :—

"Treat your soldiers with kindness and consideration. Be just in all your dealings with them, and consult their feelings and opinions. Fight valiantly and never turn your back upon a foe. When victorious, harm not the aged and protect women and children. Destroy not the palm tree or fruit trees of any kind ; waste not the corn field with fire ; nor kill any cattle excepting for food. Stand faithfully to every covenant and promise ; respect all religious persons who live in hermitages or convents and spare their edifices. But should you meet with a class of unbelievers of different kind, who go about with shaven crowns and belong to the synagogue of Satan, be sure you cleave their skulls unless they embrace the true faith or render tribute."

The victorious Moslems overran northern Africa, conquered Spain and pushed on toward the interior of Europe, to meet the resistless 'hammer' of Charles Martel at Tours. The advancing wave of Mahomedanism was rolled back across the Pyrenees and finally out of Spain and back into Africa. But a deep-seated resentment against the Moslems remained throughout 'Christian' Europe ; and it was a feeling of revenge against the Turk, more than any other motive, which actuated the 'Christians' in their crusades for the recovery of the 'holy sepulchre.' These crusades have been the battles of contending rival religions, and it was that fierceness which religious animosity always lends to carnal strife that gave the contest its vindictive character and left in the breast of the Turk that hatred of what he deems Christianity which he has manifested in so sanguine a manner since that time."

It concludes :—

"During all this time, and for centuries afterwards, true Christians were suffering a hundred-fold more at the hands of the 'Christian' rulers of Europe, led by the Papacy, than at the hands of the Turks. Then was the time when the true church—the 'woman'—had 'fled into the wilderness' to escape the persecution of the Papal dragon (Rev. xii. 4-6, 14), there to be nourished by God for the space of twelve hundred and sixty years, until the Papal power should be broken. The true Christians were persecuted in Europe, but not in the domains of Islam. There it was that some of them found a refuge from the rage which burned against them in 'Christian' lands. But for the wickedly-false conception of Christianity which the crusades gave to Islam, there is no evidence that true Christians would ever have suffered from Turkish wrath. There is no evidence that true Christianity would be suffering in Armenia to-day but for the wicked work of those who were Christians only in name.

What, then, do we want to-day? A new crusade, which will again bear the sword against the Turk in the name of Christ? A new wickedness to right the consequences of the old? Verily, no. Christianity cannot bear the sword. We make no attempt to define duty for the civil Powers. But we would record our most emphatic protest against a repetition, in the name of the 'Prince of Peace,' of that most 'un-Christian, selfish, wicked, barbaric and criminal' folly which gave the lie to Christianity before all the world and perpetrated the colossal sin of the ages in the so-called 'Christian' Crusades."

THE High Court resumed work, after the Long Vacation, on Thursday. The closing of the Court saw the retirement of Sir Comer Petheram. With the re-opening, Sir Francis Maclean is the Chief Justice.

The new Chief Justice, with Justices Macpherson and Trevelyan, is engaged in hearing appeals from the Original Side. Before the business of the day commenced, the Advocate-General, surrounded by a large number of barristers, pleaders and attorneys, addressed the Chief Justice regretting the death of Mr. Manomohan Ghose, the well-known Bengali criminal lawyer. Sir Charles Paul's words were :

"I desire merely to mention the fact that lately we have lost one of our most intelligent, most distinguished and leading members of the Bar, Mr. Manomohan Ghose, and I wish to express my regret at the misfortune of having lost so public-spirited an individual and so affable and courteous a gentleman, who in taking part in Indian politics, did so in a modified and very gentlemanly way. We desire to express our deep regret at his death, which took place a few days ago."

The Chief Justice replied :

"Of course, Mr. Advocate-General, I have not had the advantage of personally knowing the distinguished gentleman whom you mention, but I may say this, that I have heard from my brother Judges of the high position and great esteem in which he was held, not only by the members of the Bar, but I believe by every one whom he came in contact with. I feel that under the circumstances, having no personal knowledge of him myself, it would be quite out of place for me personally to say more."

•••

MR. Brojendra Coomarr Seal has been confirmed as District and Sessions Judge of Birbhum, and Mr. Umesh Chunder Batavyal as Magistrate and Collector, Bugra.

•••

MR. A. Pedler has been made permanent Principal of the Presidency College. He will also act as Inspector of Schools, Rajshahi and

Burdwan Circle, while Dr. C. A. Martin officiates as Director of Public Instruction, Bengal.

NOTES & LEADERETTES, OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH
OCCASIONAL COMMENTS.

THE dynamiter Bell has been committed to take his trial. The police agent Jones has testified that he wormed himself into a secret Irish Revolutionary Society in New York, with which Tynan and Bell were connected.

THE Austrian lately arrested at Suakim in Dervish disguise, and seeking to penetrate the Soudan, turns out to be one Inger, who was possessed of passports and elaborate Dervish drill-books, and also papers showing him to be connected with several French journals.

LORD LANSDOWNE, speaking at the Colston banquet at Bristol, protested against the apathy of the public in military matters, and urged the need of a thoroughly efficient army.

It is officially stated in Italy that peace with Abyssinia was signed on the 26th October, as also a convention to release the Italian prisoners. Italy recognises the absolute independence of Ethiopia. The delimitation of frontiers is postponed for a year. King Menelik has wired to King Humbert that he hopes henceforth they will always be friends.

THE first portion of the Niger Company's expedition sailed from Liverpool on November 15. Captain Arnold commands the expedition, which will consist of 700 men. Plenty of fighting is expected—and barbarity too.

The mystery attaching to the object of the expedition is irritating the French.

MR. CURZON, replying to a deputation of the Society of Friends, repeated his promise for the abolition of the legal status of slavery at Zanzibar and Pemba, but said it must not be too abrupt for fear of economic and political troubles.

ALTHOUGH America has virtually concluded with Great Britain an agreement on behalf of Venezuela, the latter has still to conclude a treaty with Great Britain on the same lines as the Anglo-American agreement.

In the Reichstag, on November 16, Prince Hohenlohe made a speech in which he said he was still bound to secrecy, and could not therefore discuss Prince Bismarck's revelations regarding the secret treaty with Russia. The assertion, however, that British influences, either then or now, were operative was without any foundation. The distrust at first provoked among the Powers forming the Triple Alliance by the revelations had been completely dispelled. Germany's relations with Russia had never ceased to be good and friendly.

Baron Marschall Von Bieberstein, Foreign Minister, also spoke, and, while eulogising Prince Bismarck, strongly defended the policy of the Government since 1890. No treaty, he said, was required to maintain friendship between Russia and Germany, and no wish of the Government was aimed at the sundering of Russia and France. Germany adhered to the Triple Alliance, and her relations with other Powers were based upon respecting their rights as they respected those of Germany.

A DEBATE took place in the Reichstag on the subject of duelling in the German Army. Prince Hohenlohe promised to take measures to restrict the practice to the utmost. The Minister for War, amidst the protests of the Deputies, defending it, said the honour of officers demanded the right of self-defence, and especially against the insults of civilians.

THE Powers are now discussing means of helping Turkey financially to enable her to introduce reforms, but Great Britain first desires the Powers to agree to measures to secure good government.

THE *Metropolitan* of Moscow and the principal Russian papers have opened Indian famine funds. Wheat is rising largely in the south of Russia and also freights. It is announced that agents from Bombay are coming to conclude contracts.

THE *Times* Singapore Correspondent states that Li Hung Chang is retiring disgusted with the treatment experienced since his return.

THE friendly tribes southward of Dongola are being organized to patrol the roads, guard the wells, and signal the movements of the Dervishes.

THE *Novoe Vremya* urges the settlement of the Eastern question through an *entente* between Turkey and Russia. The latter Power must use its authority in the East to secure supremacy and maintain peace. Russia adheres resolutely to the treaty clauses of the Black Sea, preventing the egress of Russian warships but equally preventing the ingress of foreign warships, thereby protecting the Russian fleet.

THE Bombay Government have, in reply to the enquiry of the Bombay Presidency Association, informed the President of the society that "the reasonable expenses of the witness to be nominated by the Bombay Presidency Association for the purpose of giving evidence before the Royal Commission on the Administration of the Expenditure in India will be paid either by the Government of India or by orders of the Royal Commission. The expenses of his passage to England will be advanced to him under the orders of this Government, and he will get further instructions at the India Office."

THE Council of the Bombay Presidency Association has formed a Committee to raise subscriptions in aid of famine relief. This fund will be independent of any others for the same purpose. Among the steps taken to relieve distress, is the formation of a company for importation of food grain from foreign ports. The capital is Rs. 1,500,000 divided into 15,000 shares of Rs. 100 each. The prospectus says: "The main effort must be in the direction of providing a sufficient supply of food grain at rates which, though high, may not be abnormal. It is expected that by buying in all desirable quarters, and importing suitable descriptions of food grains in sufficient quantities, the Company will be able to make the effects of its operations feel in the grain markets of the Presidency and counteract the forces now at work, and which tend to put up prices abnormally." It goes on: "A high commercial profit is not the object of this Company which is started more from motives of philanthropy than with a view to the possession of gain." Orders have already been given for 4,000 tons of maize from America, 500 tons of barley, and 500 tons of wheat. The Company is styled the Grain Trading Company of Bombay, and is intended to last no more than 2 years. At least, such is the open declaration.

We take the formation of the Company as a practical protest against the refusal of Government to enter the market—to interfere, in the language of the Lieutenant-Governor of the Punjab, with the movements of grain through the country or to fix prices authoritatively.

The Lieutenant-Governor has, at a meeting held at Delhi to discuss measures for relief of the impending distress in or near Delhi, explained:—"We take the course we do simply because we think it is absolutely clear that if we were to attempt to prevent the export of grain or to fix prices, though it might afford passing relief for a few weeks, it would in the long run immensely aggravate the difficulties of the position." This policy was laid down by Lord Northbrook. Sir Dennis Fitzpatrick gave an instance to prove what he said. "The other day a Magistrate of a district in another Province prohibited the exportation of grain from a certain large town, and laid down certain prices at which he ordered grain dealers to sell, and what followed was this. Large stocks of grain that were on their way to that town by railway were at once turned back, and even grain that was at the railway station awaiting delivery to the importer was re-booked out of the place to some distance." He had also a word for the grain

dealers. "There is one thing, however, that has been much dwelt on, and which I thoroughly agree is matter for very deep regret, and that is that grain dealers, by indulging in their propensity for gambling, are in some places running up prices of corn to a point beyond that which the circumstances of the case would naturally call for." But grain dealers can be generous. It is reported that the Lahore Relief Fund Committee which have collected Rs. 25,000 will hand over all available cash to a local *bunnis* who has agreed to import grain to the value of the advance made without profit to himself. At a meeting in the People's Hall, Secunderabad, a number of grain merchants made a solemn pledge to sell grain at cost price to the poor during the famine and not to sell large quantities to wholesale merchants.

THE latest weather report dated Simla, November 20, is:—

"The barometer has fallen almost everywhere. The cyclonic storm which has been traced northward up the Arabian Sea and which proves to be a very small disturbance, is apparently approaching the coast near Surat, where pressure is largely below the normal. Winds exhibit cyclonic indraught towards the storm, and gales have been experienced in Kathiawar. Light rainfall has occurred at North Bombay Coast stations and heavier rainfall in Bombay and the Deccan, where Sholapur reports five inches of rain, and Poona, Bijapur and Ahmednagar about one inch. Weather remains, and is likely to continue unsettled in Madras, where Tinnevely reports two and three-quarters inches of rain, and Nellore, Cuddalore and Wellington over one inch. The weather is cloudy except in Burma, Assam, and Bengal, and rain appears likely to extend to the central parts of India. The mean temperature is excessive except in North-East India."

The weekly report on the state of the season and prospects of the crops for Bengal, for the week ending 16th November, is as follows:—

"There was some rain in Northern Bengal and in parts of Orissa, and also in the Brahmanbaria sub-division of Tippera. It is said to have been insufficient to benefit the rice crop, and prospects remain generally unaltered. In Ringpur and Bogra the rain was accompanied by hail which did some damage to the crops, but in these two districts the prospects of the winter rice crop are reported to be fair. In Saran locusts have done considerable damage. The spring crops are reported to be germinating well in Northern Bengal and in Patna, Gaya and Saran; elsewhere the prospects of these crops are unfavourable. Prices continue very high, but, except in Patna and Champaran, there has been no material rise since last week. In Patna, Champaran and the Bhabua sub-division of Shahabad test works have been opened, but in Patna they have not been largely attended. In Champaran and Shahabad the numbers employed on the 14th were:—Champaran—men 705, women 444, and children 268; Shahabad—men 387, women 305, and children 138."

The number of the relieved in the Madras Presidency was 9,740; in the Bombay, 1,400; in the N-W. Provinces and Oudh, 99,008; in the Punjab, 7,139; Burma, 8,519; Central India, 4,116; Rajputana, 8,206. These numbers are the aggregate of those on relief works and on gratuitous relief.

Last week, 1,80,974 maunds of rice and 2,07,825 maunds of other food grains were exported from Calcutta to foreign and Indian ports.

WE have now in our midst a homœopathic doctor from the West, a recent arrival—Dr. M. L. Jelovitz, with experience of plague. He is perhaps the only doctor in Calcutta who can speak from personal knowledge of a disease to which a medical board has been specially appointed. It is to be hoped that the Board or the Government will utilize him. His being a homœopath need not stand in the way of his recognition, for we have already on the Board a homœopath. By that appointment the Government of Sir Alexander Mackenzie has proved itself superior to the narrowness of the professors of the orthodox school of medicine. In a matter of this kind, in an hour of public danger, it may well be expected that the Bengal Government will forgive the sin of not being an Englishman.

Dr. Jelovitz took his degree of Doctor of Medicine at Philadelphia, in the University of Pennsylvania, where he won the first prize, in 1885, by his essay on bubonic plague. Previous to the date of the essay, in 1876, when he was living in Bagdad, an epidemic of plague visited some districts of the Province of Mesopotamia. He studied the disease there, examining over 3,000 cases and attending 300 patients. His treatment of the disease was allopathic. He was associated in the work with Dr. A. Jelovitz, of the Medical College in Buda Pesth. The result was little or nothing. The mortality among the patients was as great as among those who had had no treatment. He then tried hydropathy—cold or hot water douches or steam baths. The diet allowed was milk, alcohol and coffee would be given as stimulants. The results were much better, the deaths being reduced from 80 to 70 per cent. It was still a high percentage. Homœopathy, then practised by Dr. M. L. Jelovitz under

great disadvantages, reduced the rate much lower, to 49. His old associate, Dr. J. A. Jelovitz and other practitioners of the old system, were disposed to attribute the fall to the diminution of the virulence of the disease. This could not be. For the deaths under allopathic treatment numbered as high as before. Dr. M. L. Jelovitz found homœopathy as efficacious in other diseases. In inguinal hernia of an infant of 4 months, he caused the rupture to disappear in 4 days. This almost miraculous cure converted Father Damien, a monk of the Carmelite Order and a qualified physician from the Medical College of Montpellier, to homœopathy. Dr. Jelovitz's successful treatment of diseases at Bombay, where he had established himself in 1879 and again in 1889, was equally marked. There he won over to homœopathy Drs. Thakurdas Kikabhai Dalal, Jannadas Premchand, Vithaldas and others. His experience at Colon, where he was Surgeon of the Hospital of the Panama Canal Company and city physician of the Prefecture, is again in favour of homœopathy. As servant of the State and of the Company, he was not allowed to prescribe other than allopathic medicines, but he was not debarred from administering homœopathic tinctures and globules in private practice. In yellow fever, he found the difference between the two systems of cure. The superiority of the new over the old was great. While almost every case under allopathic treatment ended fatally, all his 19 private patients recovered under the new system. In malarial intermittent fever, however, the sovereign remedy was quinine in large doses. For a time, Dr. Jelovitz practised at Jamaica, in the West Indies, where he had been for the benefit of his health. Just now he comes to us from Bombay, where he was perhaps the first to popularize homœopathy but where he could not find enough room for his energy and activity. Let us hope Calcutta will reap the full benefit of his varied experience in different countries.

WE have said (*R. & R.*, November 7) that the case of "veritable" plague in Calcutta resulting in death, is as real as the previous six cases in which the patients recovered, and that the disease of which Bepin Behary Dutt died was taken advantage of by the neighbours to denounce the factory in which he resided and worked as a nuisance and to have it removed. In confirmation, we append four statements made by two medical practitioners who were called to treat Bepin, by the Manager of the factory and by a neighbour.

Babu Gopal Chandra Bose: I am the manager of the factory where Bepin Behary Dutt, our workman, died on the evening of Tuesday, the 3rd November. Bepin's age was 32 years. The factory is owned by Joygopal Pal, a nephew of Sristidhar Couch, a sugar merchant. Bepin used to draw rupees eighteen per month. Having been a man of inferior position, he could not tell me of his bubo, out of shame. I knew of it afterwards. The workman had scalded his right great toe five or six days before the fever. Attention was drawn to this circumstance at the very time of the scalding. Some of the workmen had applied ink and afterwards salt water. Nothing particularly noticeable happened to Bepin before Sunday when he was evidently suffering from fever. I did not know whether there was any fever before this, or whether it was a continuation of the previous attack. He wished to go home, to his native village, in the thana Indas, district Bankura. This led me to think that he was suffering from some disease. The fever was high on Sunday evening. It was attended by headache. He was under the treatment of Babu Chundry Chatterjee, of Nundorain Sen's Lane, for two days. He was then vomiting bile. On Monday evening, his case becoming serious, he was advised to place himself under the treatment of Babu Kissory Mohun Mookerjee, a homœopathic practitioner, who usually treats our workmen. Babu Kissory was immediately called and gave some medicine which was taken. On the doctor's saying that the case was of a serious nature, Dr. Kali Kristo Chatterjee, of Ramkanto Bose's Street, was sent for. He came after dusk, prescribed some mixture and ordered ice on the head and blister on the nape of the neck. Death took place on the evening of Tuesday. Drs. Simpson and Cobb came that very evening. Bepin had then a little difficulty of breathing and occasional hiccough. The doctors ordered the patient to be taken out of the room, to the open courtyard. They punctured the tip of one of the fingers, and incised an arm near the elbow joint. Then a crucial incision was made in the swollen right groin and a finger inserted into it. Immediately after, Bepin died. It was possible that he could have lived another two hours.

Bepin never regained consciousness since Monday evening. Blood was taken from all the incisions. The doctors wanted the body for *post mortem* examination, but as Hindus we would not agree. A medical inspector went with us to the burning ghat. When the incisions were made none of the medical attendants was present.

Babu Kissory Mohun Mookerji, the homoeopathic practitioner :—

I attended the patient on the evening of Monday, the 2nd November. There was a plaster on the right groin, which could be seen for the patient's half naked state. I saw the man in a state of coma with congested eyes. I pronounced the case hopeless. The temperature was 104. I gave a medicine of which perhaps a dose or two were taken. Then Dr. Kali Kristo Chatterji was called. I did not notice any eruption on the body. He had fever about a month before this attack. I did not know at first that there was a scald in the right great toe, but was informed of it afterwards. The bubo was small and I did not notice any other swelling. I sent information to the Health Officer as I was bound by his circular to report every case of fever attended with glandular enlargement. I do not think it was a case of bubonic plague.

Babu Preonath Mookerji, a neighbour residing opposite the factory :—

I requested Babu Kissory Mohun Mookerji to write the letter, simply because I consider the factory a nuisance. I did not think that so much fuss would be made. About a year since, the neighbours had complained of the unclean state of the factory to the Municipality.

Dr. Kali Kristo Chatterji :—

I saw the patient at about 9 P. M. on Monday and found him unconscious with congested eyes. The temperature was 104, pulse 130, and respiration 48. I was informed that Bepin had syphilis about a year since. Monday was the fifth day of his fever. I had ordered ice on the head and blisters on the nape of the neck and calves. A stimulant mixture was also administered. The patient had tympanites. The scald was on the right great toe. The enlarged femoral gland was on the right side also, but it was a small one. On the morning of Tuesday I found him worse. I am of opinion that it is not a case of bubonic plague. I was not present when Drs. Simpson and Cobb came. I did not notice any eruption on the man's body.

We will quote now the letter of the Health Officer addressed to the Medical Board :—

"I have the honour to report a death from plague which took place at 6-30 P.M. on November 3rd. The information was given to me at 4 P.M. on November 3rd, and the case was visited by Dr. Cobb and myself at 5-30 P.M. The patient died in our presence at 6-30 P.M. and as the friends would not give permission for post-mortem examination I ordered the medical Inspector to accompany the body to the Burning Ghat and to see personally that it was burnt along with the infected clothing. It was impossible to inform the Medical Board in time, in order that the medical members should see the case, owing to the man's

rapid death. An attack of illness prevented me from reporting the case the next day, but I verbally told Dr. Dyson about it in the morning and he expressed his intention of making a local enquiry.

The details are as follows :—

History.—Bepin Behary Dutt, aged 32 years, a sugarcandy maker, residing at No. 1 Raja Rajbullub's Street, is stated to have been seized with a sudden attack of headache, fever, pain and enlargement of the glands of the right groin on November 1st. The pain in the groin became so severe that he was confined to bed and could not straighten his leg. The symptoms increased in severity and on November 2nd about 3 P.M. the headache became intense and abdomen swollen. At 8 P.M. he became insensible. Dr. K. N. Mookerjee states that he was called in at 10 P.M. on November 2nd and found the patient in a comatose condition picking at the bed clothes, and also in high fever with congested eyes. The glands in the right groin were enlarged. He informed the friends that the case was hopeless and the next morning sent a post card to the Health Office, reporting the case. Another medical man, Dr. Chatterjee, was called in later and it is stated, found the temperature to be 104. The patient is said to have scalded his toe more than a fortnight ago, but we found no marks on the foot.

Condition on examination by Dr. Cobb, Dr. Mitra and myself.—The patient was lying insensible, breathing with a sighing and moaning noise. The eyes were sunken and the conjunctiva very much congested. The direction of the eyes was upwards and to the right. Pupils were contracted and insensible to light. The tongue was furred in centre and red at tip and edges. The pulse was 160 and respiration 32 per minute. The body, especially the head, face and legs was covered with a profuse perspiration. Petechiæ in large numbers were to be seen on the chest and abdomen, and a few on the back, arms and legs. They varied in size from 1-10th to a quarter of an inch in diameter and did not disappear on pressure. Both the inguinal and femoral chains of lymphatic glands in the right groin were enlarged, two of the former and three of the latter were felt to be swollen. In the inguinal region the largest was the size of a boy's marble and in the femoral that of an almond. Blood was taken from the enlarged femoral gland and from the median basilic vein. Microscopic examination showed diplobacteria."

Our remarks will be found in the leader.

REIS & RAYYET.

Saturday, November 21, 1896.

PLAGUE AND HAFKINISM.

THE meeting of the Calcutta Corporation on the 12th November, was signalized by an acrimonious controversy over two debatable subjects—the bubonic plague at Calcutta and the Hafkine cholera inoculation. The first arose out of the refusal of the Health Officer to answer questions that struck at the root of the case reported by him as one of veritable plague. In reply to one of the questions, Dr. Simpson said through the Chairman :—

So long as he holds the appointment of Health Officer to the Corporation he will decline to answer any question relating, as this question does, purely to medical details of a nature which should not, in his opinion, form the subject of questions at a Commissioners' meeting. Apart from this, the fact that the present question contains gross insinuations against Drs. Cobb and Simpson, affords, in the Health Officer's opinion, a complete reason for his declining to notice the question beyond mentioning that the man was in a condition of profound insensibility, and could not possibly have felt the three trifling punctures made, and stating emphatically, once and for all, that for these insinuations there is absolutely no foundation whatsoever.

The municipality is a miscellaneous body of professionals and non-professionals. The professions are many, though lawyers number the largest. Medical and engineering branches are not absent. There are about a half dozen medical men. Dr. Sanders holds a position which cannot fail to command a hearing, if not implicit acquiescence, when he speaks. It might be that Babu Nolin Behary Sircar, who put the questions, was the mouthpiece

The Indian Association for the Cultivation of Science.

210, Bow-Bazar Street, Calcutta.

(Session 1896-97.)

Lecture by Babu Ram Chandra Datta, F.C.S., Monday, the 23rd November, at 4-15 P.M. Subject: Properties of Water concluded. Hydroxyl and Nitrogen.

Lecture by Babu Ram Chandra Datta, F.C.S., Tuesday the 24th Inst. at 4-15 P.M. Subject: Atmospheric air.

Lecture by Babu Ram Chandra Datta, F.C.S., Wednesday, the 25th Inst. at 4-15 P.M. Subject: Ammonia.

Lecture by Babu Rajendra Nath Chatterjee, M.A., Wednesday, the 25th Inst. at 7 P.M. Subject: Force and Motion.

Lecture by Babu Ram Chandra Datta, F.C.S., Thursday, the 26th Inst. at 4-15 P.M. Subject: Nitric acid.

Lecture by Dr. D. N. Chatterjee, B.A., M.B., C.M., Thursday, the 26th Inst., at 5 P.M. Subject: Circulation.

Lecture by Babu Ram Chandra Datta, F.C.S., Saturday, the 28th Inst. at 3 P.M. Subject: Oxides and Oxy-acids of Nitrogen.

Lecture by Babu Girish Chandra Bose, M.A., F.C.S., M.R.A.S., &c. Saturday, the 28th Inst., at 4-30 P.M. Subject: Morphology—Symmetry of Flowers, Floral Diagrams and Formulæ.

Lecture by Dr. Niranjan Sircar, M.A., M.D., Saturday, the 28th Inst., at 6 P.M. Subject: Histology—Bone, Muscle.

Admission Fee, Rs. 4 for Physics, and Rs. 4 for Chemistry; Rs. 6 for both Physics and Chemistry; Rs. 4 for Physiology; Rs. 4 for General Biology; Rs. 6 for complete course of Physiology and Biology. The charge for a single lecture is 4 Annas.

MAHENDRA LAL SIRCAR, M.D.,
Honorary Secretary.

Nov. 21, 1896.

of others—medical Commissioners who do not sail with Dr. Simpson. The open affront, by no means the first of its kind, given to the Commissioners, could not be lightly passed over, and the matter will be discussed at a future meeting. The medical details of the case could not be so abstruse as to be utterly beyond the comprehension of educated laymen. Dr. Simpson did not explain why, in his opinion, the subject should not be discussed at a meeting of the Commissioners. He might have avoided technical phrases and stated in ordinary language his views and doings. That would not have been inconsistent with the professional dignity or character of the Health Officer of a town threatened with plague. However regularly acquired, medical knowledge can by no means be a monopoly. Jurors, taken from the sensible part of the population, have frequently to decide the most complicated questions bearing upon the abstrusest branches of medical science. In the Gardiner peerage case, lay men laid down the law, rejecting a vast mass of medical testimony coming from experts of admitted reputation. The jealousy which medical men feel for even persons of liberal culture when honestly striving to obtain detailed information, is frequently insane. In view of a public calamity, the medical man that refuses to lay bare the secrets of his science from a conviction that those secrets will be unintelligible or that his professional dignity will suffer, courts nothing but contempt. Then professional dignity degenerates into pure folly. In this age of general inquisitiveness, the child of Galen that expects his *fulwas* unsupported by reasons to be accepted as oracles, cannot but be brushed aside by society as an intolerable nuisance or a strange anachronism.

The questions put to the Health Officer were, indeed, searching, and possibly intended to expose a conceived wrong. It was believed that Dr. Simpson had greatly exceeded his authority, to the serious injury of others, in pursuit of a policy of his own, though in the interest of the town. The neighbours of Bepin cried that the municipality had killed him; the workmen of the factory in which he was employed were loud in their condemnation of the action of the medical officers of the Corporation. Under the circumstance, an enquiry into the conduct of the municipal officers was called for, and the questions were framed to elicit the truth. If Dr. Simpson's *ipse dixit* were to be accepted, it might as well be said that a diploma of medical knowledge raises the holder above the law; that, in fact, it covers a multitude of sins. May not one fitly declare—Vanity thy name is Simpson?

The statements published in another part of this number shew that incisions were made by Dr. Simpson or his friend in the right median basilic vein (the vein in the right arm on the flexor side of the elbow joint) and in the right groin. The man was insensible and, therefore, according to the Health Officer, the punctures were harmless. The word puncture excludes the questions whether they were large openings by the lancet and whether there was any flow of blood from the cut surfaces? It must be supposed that blood was taken in sufficient quantity for bacteriological investigation. There was nothing to restrict the flow of blood to the exact quantity required for scientific purposes. The last moments and the unconscious condition of the helpless and unfriended patient might not be any protection against the reckless plunge of the knife by the operating surgeon bent

upon proving a theory. But is it too much to suppose that this abstraction lessened the duration of life, which it should always be the aim of the doctor to prolong? There are doctors and doctors. An Indian student studying in England, attacked by influenza, was given up by his attending physician. On enquiry by the father who happened to be there, the medical attendant quietly informed him that there was no hope of recovery and that medicines had been administered for making the patient die as quietly as possible. The horror-stricken father ran to another physician, who thought and treated differently, and the boy recovered. Was it not a reckless act of inhumanity to take blood out of a man that died immediately after the operation? There would be a justification for the bloody deed, if it was believed to offer a chance of saving the life of the victim himself. Is it open to a medical man to work on a patient for hastening his death, or inflict on him wounds, for other purposes than the benefit of the poor fellow himself, because he was supposed to be insensible to pain? No measure of advantage, immediate or remote, to even princes and crowned heads, or, for that matter, to the entire body of the greatest benefactors of mankind, can possibly excuse the extraction of even a drop of blood from the meanest wretch lying on a sick-bed, if such extraction hastens death by a minute. The criminal code of every civilised State has clearly defined the character of such an act. Science would be an intolerable nuisance,—a veritable crime against laws, both human and divine,—if her progress were to be achieved by such means. The zeal for extending the bounds of science ought to be restricted by considerations of reason.

Then, again, there was breach of medical etiquette and violation of the law. The Municipal doctors were not empowered by law to make the punctures. The attending physicians were not consulted and the punctures were made in their absence and without their knowledge, and without permission of the friends and relatives of the punctured. Himself blind to medical decorum, Dr. Simpson hesitates not to take shelter behind the fancied rights of a medical man. If it cannot be denied that injury, which hastened the death, was inflicted on a dying man, the Corporation cannot avoid a suit for damages, and its servants, a criminal prosecution. For the rashness of their servants or agents, the Commissioners are liable under the law, and those servants cannot escape the criminal consequences of their own acts. The refusal of Dr. Simpson to submit to a fair and open enquiry, is more reprehensible than his perpetrated act. For his conduct, his masters will suffer. Yet he thinks it his privilege to refuse them information to enable them to judge of his act. Brought before a Court of Justice, will he be allowed to hold the same language, to speak in the same autocratic tone?

The enquiry made shows that Bepin Behary Dutt had bubo before fever. The headache might be caused by the intense heat of the furnace and the sugar pan. The first medical attendant, Babu Chundy Charan Chatterjee, confident that the glandular enlargement was syphilitic, had ordered mercury plaster. It is a significant fact that inguinal gland appeared on the side of the scalded toe. Bepin could not work from Sunday, the 1st November. There is no knowing when the fever shewed itself, for no one had taken care to ascertain the fact. The disease assumed a severe form on the

evening of Monday, the 2nd November. Bepin had been complaining of severe headache from that day. In the evening, he became unconscious, when the medical attendant of the factory, Bibu Kissory Mohun Mookerji, was called in. On his pronouncing the case hopeless, Dr. Kill Kristo Chatterjee was sent for at 9 P. M. None of them believes Bepin had bubonic fever.

It is possible that the man had fever for five or six days before he became unconscious. He died on the evening of Tuesday, the 3rd November, in the presence of Dr. Simpson. The dissolution was rapid but not sudden. In low remittent fevers, such rapid termination is not unknown. Patients have died in forty-eight hours. The suddenness of death is not a peculiarity of bubonic fever. It has been observed in almost all kinds of virulent fevers. From the 3rd to the 18th November, a second case has not occurred in the same house, viz., 1 Raja Rajbullab's Street. This is contrary to the known character of bubonic fever. If Dr. Simpson could come upon a real case of plague, he would have recovered his lost reputation. The hasty steps he took in spreading a false alarm, have damaged his character as a medical man. He acted more like an old hysterical woman than the observant Health Officer of a municipal corporation, and seems yet not convinced of his error. He rather sticks to it and nurses it as a fondling, and will go to any length than abandon it and save himself from a very untenable position.

The passages-at-arms between Dr. Sanders and Mr. Stevens over the Haffkine business were a fight between a medical man and a lay man. Had Dr. Sanders been of the same metal with Dr. Simpson, he would have declined to enter the lists.

Mr. Stevens' reference to Sir Joseph Lister's address was unfortunate. If Mr. Stevens had been a medical man he would have refrained from making the allusion, for then his reputation would have been at stake. But not being of the profession, he has hardly anything to lose, though it cannot be said that he loses absolutely nothing. We wonder there was no one to point out the mistake. Sir Joseph Lister's antiseptic surgery for incised surfaces has no relation with Haffkine's method. Bacteriology is the fashion of the hour, and there are good and evil bacteria. If the one species destroy, another kill the destroyers. Openings made by the lancet may give free entrance to the evil-doers. Dr. Haffkine's way is not strictly Pasteur's. Pasteur's inoculation in hydrophobia is not of any cultivation of bacilli because there is no specific bacillus to be found. In Koch's comma bacillus we have not the real cause of cholera. Dr. Klein, medical officer of the Local Government Board of London, is against that theory. There are many German and French bacteriologists who do not recognize Koch's cholera bacillus, though his tubercle bacillus has been accepted as the cause of consumption. Koch was hasty in his conclusion about the cholera bacillus. The other theory was the result of patient research for many years. Having won one laurel, he was ambitious of gaining another. That ambition stood in the way of diligent and due enquiry in the last instance. Before accepting the theory of Haffkine, we must be sure that the comma bacillus of Koch is the real cause of cholera.

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS 19, SOUTHAMPTON BUILDINGS, HOLBORN, LONDON.

There are competent persons who do not believe in Haffkinism and who even go so far as to say that it has been a failure. Officers are not wanting in the Calcutta Health Officer's department who privately hold a different opinion from their chiefs. In the present state of scientific advancement, nothing can be taken on trust. In the institutions for practical investigations, the workers take up a possible theory either to prove or disprove it. If there be a consensus of opinion in favour of one, then only can it be accepted. Take, for example, photography by X rays. A practical fact has been discovered. The physicists took up the method for research and have invariably succeeded. Haffkine's cure or security remains to be proved.

OUR LONDON LETTER.

BOOKS.

Isbister & Co. have brought out in two volumes the life of the great Prelate William, Connor Magee, Archbishop of York. It is more an autobiography than a life, and it is doubtful whether the compiler, Canon Macdonnell, of Peterborough Cathedral, has in every instance exercised a wise discretion in publishing letters of the witty Prelate reflecting on public characters recently passed away, or still among us. Dr. Magee was, on the admission of all competent judges, "a great man, a great prelate, and a great wit." He could not tolerate "fools" whether among his brethren on the Episcopal Bench, the peers of England, or among his own clergy. He gives a capital description of an evening at the Metaphysical Society. A paper was read to prove "the impossibility of doing without the indefiniteness of words." The author was the celebrated Mark Pattison, Rector of Lincoln College, Oxford, who is thus described: "Imagine a capital description of an opium eater restored to life, and dressed in the dinner dress of the 19th century, that is M. P. free thinker and free writer, but certainly not free speaker." Pattison was certainly a curious study in himself. He went the whole length with Cardinal Newman in the Tractarian controversy, but drew back when Newman took the final plunge into Romanism. His widow, subsequently married the saintly Sir Charles Dilke. To come back to the Archbishop. He writes of Dr. King, the present Bishop of Lincoln: "Lincoln was, as usual, inopportune and mischievous in the most saintly way." "Those who have followed the public character of Dr. King will appreciate the witty sarcasm of this description. Again, "Old Lincoln was pressing upon us a preposterous 'Encyclical' as a panacea for all our troubles. A heap of sweetly solemn platitudes, such as he alone can indite, and such as he alone believes can be of the slightest use to man, woman or child." Of Oxford, he writes in 1830: "How I wish there was some male intellect here to guide and strengthen these young minds for good, instead of such merely *feminine* minds of such monks in petticoats as Siddon and—." Magee was the first Irishman that had ever held an English see since the Reformation.

To show that he was not in alliance with any sectional church party, I quote the following in connection with Disraeli's Public Worship Bill of 1874: "The determined Erastianism of the Archbishop (Pait), the exasperation of the High Church clergy, the dishonesty of the Ritualists, the fanatical bitterness of the Evangelicals, and the sublime unprincipledness of Dizzy," &c. &c. Gaskell, after spending two days with him at the late Lord Bunsby's, in 1890, he describes as the "most amazing old man in Europe," while of Lord Beaconsfield when dying he wrote: "Beaconsfield is, I think and fear, dying by quarter inches. What a struggle and what a man! and what a real loss to English statesmanship!" Of men of the stamp of John Burns of Battersea, he writes:

"Surely of all governments that by hysterics is the worst, and England is being more and more governed by the hysteria of half-educated men and women. The aristocratic oligarchy of the last century was selfish and short-sighted as regards domestic policy; but it was cool, far-seeing, and prompt as regards foreign policy. The boorish voter who sustained that aristocracy and squirearchy was dull and impassive, and open to bribery and beer; but he was stolid and bovine, and never got into a fury except against the Pope. But your modern, half-taught, newspaper-reading, platform-haunting, discussion club, frequenter, conceited, excitable, nervous product of modern town artisan life, is a most dangerous animal. He loves rant and cant and fustian, and loves too the power for the masses that all this rant and cant is aiming at, and he seems to be rapidly becoming the great ruling power in England. Well, you and I are in our 57th years. Let our children look to it. But the England of 30 years hence, if Dr. Cumming will let the world

last so long, will surely be the nastiest residence conceivable for any one, save infidel prigs and unsexed women."

On the Bulgarian atrocities agitation he uses the following words, equally applicable to the present Armenian agitation :

"I doubt if the whole history of democracy, rife as it is with instances of passionate injustice, supplies a grosser one than the cry against the Ministry of the last three weeks.

Heaven knows the Turk is bad enough, but he is no worse now than he was, and was *known* to be, 24 years ago, when the English nation hissed Prince Albert because he doubted the wisdom of our fighting for him.

I detest massacre, but I detest nearly as much the dishonesty of making political capital out of it; and I am disgusted with the blatant and mischievous nonsense that our platform spouters are uttering at every meeting on a question of which they know absolutely nothing."

QUALIFICATIONS AND DUTIES OF MEDICAL OFFICERS OF HEALTH.

[Extracts from *A Treatise on Hygiene and Public Health*, edited by Thomas Stevenson, M.D., and Shirley F. Murphy, Medical Officer of Health of the Administrative County of London.]

The qualification is determined by statute. The duties are to some extent prescribed by regulations, except, and to some extent, they have been prescribed by statute in connection with particular matters. Section 191 of the Public Health Act provides that a person shall not be appointed medical officer of health under that Act unless he is a legally qualified medical practitioner. Further qualifications have been imposed by Sec. 18 of the Local Government Act, 1888, which in effect provides that, except where the Local Government Board for reasons brought to their notice may see fit in particular cases specially to allow, no person shall thereafter be appointed medical officer of health of any county or sanitary district, or combination of sanitary districts, or the deputy of such officer, unless he be legally qualified for the practice of medicine, surgery and midwifery. The same section also prohibits the appointment of any person after January 1, 1892, as the medical officer of health of any county, or of any district or combination of districts, which contained according to the last published census for the time being a population of 50,000 or more inhabitants, unless he is qualified as above, and also either is registered in the medical register as the holder of a diploma in sanitary science, public health or State medicine, under section 21 of the Medical Act, 1886, or has been during three consecutive years preceding the year 1892, a medical officer of a district or combination of districts with a population according to the last published census of not less than 20,000 or has before the passing of the Local Government Act been for not less than three years a medical officer or Inspector of the Local Government Board.

The regulations of the Local Government Board provide that the following shall be the duties of a medical officer of health in respect of the district for which he is appointed, viz :—

1. He must inform himself as far as practicable respecting all influences affecting or threatening to affect injuriously the public health within the district.

2. He must inquire into and ascertain by such means as are at his disposal the causes, origin, and distribution of diseases within the district, and ascertain to what extent the same have depended on conditions capable of removal or mitigation.

3. He must by inspection of the district, both systematically and at certain periods as occasion may require, keep himself informed of the conditions injurious to health existing therein.

4. He must be prepared to advise the sanitary authority on all matters affecting the health of the district, and on all sanitary points involved in the action of the sanitary authority; and in cases requiring it, he must certify, for the guidance of the sanitary authority or of the justices, as to any matter in respect of which the certificate of a medical officer of health or a medical practitioner is required as the basis or in aid of sanitary action.

5. He must advise the sanitary authority on any question relating to health involved in framing and subsequent working of such bye-laws and regulations as they may have power to make; and as to the adoption of sanitary authority of the Infectious Diseases Prevention Act, 1890, or of any sections of such Act.

6. On receiving information of the outbreak of any contagious, infectious, or epidemic disease of a dangerous character within the district, he must visit the spot without delay and inquire into the causes and circumstances of such outbreak, and in case he is not satisfied that all due precautions are being taken, he must advise the persons competent to act as to the measures which may appear to him to be required to prevent the extension of the disease, and take such measures for the prevention of disease as he is legally authorised to take under any statute in force in the district or by any resolution of the sanitary authority.

7. Subject to the instructions of the sanitary authority, he must direct or superintend the work of the inspector of nuisances in the way and to the extent that the sanitary authority may approve, and on receiving information from the inspector of nuisances that

his intervention is required in consequence of the existence of any nuisance injurious to health, or of any over-crowding in a house, he must, as early as practicable, take such steps as he is legally authorised to take under any statute in force in the district or by any resolution of the sanitary authority as the circumstances of the case may justify and require.

8. In any case in which it may appear to him to be necessary or advisable, or in which he shall be so directed by the sanitary authority, he must himself inspect and examine any animal, carcass, meat, poultry, game, flesh, fish, fruit, vegetables, corn, bread, flour, or milk or any other article to which the provisions of the Public Health Act, 1875, in this behalf apply, exposed for sale, or deposited for the purpose of sale or of preparation for sale, and intended for the food of man, which is deemed to be diseased, or unsound, or unwholesome, or unfit for the food of man, he must give such directions as may be necessary for causing the same to be dealt with by a justice according to the provisions of the statutes applicable to the case.

9. He must perform all the duties imposed upon him by any bye-laws and regulations of the sanitary authority, duly confirmed, in respect of any matter affecting the public health, and touching which they are authorised to frame bye-laws and regulations.

10. He must enquire into any offensive process of trade carried on within the district, and report on the appropriate means for the prevention of any nuisance or injury to health therefrom.

11. He must attend at the office of the sanitary authority, or at some other appointed place, at such stated times as they may direct.

12. He must from time to time report in writing to the sanitary authority his proceedings, and the measures which may require to be adopted for the improvement or protection of the public health in the district. He must in like manner report with respect to the sickness and mortality within the district, so far as he has been enabled to ascertain the same.

13. He must keep a book or books, to be provided by the sanitary authority, in which he must make an entry of his visits, and notes of his observations and instructions thereon, and also the date and nature of applications made to him, the date and result of the action taken thereon and of any action taken on previous reports; and must produce such book or books, whenever required, to the sanitary authority.

14. He must also prepare an annual report to be made to the end of December in each year, comprising a summary of the action taken, of which he has advised the sanitary authority to take during the year for preventing the spread of disease, and an account of the sanitary state of his district generally at the end of the year.

The report must contain an account of the inquiries which he has made as to the conditions injurious to health existing in his district, and of the proceedings in which he has taken part or advised under the Public Health Act, 1875, so far as such proceedings relate to those conditions; and also an account of the supervision exercised by him or on his advice, for sanitary purposes over places and houses that the sanitary authority have power to regulate, with the nature and results of any proceedings which may have been so required and taken in respect of the same during the year. The report must also record the action taken by him, or on his advice, during the year, in regard to offensive trades, to dairies, cowsheds, and milkshops, and to factories and workshops, and must contain tabular statements (on forms to be supplied by the Local Government Board, or to the like effect) of the sickness and mortality within the district, classified according to diseases, ages, and localities. If the medical officer of health ceases to hold office before December 31 in any year, he must make the like report for so much of the year as has expired when he ceases to hold office.

15. He must give immediate information to the Local Government Board of any outbreak of dangerous epidemic disease within the district, and transmit to them a copy of each annual report and of any special report. He must make a special report to the Board, of the grounds of any advice which he may give to the sanitary authority with a view to their requiring the closure of any school or schools in pursuance of the code of regulations, approved by the Education Department and for the time being in force.

16. At the same time that he gives information to the Local Government Board of an outbreak of infectious disease, or transmits to them a copy of his annual report, or of any special report, he must give the like information or transmit a copy of such report to the county council of the county in which his district may be situated.

17. In matters not specifically provided for in these regulations he must observe and execute any instructions issued by the Local Government Board, and the lawful orders and directions of the sanitary authority applicable to his office.

18. Whenever the Local Government Board make regulations for all or any of the purposes specified in section 134 of the Public Health Act, 1875, and declare the regulations so made to be in force within any area comprising the whole or any part of the district, he must observe them so far as the same relate to or concern his office.

(To be continued.)

Letter to the Editor.

THE CONDITION OF THE MAHOMEDAN COMMUNITY AND THE MEANS OF ITS AMELIORATION.

BY KHAN BAHADUR D. H. AHMED.

(Concluded from page 502.)

Mr. Naseemul Hakh appears to believe that I am advocating the repeal of our laws of inheritance. I do nothing of the kind. Every civilized nation except the Mahomedan has its laws of inheritance supplemented by the freedom to make testamentary dispositions. What I desire and propose is that the Mahomedans should, while continuing to be governed by the Arab law of succession, be granted the freedom to bequeath their property to a single heir. Mr. Naseemul Hakh says: "Since it is admitted that it is wellnigh impossible for any community to advance materially and prosper so long as each member of that community does not help the cause of advancement by his personal exertions and independent efforts, it is, indeed, difficult to make out how the retention of wealth by a limited circle could prove to be conducive to the general good of the community at large." It is wrong to suppose that if, as a general rule, you give pecuniary aid to people you help them to rise. Money passes out of the hands of a man of indolent and extravagant habits just as water passes through a sieve. The very expectation that he will receive pecuniary aid will help to make him indolent and thriftless. It is not money that a man requires so much to help him to rise as character; and if the discipline which he gets stifles the desire for activity and breeds the habit of easy contentment, if it does not teach him to curb his desires or to acquire habits of thrift, the wealth he will inherit will soon be squandered. Under a law of primogeniture in the past and a law of wills in recent times, England and every other European country have progressed. Under a law of compulsory division of property, the Mahomedans of India, especially of Bengal, have declined. The discipline given by a law under which no man is sure of getting any share of his father's property is different from the discipline given by the law of compulsory division.

The question has been put to me, what reason there is to suppose that the sole recipient of his father's property will not dissipate his inheritance. I have already said that the character of a people can only be gradually and slowly changed and a law of wills will take more than a generation to have any effect on our character. The want of energy and thrift, the habits of inactivity and extravagance are the result of the discipline given to us by the law of compulsory division. Every son lives on the expectation of a share of the family property, he feels no necessity or desire for self exertion. Every son is bred and reared in the father's style of living, he is scarcely called upon to curb his desires or postpone their gratification, and the inevitable consequence is that he acquires the habit of self indulgence. When you get the right of making a will you will feel that you have to preserve a property and a name. You will also feel a pleasure in checking your expenditure in order to provide for other children. Your sons will never be sure of getting a share of the family property; there will thus be a check to indulgence and an incentive to exertion. In 2 or 3 generations the character of the people will have considerably improved; activity and thrift will become the general rule and the dissipation and debauchery of Zemindars, of which "a Behari Musalman" complains, will become an exception.

I have also been asked why, when the law of sub-division of property prevails amongst Hindus, we do not find them lose habits of energy or habits of thrift. This law is amongst them traversed by other laws. In the first place, the sub-division of property is not so minute as amongst ourselves, for daughters get no share and, secondly, the Brahmanic religion, by its imposition of duties to be performed and of ceremonies to be observed for the welfare of the deceased, gives an importance to the eldest son, which brings him the respect and allegiance of his brothers. This feeling was strengthened in the past by various other causes which it is needless here to specify and the result is the joint family system. The order and security of the British Government is gradually breaking it up, but the Hindus have now got a Wills' Act which serves to prevent the sons of a father from acquiring thriftless or indolent habits.

"Khaer Khwahi Islam" seems to desire the adoption of the joint family system. He says: "It is not compulsory that we must divide; on the other hand, if circumstances point the other way,

we should try to live amicably and united so that there might be no occasion for such a division." It is easy to put down a proposition on paper, but "Khaer Khwahi Islam" should have shewn how it would work or whether it would work. He does not tell us how he proposes that we should take to the joint family system which, though ages of coercion and discipline have made it natural to our Hindu neighbours, is foreign to the course of our development and the habits of our community. He does not tell us how he proposes to control the conflicting desires of the several heirs who are entitled to a share of the property. The fact is, that the joint family system will not work, and the only alternative is that we must have a law of Wills. An aristocracy will be useful in this way that a class of our own community will have funds which they might devote to the education of the poorer members. It will be useful in another way, that it will give us a standard to which to look up and every Mahomedan will endeavour to rise up to it, there will thus be an incentive to thrift and an incentive to activity. A more important function which a territorial aristocracy in the present state of our society will be able to perform is the influence which it will be able to exercise on the deliberations of the Government and in protecting the interests of the Mahomedan community.

I remarked in a previous letter that "the ultimate overthrow of the Mogal Empire" as well as the Saracenic and Moorish Empires "was due to the absence of a territorial aristocracy, and such an aristocracy can never grow up under a law of compulsory sub-division of property." "Khaer Khwahi Islam" observes that I "will perhaps next say—the Hindus lost India to the Mahomedans, for want of a territorial aristocracy." The Hindus undoubtedly had a powerful aristocracy, and it was this aristocracy which made Alexander retire from the conquest of India, which held the Sassanian Anosheerwan at bay, which prevented the advance of the lieutenants of the Omeiyads of Damascus, and which repeatedly opposed Mahmood of Ghazni. A cholera patient dies, in spite of the medicines administered; you must not conclude that the medicines are useless. If the Rajpoot aristocracy failed to arrest the onward march of the Mahomedan arms, you must not suppose that a territorial aristocracy is of no use. On the contrary, history proves that, in a particular state of society, it has rendered splendid services, nay, under certain circumstances, it has proved the only institution which is able to prevent the disruption of the State and the extinction of the community.

"Khaer Khwahi Islam" asks, "Does Mr. Ahmed mean to say that there was no territorial aristocracy during the Mahomedan rule?" Yes, I do mean to say so. An aristocracy does not mean the individuals who at any particular time hold landed property; it means an hereditary aristocracy strong from long and prescriptive possession, strong in the affections of its tenantry and retainers, strong from the remembrance of great and honourable traditions. Such an aristocracy we never had. Neither the Mahomedan law nor the law of primogeniture applied to the *jaigirs* and *taluqs* of which he speaks. They were held at the mere caprice and were at the absolute disposal of the sovereign, and each bestowed them upon his own adherents, so that they were never held by a family for even 2 or 3 generations. The Oudh Taluqdars to whom "Khaer Khwahi Islam" refers, are the families who were found in possession of landed property when Oudh was annexed or after the mutiny of 1857-58 had been put down. The Mahomedan Taluqdars are not old families, and they have continued to this day not by the operation of the Mahomedan law of succession but by the operation of the Oudh Taluqdars' Act passed on their behalf by an alien Government. The proportion of Mahomedans in Oudh is very small compared with their number in Bengal, but the Mahomedans of Oudh do not only hold their own against the Hindus of the Province, but hold a position of very considerable influence. The reason is that the Mahomedans of Oudh have a territorial aristocracy.

The "Muslim Chronicle" says that laws and institutions which once made us great cannot be at fault, and a "Shamsul Olema" says that if there were any inherent defects in the Mahomedan laws and institutions the Mahomedan race could not have attained to the greatness and prosperity which they enjoyed in the palmy days of Islamic supremacy in Asia, Africa and Europe. He might with equal plausibility say that, as the Arabs gained their supremacy and greatness under a system of absolute monarchy and that as they were never without the law of polygamy or the institutions of slavery absolute monarchy, polygamy and slavery must be good for all times. I might with equal justice retort that there are inherent defects in our social and political organisation and in our laws and institutions—because, while in possession of them, we have come down to our present condition—when Turkey is unable to govern and is being shorn of province after province, when Algeria, Egypt and Bokhara and Samarkand are under the rule of Christian foreigners, when Persia is unable to introduce the simplest reforms, and when, as Mr. Yakuuddin says, "the word 'Musalman' has become a byword of reproach in the land" of Bengal.

The waters of the Sone increased, at the beginning, the produce of the land irrigated therefrom, but it has since been found that

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

the productive powers have diminished and the soil has deteriorated. Would you say that the produce of land having once increased from the irrigation, there cannot be any defect in the water of the Sone? Nations and communities decline, because at the proper time they fail to make the necessary changes in their social and political organization, and the very same laws and institutions, which at the outset led them forward in the march of civilization, impair after a time and deteriorate their character, paralyze their efforts, and make them sleep the sleep of lethargy.

The "Moslem Chronicle" believes that it is the want of leaders that prevents our progress. Does he mean to say that there may be leaders without any definite purpose to which to lead the community? You cannot expect a leader to arise when the great majority of the community has no notion how to arrest the decline in the condition of the Mahomedans of Bengal; nor can any man become a leader unless he has got a clear conception of what ought to be done, and no man in our society has had any such conviction. There is a superstition that Government employment is the panacea for all our evils. But only an infinitesimal portion of a community can ever hope to enter the service of the State, and it will be a serious calamity to a community if it comes to look upon Government employment as the principal aim of life. There is a strong notion prevailing at this moment that education is the thing which will tend to improve our social and political condition. It is a well founded idea, but why cannot we get educated? There are colleges at all large centres, there are schools in all districts and in many sub-divisions; there are seminaries for children also everywhere. Why then do you not get your education? Simply because you are poor and cannot afford to get it; and yet there are men who hold that the Mahomedan should never strive after the riches of this world!

"Khaer Khwahi Islam" says, "if Mahomedans are indifferent to the acquisition of education it is surely no fault of Islam that they are so." I have never maintained any such doctrine. The fact is, that he and I differ in the use of the word "Islam." I mean by Islam the religious and moral truths which are for all times and all climes, while he includes in it the laws and institutions established for the government of the Arab people. He blames "the people because they do not follow the teachings of Islam," and asks "How can then character be perfect when they do not observe their religious teachings?" I should like to ask him why they do not observe their religious teachings? To what does he ascribe this defect in the character of the Mahomedans of Bengal and of India?

It is doubtful whether the Mahomedan community have any definite conception of what progress means. The rise of religious schism indicates that the community has life and vigour but the majority even of educated Moslems desire that the Ferazis of Eastern Bengal or the nonconformists of the North-West should be put down and extinguished; they have no idea that intellectual activity must be followed by religious schism. At any rate, there can arise no leader without earnestness of purpose and a man cannot be earnest unless he is thoroughly convinced. When we form an accurate conception of what ought to be done, when we are fully convinced that it must be done, when we have a clear and definite aim, there will appear a practical leader in the fullness of time to carry us on to work.

In a country where the democratic form of government prevails, leaders spring up from all classes and all sections of the people, from landholders and fundholders, from merchants and traders, and even from artisans and workmen. But amongst a people who are comparatively at an early stage of civilization, leaders do not arise from the ranks of the lower orders or even from amongst the educated classes, but appear in the body of the landed aristocracy. Leaders who rise in this body or have the support of this body are the natural leaders of the people, and we should all urge our influence to resuscitate the Moslem aristocracy rather than seek for impossible leaders. The "Moslem Chronicle" bewails the intellectual torpor of the Mahomedans of Bengal. Given the conditions of our society, intellectual torpor must be the consequence. Intellectual activity presupposes the existence of a leisured class; and a leisured class does not exist amongst us in Bengal, for such a class cannot exist in a community which does not possess wealth.

The government of a country by an alien race is an abnormal state of affairs, and the government of India is in the hands of a people whose social and political discipline is far in advance of that of all the communities comprising India. In such a state of affairs, a Surendra Nath, an Omesh Chandra, or an Ananda Mohan may wield considerable power, but they possess this power only because they have at their back the influence and support of a large and powerful body of landholders. It is needless to repeat that wealth is power and landed property is the only durable form of wealth, and the Moslem community cannot have landed property without the right of preventing minute subdivisions or without the right of making testamentary dispositions. It is necessary therefore that we should modify our laws of inheritance.

"A Behari Mosalman" has quoted, "This day I have made your religion perfect" and "you are more aware of your worldly af-

fairs than I am." I may be permitted to ask if matters of inheritance and marriage and slavery are not worldly affairs. Imam Gazzali says, "Religious knowledge is knowledge which can be obtained only through revelation by means of prophets; it cannot be acquired like mathematics by means of the intellect; it cannot be acquired like medicine by means of experience and experiment; it cannot be acquired like language and idioms by means of hearsay and traditions." If the Hindus, the Parsis, the Greeks and the Romans could find their own laws, and if the Russian, the German, the English and the French have been able to establish their own institutions, there is no ground for supposing that the development of laws or the evolution of institutions are transcendental to the reason of man.

The great mistake in the constitution of Moslem society is that we have taken laws to be intended for all ages and all countries when they were meant only for the early ages of Islam and for Arabic-speaking countries. "A Shamsul Olema" says, "It should be borne in mind that to a true Mahomedan, Islam is a perfect religion.....and that its laws and institutions.....are immutable." "An Indian Mosalman" says, "In all discussions on subjects which concern the followers of Islam, the first point to bear in mind is that our social and religious laws are not separate; any attempt to separate them is sure to end in failure, and the person who should wish to do so would not be a reformer but a destroyer."

Let these gentlemen take heed that unless we succeed in distinguishing between the obligation to believe in religious and moral truths and the obligation to believe in the propriety of civil and political laws, a general, hopeless and irretrievable ruin will overtake our community in India.

STRONG ENGLISH WORDS.

WHEN a person says "I suffered excruciating pain," he expresses a fact in the strongest words afforded by the English language. The word "excruciating" comes from *cruz*, a cross, and signifies an intensity of agony comparable only to that endured by one who undergoes the barbarous punishment of crucifixion. There are some diseases which, for a time, cause pain of this acute and formidable nature. To find a relief for it, when possible, is at once the impulse of humanity and the studious desire of science. Two brief examples may indicate what success is attending the effort to both comfort and cure cases of this kind.

"Nearly all my life," writes an intelligent woman, "I have borne the burden of what appeared to be incurable illness. I always felt heavy, weary, and tired. My appetite was poor, and after eating I had a *cruel pain* at my chest and between the shoulders. Frequently the pain was so intense that I was impelled to loose my clothing and walk about the room. My nerves were disordered and impenetrable, and I was, consequently, easily disquieted and upset. My sleep was habitually bad, and I seemed none the better for spending a night in bed. Eating but little my strength waned of necessity, and I came to be very weak. For a long time I got about feebly and with difficulty."

"In August, 1887, I had an attack of rheumatic gout, which gave me the most harrowing experience of my life. The complaint took its usual course and refused to yield to the ordinary treatment. Through the partial failure of the liver and kidneys dropsy set in and my legs and feet became puffed and swollen. I suffered *excruciating pain* and was confined to my bed for *thirteen weeks*. Remedies of every description were tried but to little purpose."

"My brother, visiting me one day, said he had been cured of an attack of dropsy by a medicine called Mother Seigel's Syrup. I got a bottle from Mr. Hewitt, the chemist, in Seven Sisters' Road, and after taking it felt a trifle easier. I continued taking it, and soon the pain and swelling abated. I could eat without pain or inconvenience, and by a few weeks' further use of the Syrup I was not only free from any local ailment, but felt better than I ever did in my life before. Since then I have enjoyed continuous good health, taking a dose of Mother Seigel's Syrup occasionally for some transient indisposition. You are at liberty to publish my letter. (Signed) (Mrs.) Elizabeth Rogers, 42, Plevna Road, South Tottenham, London, September 13th, 1895."

"In January, 1892," writes another, "I had an attack of influenza, and was confined to my bed for *eighteen weeks* thereafter. Subsequently I was very weak, and could get up no strength. What little food I forced down (having no appetite) gave me *excruciating pain* so that I was afraid to eat. I came to be exceedingly weak and had frequent attacks of dizziness. I was worn almost to a skeleton, and none thought I would recover."

"In June, 1892, Mr. Smith, a friend of ours, recommended me to try Mother Seigel's Syrup, which I at once procured of Mr. George Coombs, the chemist in Hucknall. After taking it for only one week I felt greatly benefited. I could eat better, and food agreed with me. Continuing with the Syrup I grew stronger and stronger, and soon felt even better than before I was attacked by the influenza. You are free to print this statement if you wish to do so. (Signed) (Mrs.) Ruth Halliday, 44, High Street, Hucknall Torkard, Nottingham, March 19th, 1895."

Intense pain may or may not indicate urgent danger to life, but it is hard to bear, and very exhausting just the same. In cases of rheumatic gout (Mrs. Rogers) the pain is caused by a poisonous acid in the tissues, originally produced by the decomposition of food in the stomach—indigestion or dyspepsia. The same poison acting on the liver and kidneys creates the other symptoms mentioned. In the case of Mrs. Halliday the ailment was dyspepsia, which in the first place invited influenza, and then remained to torment her.

It is best and easiest to *prevent* pain by using Mother Seigel's Syrup *immediately* when the slightest illness appears.

Sir George Chesney Memorial Committee.

CHAIRMAN :

General Sir Henry W. Norman.

MEMBERS :

The Marquess of Linsdowne, Field Marshal Lord Roberts, Mr. George Allen, Colonel Sir J. Ardagh, Sir Stuart Bayley, Mr. William Bickwood, Sir Edward Braddon, Rev. A. G. Butler, Colonel Sir G. S. Clarke, General Sir E. Colten, Sir Auckland Colvin, Sir Julian Danvers, General C. H. Dickens, Sir Mortimer Durand, General Sir W. Stirling Hamilton, Captain Hext, R. N., Mr. A. P. Howell, Sir W. W. Hunter, Lieut.-Genl. McLeod Innes, General Sir Allen Johnson, Sir H. S. King, M. P., Mr. A. Lawrence, General Sir R. Low, Sir Alfred Lyall, General Sir O. Newmarch, Sir Andrew Scoble, Field Marshal Sir Lintorn Simmons, Field Marshal Sir Donald Stewart, General R. Strachey, General Sir A. Taylor, Mr. Meredith Townsend, Mr. W. C. Unwin, General Sir George White and General Sir E. Williams.

Memorial

TO THE LATE

SIR GEORGE CHESNEY, K.C.B., R.E., M.P.

A Meeting was held, on the 24th April, at the Royal United Service Institution, of some of the friends of the late Sir George Chesney, to consider the question of the commemoration of his distinguished services as Soldier, Administrator, Statesman, and Author. General Sir Henry Norman presided, and was supported by Field Marshals Sir Lintorn Simmons and Sir Donald Stewart, and other friends of Sir George Chesney. To carry out the object of the Meeting, a General Committee was formed, which included the gentlemen then present, and in addition, the Marquess of Linsdowne, Field Marshal Lord Roberts, General Sir George White, Sir Andrew Scoble, Sir Alfred Lyall, Sir H. S. King, Sir W. W. Hunter, Mr. Meredith Townsend, General Richard Strachey, Mr. William Blackwood, and others.

The form the Memorial should take was left to the future consideration of the Committee, as it would depend on the amount subscribed, but the suggestions tended towards a bust of Sir George for the India Office, and a medal for valuable contributions to Military Literature. It was resolved to limit each subscription to a maximum of three guineas.

Subscriptions will be received by Lieutenant-General McLeod Innes, 9, Lexham Gardens, Cromwell Road, London, W.

COMMITTEE FOR INDIA :

Hid. Excy. General Sir George White, V. C., G. C. I. E., K. C. B., the Hon'ble Major-General Sir E. Colten, K. C. I. E., Lieutenant-General Sir W. S. A. Lockhart, K. C. B., K. C. S. I., His Excy. Lieutenant-General Sir C. Mansfield Clarke, K. C. B., Major-General J. Duncan, Major-General G. E. L. S. Sanford, C. B., C. S. I., Major-General G. de C. Morton, C. B., Major-General A. R. Badcock, C. B., C. S. I., Brigadier-General W. G. Nicholson, C. B., Captain J. Hext, C. I. E., R. N., Colonel W. S. S. Bisset, C. I. E., R. E., Colonel T. Deane.

Honorary Secretary :

Colonel T. Deane, Simla.

Subscriptions will be received, in India, by Messrs. King, King & Co., Bombay; Messrs. King, Hamilton & Co., Calcutta; and by the Alliance Bank, Simla, and its branches at Calcutta, Cawnpore, Agra, Ajmere, Dujeeing, Lahore, Murree, Mussoorie, Rawal Pindi and Umballa. Subscriptions are limited to a maximum of Rs. 32 in India.

By order of the Committee,
T. Deane, Col.,
Hony. Secy.

Simla, 18th July, 1896.

LONDON AND BOMBAY,
And all Booksellers.

"An EXAMINATION

Of many different parts of the book shows that it is entirely re-written from cover to cover. Of course much of the old material, representing the stable portion of our word-life, remains; but this old matter has been everywhere remoulded, condensed, and blended with new. How skilfully this has been done could only be shown by parallel quotations for which we have no room. But let any one take, for example, the word *nice*, and compare its treatment in the old edition and in the 'International.' He will find that the eight heads under which the meanings were grouped have been reduced to seven, that these heads have been entirely rearranged so that the list is first and the first last, that the etymology is treated more instructively in half the space, and that the synonyme is reduced, to the great relief of the reader, from seventeen lines to three. This system of condensation has been carried out consistently throughout the work, so that very much more information is given within the same space. Probably no one who has been accustomed to use the old dictionary, and has not compared it with the new, can imagine how large an amount of matter the older work contained which we can dispense with and never miss. * * A scrutiny of the work inclines us to believe that every page of the revised work contains incomparably more information than the corresponding page of the earlier work, and that this information is more scientifically arranged, more perspicuously worded, and far freer from intermixture of irrelevant, erroneous, or trivial matter."

POSTSCRIPT.

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Uckoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Babington Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corfit, K.C.L.E., Director of Public Instruction, Bengal, 25th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine does in his biography of the late Dr. Sushun Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindu Patriot*, in its palmiest days under Kristodas P., enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his life and letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, sport winning, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Hospital Railway, from Ceylon says:—It keeps splendid time and never stopped although it sustained hard knocks and jerks. x Dr. H. Moore of Royal Artillery from Pondicherry says:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dumbum says:—I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—The watch you sent me some seven years ago is still keeping very good time.

Jewelled Ring Rs. 1-9-0. Real

Balaknana, Calcutta.

KAVIRAJ NAGENDRA NATH SEN, Physician, Surgeon, Accoucheur, practises the Ayurvedic system of medicine, after having obtained a diploma at the final examination of one of the Government medical Institutions of the country.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A. HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada.
Scientific American.

SONNETS.

I.

TO OCTOBER.

OF all the months which variegates the year
I love this month the best ; for as aware
That Winter soon will come to strip her bare,
Nature with pensive gait approaches near
The confines of her taskmaster severe,
No longer panting in the Summer air,
Wreathing her face with smiles ; but not less fair,
Tho' deeper shades are darkening round her sphere—
Ah ! would that this sweet month with longer stride
Would take a wider range of fleeting time,
Or that the star which o'er it doth preside
Were fixed forever in ascendance prime,
Then would no meaner cares our hearts divide,
Nor poets sigh for a more genial clime.

II.

England ! thou still art strong ; where'er I look
Watching the aspect of thy lowering sky ;
An earnest speaks in many a kindling eye,
Of hope and power that will not tamely brook
To see thy harvest fall before the hook
Of traitors that unseen in ambush lie
With wolf-like hunger and with jackal cry,
Gathering for murderous ends in shades forsook.
Who fears for England while that heart still beats
Winch quailed not at Napoleon I while a head
Still sways our councils, called from fiction's heats
To noble triumphs ; while Truth's light is shed
From her pure altars ; and while Heaven takes part
With her who reigns in every Briton's heart.

III.

The voice of that eternal ditty sings
Humming of future things.—CLARE.
A voice came to me from the fields of sleep,
A mournful voice, as of a troubled wind
Seeking for something which it could not find,
And always restless. Thus it spoke—"I sweep
On, on forever ; but no purpose reap ;
I coast the skirts of heaven, but still am blind
I see no goal before me or behind,
No barrier meets me in that unknown deep—
Yet am I baffled." Words like these methought
Were uttered to my soul, and it replied—
"Oh, wandering echo of all hearts I be taught
An humbling lesson. Here with me abide,
Till I, like thee, can wander, and the while
We may with song the weary hours beguile."

B. B. FELTERS.

WEEKLYANA.

THE Vicerny returns to Calcutta on Thursday, the 10th December. The arrival will be public. In our advertisement column will be found the Military Secretary's notification on the subject.

THE largest medical library is to be found in Paris. The Surgeon-General's Library of Washington is the second in number. The next is the Library of the College of Physicians and Surgeons in Philadelphia. There is no public library—medical or other—properly speaking, in Calcutta. The Public Library, established to signalize the freeing of the Press from despotic regulations, in honour of the deliverer, Metcalfe, instead of developing, is dwindling into decay and nothingness.

PUCK will put a girdle round about the earth in forty minutes. The present ingenuity of man cannot accomplish the feat, that is, he cannot travel round the world in less than 66 days. Thus : New York to Southampton by steamer, 6 days ; Southampton to Brindisi, *via* Paris, $3\frac{1}{2}$ days ; Brindisi to Yokohama, *via* Suez, Red Sea, &c., 42 days ; Yokohama to San Francisco, sea, 10 days ; and San Francisco to New York, rail, $4\frac{1}{2}$. Prince Heilkoff, Minister of Ways and Transportation of Russia, is, however, prepared to do the same round in much less time, in 33 days, if not in as many minutes. After the completion of the Trans-Siberian Railroad, at the present rates of fast ships and trains, the Prince calculates that the time and course of the travel will be : New York to Bremen, 7 days by steamer ; Bremen to St. Petersburg, $1\frac{1}{2}$ day by rail ; St. Petersburg to Vladivostock (30 miles an hour) by rail, 10 days ; Vladivostock to San Francisco, *via* Hokodate Straits (Japan), by steamer, 10 days ; San Francisco to New York, by rail, $4\frac{1}{2}$ days.

THE collection by the Lord Mayor of London in aid of the distress occasioned by the tidal wave in Japan, amounted to £3,895.

THE rage in the Court of Lisbon is—against the corset. After a special study of medicine in consequence of the obesity of the king, the beautiful Queen Marie Amelie of Portugal denounces the corset as the cause of half the ailments of women. She not only preaches but also practices the doctrine—"Down with the corset." Her words though listened to in silence have not been followed by Portuguese belles. What her words have failed to accomplish, Röntgen's rays have done—by exposing the extraordinary deformities caused by tight lacing.

A CORRESPONDENT of the *Lancet* who assisted at a large bazaar by holding a small Röntgen Ray Gallery, gives his experiences thus :

"No. 1. An elderly gentleman of prosperous appearance, after examining the unique collection and absorbing a brief résumé of x-rayism, objected that the show was not 'up to date,' as he had 'read somewhere in a newspaper that now you can see the liver palpitating and the heart circulating.'"

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPF, VICTORIA CHAMBERS, 19, SOUTHAMPTON BUILDINGS, HOLBORN, LONDON.

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

No. 2. Two elderly ladies entered the small room and, solemnly seating themselves, requested me to close and fasten the door. Upon my complying they said they wished 'to see each other's bones,' but I was 'not to expose them below the waistline,' each wishing to view the apparently dismantled osseous structure of her friend first!

No. 3. A young and anxious mother asked me to see if her little boy had really swallowed a threepenny-bit, as he was uncertain himself. She had read in the papers that a great doctor, Sir Something Blister (fact), in a speech in a large meeting in Liverpool a little while ago, said that a halfpenny had been seen in a boy's 'sarcophagus'!

No. 4. A young girl, of the domestic servant class, taking advantage of her opportunity, as she thought, and my sex, asked me in confidence if I would 'look through her young man unknown to him, while he looked at the pictures, to see if he was quite healthy in his internals.'

No. 5. When showing a photograph of the invisible spectrum and mentioning the fact that the mystic x rays, owing to their enormous vibration frequency, should take their position far above the ultra-violets, whereas in reality they have a place in the prismatic spectrum as if infra-infra red, one dignified dame remarked, 'I don't wonder they call them *infra dig.* rays when they penetrate even one's most intimately protective apparel.'

A REPORT by Sir Ernest Satow from Tokio gives the following information on the foreign trade of Japan during the first half of the current year:—

"Since the war with China, Japan has been pursuing the twofold object of becoming a strong military Power and a great commercial country. With that intent she is making a large, if not a lavish, outlay upon national defence, the development of home manufacturing industries, and the purchase abroad of raw material for their consumption, as well as upon the extension of the railway system and the encouragement of navigation. The foreign trade for the first half of 1896, says Sir Ernest, has been marked by an abnormally large importation of raw and semi-raw material, and Japan has actually paid the outer world for her half-year's purchase no less a sum than 190,868½. Great Britain and her dependencies—British India, Hong Kong, Australia, and Canada—now enjoy the lion's share of the trade of Japan. The growth of imports and the shrinkage of exports, Sir Ernest tells us, have had the effect of reversing the relative positions hitherto of Great Britain and the United States. The share taken by the latter in Japan's foreign trade for the half-year is only one-seventh, while that of Great Britain amounts to nearly one-quarter, and that of the British Empire to over forty-six per cent. of the whole. The most remarkable development is the advance of British Indian imports, which have risen from 12,000,000 dols. for the whole of 1895 to more than 13,000,000 dols. for the first half only of 1896. Sir Ernest Satow anticipates a large demand for railway material, and mentions that one British firm now holds an order for the supply of as many as seventy-two locomotives. Great Britain has a largely predominating share in the supply of steel rails to the Japanese, but Germany holds first place as regards iron rails and wire. But the Japanese are going to develop their own iron resources, and an appropriation of more than 4,000,000 dols. has been passed for the purpose. They have one mine already which produces 16,000 tons of iron annually. The services of two foreign experts are to be engaged, and twelve foreigners are also to be attached as foremen to the national foundry. Japanese experts are now travelling abroad to study methods and purchase plant."

AT Bow Street, before Mr. Lushington, two firemen of the Metropolitan Street station were convicted of behaving in an idle and disorderly manner in Trafalgar Square and bound over in their own recognisances in 5l. to be of good behaviour for one month. Their offence was climbing up Nelson's column. They were walking through Trafalgar Square and finding the ladders in position and the steeplejacks at work,

"Shall we go up?" said one. 'Yes, let's,' said the other. And up they went.

The steeplejacks had just descended, and the path leading to cloud-land was clear. One took the ladder on the east, the other that on the west, and confidently, with the sure step of the expert, they began mounting. By the time they had gained the base their action had attracted a great many people, and a crowd gathered faster and faster in the square as they commenced the perpendicular climb.

'Didn't you get giddy?' asked a reporter, who met them soon after they had left the police court.

'Lor' bless you, no. There was nothing to make you giddy. It was no more difficult than going up a ladder on the side of a house. All you want is confidence, eh, Frank?'

'That's all. Confidence.'

They climbed on to the parapet, and stood by the side of the hero of Trafalgar. This did not satisfy them, for there was a ladder reaching some twelve or fourteen feet from the great man's boots to his cocked hat, and they could not resist the temptation it offered. They ascended, and Maysey proceeded to sit on the Admiral's head. His friend, standing on the ladder, shook hands with him, and with one accord they exclaimed, 'We're up!' The question in the mind of the crowd below was how were they going to get down. Somebody proposed that the steeplejacks should be sent to fetch them. There was no need, however, for this amiable proposition to be carried out, for as skilfully and leisurely as they had gone up, so leisurely and skilfully they came down."

Up in heaven, the two friends inspected the Admiral's quarters and found only "a lump of cement in his hat, and a lump of cement on his sword." They were punished perhaps for their foolhardiness, but for the confidence and courage they exhibited were they not worthy of

praise? Or, was it the indignity offered by them to the great hero that brought on them disgrace?

THE Home Department of the Government of India have published the information:—

"It has been reported to the Board of Health, Constantinople, that the distilling apparatus for the provision of water for the lazaret at Camaran is in operation, and that the quality of its waters is excellent after filtration. The apparatus is capable of affording fifty tons of water in twenty-four hours."

THE District Board of Dacca having appointed Babu Kimini Kumar Soin, a passed B. A. and plucked M. A., as Sub-Inspector of Schools in place of his deceased father, an enquiry was made whether a Mahomedan could not be found for the post, as there is no Musalman Sub-Inspector in the Musalman district. It was found that there were 20 members of the Board present, four of them being Musalmans. No Musalman was proposed and a Musalman seconded the Hindu, who was appointed by an overwhelming majority. Not only there was no Mahomedan candidate but no efforts were made to secure one. The matter has been made the subject of a special report and the Commissioner of the Division concludes it with the words: "The remark made by His Honour the Lieutenant-Governor in his speech at Dacca to the Mahomedan community on 31st July 1896, 'if they want Government to help them, they must help themselves', is well illustrated by the proceedings above described."

AT the last half-yearly meeting of the Bengal Bonded Warehouse Association, only one-third dozen proprietors were present and one of them represented another dozen. There were 6 resolutions proposed and seconded. The Chairman himself proposed two of them. The proxy of the 12, for himself and for one of his principals, took part in four of the resolutions. We believe, it would be within the law, if one proprietor, representing all others, held the meeting, presided at it, proposed, seconded and carried all the resolutions and declared a dividend.

THE subjects fixed by the Reception Committee for discussion at the next Congress to be held in this city, are:—

- (1) Congratulations to Her Majesty on having completed the sixtieth year of her reign.
- (2) Constitution of the Congress.
- (3) Scarcity throughout India, and the necessity of restoring the Famine Insurance Fund to its original position.
- (4) Re-adjustment of provincial contracts and better terms to the various Provinces.
- (5) Poverty.
- (6) Separation of Judicial and Executive functions.
- (7) Simultaneous Examinations.
- (8) University reform.
- (9) Reorganisation of Education service which virtually excludes natives of India from the higher grades of the Education Service.
- (10) Legislative Councils, constitution, and rules. Interpellation and the right of dividing the Council on any question arising out of the Budget.
- (11) The Jury question.
- (12) The Medical Service.
- (13) Indians in South Africa.
- (14) Omnibus.

The formal resolutions at the close.

The Congress *pandal* is being erected in Beadon Square. Whatever the reasons that might have driven the Committee to the questionable quarter, the construction is a vandalism which should not have been allowed. We wonder how the Calcutta Corporation could agree to the spoliation of the Square. The rebuke administered by Sir Alexander Mackenzie to the Municipal Commissioners at the laying of the foundation stone of the new drainage works at Palmer's Bridge, Entally, seems not to have been unmerited.

KAVIRAJ N. N. Sen's present, the Ayurvedic Pharmacy sheet almanac for 1897, is welcome. With the pictorial representations of youth and age, it vividly reminds us that we are about to close one year and to begin a new.

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noses in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aurat Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

NOTES & LEADERETTES,
OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH
OCCASIONAL COMMENTS.

A SEMI-OFFICIAL Note issued in Paris states that M. Cambon, jointly with the other Ambassadors at Constantinople, continues to press vigorously for the fulfilment of the Sultan's promises. A European Commission is about to start for Crete to reorganize the gendarmerie. The Porte has instructed the Commander in Crete to co-operate loyally with the Governor.

DURING the debate in the French Chamber on the Foreign Estimates, M. Hanotaux was asked to define the relations existing with Russia. In reply, he declared that it was not expedient to supplement the precise statements that had been made by the Tsar and President Faure, regarding the entente, the existence of which was undeniable. Referring to Egypt, he said France had abandoned none of her claims in that quarter. France was not now alone, but was supported by a friendly nation.

Russia has rejected the proposal made by France to establish an international control over the Turkish finance similar to the Egyptian system. An inspired article in the *Viedomosti* says that Russia's policy is to reduce Turkey to a complete dependence. The *Neue Freie Press* states that Russia is opposed to an international control over the Turkish finances because she does not wish Great Britain to co-operate at a moment when the reopening of the Egyptian question is perhaps imminent.

The *Times* Vienna correspondent says that the Powers forming the Triple Alliance were never less disposed than at present to raise the Egyptian question.

FIFTEEN Mahomedans belonging to the Naval College at Constantinople have been arrested for being implicated in the Young Turkey agitation.

THE Bismarckian organ, *Hamburger Nachrichten*, still continues its Anglophobe campaign, and says that England wishes to England (*sic*) universal war, and does everything to cause an open conflict between the Mahomedan and Christian Worlds through the Armenian conflagration at Constantinople.

THE Egyptian Budget for 1897 shows a surplus of only £5,000, as it has been decided henceforth to exclude sums going to the general reserve fund and the conversion economies fund, since Government is not free to dispose of these funds.

Government believes that it will be able to meet the annual expenses of Dongola Province without disturbing the financial equilibrium. The Army is to be increased by four battalions of Infantry, two Squadrons of Cavalry, and a battery of Artillery, Dongola Province bearing the cost.

THE *Times* Rome correspondent states that Italy has decided not to preserve Erythra as a military colony, but the form of government will not be settled until the country has expressed an opinion thereon, and no plan will be adopted before consulting England. Massowah and Kussala, if evacuated, will be restored to Egypt. An agitation has commenced throughout Italy in favour of a total and speedy evacuation of Erythra.

THE West Indian Colonies have made urgent representations to Government regarding the critical position of the sugar industry. Government is considering the appointment of a Commission of Enquiry into the matter. Mauritius has joined the representations.

EIGHT THOUSAND Hamburg dock labourers have struck work. This is evidently an attempt to effect an international strike, for which an agitation has been carried on for some time. The strike has extended to Bremen. The Seamen's Union of London has resolved not to discharge Hamburg vessels.

THE Lord Mayor of London intimates that he will open a National Relief Fund for the Indian famine the moment the Indian authorities apprise him of the necessity for such a step.

CAPTAIN Morjan, an officer in the German Army, is going to the Soudan in a private capacity to study the Dongola campaign. He had an audience on Nov. 23 of the Emperor, who sent his greetings to Sir Herbert Kitchener.

IT is expected that there will be an extra Session of Congress after Mr. McKinley is installed to consider the question of increase in the American tariff.

A NUMBER of Korean officers have been arrested for plotting to seize the King and force him to return to the Palace. Three Russian officers and eighty seamen with a field gun have entered Seoul.

JAPAN is sending a warship to the Philippines owing to disturbing news from that quarter. It is reported that the rebels have won a battle, and an attack on Manila is feared. The British Consul at Manila and the Government of Hongkong are constantly exchanging telegrams respecting the state of affairs at the Philippines. Her Majesty's ship *Pique* has been ordered to join the *Daphne* at Manila.

THE *Pall Mall Gazette* states that Government intends to increase the war estimates by several millions, to complete the re-arming of Artillery, to form several new battalions, and reorganize transport.

DR. Jameson is unable to sleep without narcotics and is suffering severe pain.

GREAT activity prevailed in Arctic exploration during the first half of the century. In 1818 Sir John Ross explored Baffin Bay, and Buchan endeavoured to penetrate to the north of Spitzbergen. In 1819-25 Parry explored Lancaster Sound and the islands to which it gives access, including Melville Peninsula, and also tried to pass through Hudson's Bay. In 1823 Clavering reached the east coast of Greenland in 76° N. latitude. In 1827 Parry reached 82°43' N. latitude to the north of Spitzbergen. In 1829-32 James Ross was on the Boothia Peninsula, and discovered the Magnetic Pole. On the main land in 1819-23, Franklin, Richardson and Back were exploring the coast from the Coppermine River. In 1833 Back was similarly engaged. In 1837-39 Dease and Simpson and, ten years later, Rae, contributed to the knowledge of this coast and of the opposite islands. To Rae is also due the geography of the region round Repulse Bay. In 1845 Franklin's ill-fated expedition in the *Erebus* and *Terror* sailed to find out the North-West Passage, and was lost on the South of King William's Island. For ten years, many expeditions were sent out to discover traces of Franklin, they found not only the fate of Franklin and his men, but many new coasts and new islands to the north of America. One of these expeditions under McClure actually completed the North-West Passage. In 1853-55 and 1860-61, Kane and Hayes pushed northward in the Smith Sound direction, and in 1871 Hall succeeded in reaching 82°16'. In 1857, the Swedes began to send scientific expeditions to Spitzbergen; these were continued for years, latterly under the direction of Baron Nordenskjöld, and have added greatly to our knowledge of Spitzbergen and of the seas and islands around. In 1875-76 the baron penetrated through the Kara Sea to the Yensie, and in 1878-79 he succeeded in sailing along the north coast of Asia and Europe and so accomplishing the North-East Passage. In 1869-70 Koldewey wintered on the east coast of Greenland, and reached 77° N. lat. In 1872-74 Payer and Weyprecht, sailing to the north-east of Novaia Zemlia, discovered Franz Josef Land, since further explored by Leigh Smith. Under Nares, the *Alert* and the *Discovery* were sent out by Smith Sound by the British Government in 1875. He wintered in Lady Franklin Bay 82°27' N., explored the north coasts of Greenland and Grinnell Land, while Captain Markham succeeded in pushing as far north as 83°20'26". Since then Greeley (1881-85), in command of a United States expedition, wintered in Lady Franklin's Bay, explored the interior of Grinnell Land and the north coast of Greenland, one party reaching a mile or two beyond Markham's. In Greenland itself, Nordenskjöld, in 1883, succeeded in penetrating about 150 miles across the

travelling to the South of Disco. A year or two later, Peary went inland for about 100 miles, while, in 1888, Nansen crossed from the east to the west coast in the Southern part of Greenland. Early in the century Lütke explored Novaia Zemlin, and in more recent years English and Russian expeditions have added to our knowledge of these islands. In 1805 Sannikof discovered the New Siberian and other islands. In 1820-25 Wrangell explored the north coast of Asia and Kamchatka. In 1877 Finsch and Brehm led an expedition from the Chinese border across Siberia to the Kara Sea. A recent expedition under Bunge and Toll, stationed at the mouth of the Lena for several years, made valuable contributions to the geography of the coast, and especially the New Siberian Islands. In his second venture, Nansen, on April 7, 1895, found himself in the highest latitude yet reached—86°14' north, distant 261-5/6 miles from the Pole.

No rain having fallen during what are known as the Hatiya and Siwati asterisms, that is, from the 25th September to the 10th October and from the 22nd October to the 5th November, the Bengal Government made, on November 18, its report, in conformity with section 9 of the Famine Code, giving the earliest intimation of possible distress in Bengal generally and in Bihar in particular. From the papers circulated by the Bengal Government, we make the following analysis of rainfall and price of food grains in the Bengal districts:

BURDWAN.—Normal Rainfall 54.36 inches, in 1896, 43.90 inches; common rice 15 seers per rupee, prospect of winter rice 9 annas; in famine of 1874 relief was given.

BIRBHUM.—R. 56.50, 1896, 40.73; rice 15, prospect 9½; famine in 1874, relief opened.

BANKURA.—R. 56.14, 1896-45.02; rice 14½, p. 9; famine 1874, relief.

MIDNAPORE.—R. 60.33, 1896-55.32; rice 14, p. 8; famine 1874.

HOOGHLY.—R. 57.25, 1896-49.86; rice 13, p. 8; famine 1874, relief.

24-PARGANAS.—R. 62.02, 1896-54.48; rice 14, p. 9½; famine 1874.

NADIA.—R. 56.83, 1896-40.65; rice 16, p. 2½; famine 1874, relief.

MURSHIDABAD.—R. 53.97, 1896-23.50; rice 14, p. 7; f. 1874, relief.

JESSORE.—R. 59.20, 1896-55.31; rice 20, p. 1½

KHULNA.—R. 74.85, 1896-48.65; rice 17, p. 10.

RAJSHAHI.—R. 56.02, 1896-31.07; rice 18, p. 6; famine 1874, relief.

DINAJPUR.—R. 62.73, 1896-44.17; rice 14½, p. 10; f. 1873-74, relief.

JALPAIGURI.—R. 122.06, 1896-54.74; rice 16, p. 7½; f. 1874, relief.

DARJEELING.—R. 137.19, 1896-103.19; rice 9, p. 8; f. 1873-74, relief.

RANGPUR.—R. 82.56, 1896-74.66; rice 12, p. 10; famine 1874, relief.

BOGRA.—R. 64.55, 1896-53.17; rice 15, p. 12; famine 1874, relief; scarcity 1888.

PABNA.—R. 61.30, 1896-42.81; rice 15, p. 5; famine 1874, relief.

DACCA.—R. 72.23, 1896-57.08; rice 15, p. 7½

MYMENSING.—R. 86.08, 1896-50.29; rice 17, p. 7.

FARIDPUR.—R. 65.45, 1896-45.42; rice 20, p. 8.

BACKERGUNGE.—R. 82.36, 1896-60.81; rice 15, p. 10.

TIPPERA.—R. 76.91, 1896-10.65; rice 20, p. 10.

NOAKHALI.—R. 115.13, 1896-87.23; rice 18, p. 8.

CHITTAGONG.—R. 111.50, 1896-73.19; rice 22, p. 11.

PATNA.—R. 52.86, 1896-30.70; rice 13, p. 10.

GAYA.—R. 43.20, 1896-33.89, rice 12, p. 8; famine 1873-74, 1888-89, relief; scarcity 1891-92.

SHAHABAD.—R. 41.91, 1896-29.47; rice 12, p. 4; famine 1873-74, relief; scarcity 1888-89, 1891-92.

SARAN.—R. 40.56, 1896-22.32; rice 12, p. 1; famine 1873-74, relief; scarcity, 1889 and 1892.

CHAMPARAN.—R. 49.55, 1896-27.94; rice 15, p. 3; famine 1873-74, 1888-89, relief; scarcity 1891-92.

MUZAFFARPUR.—R. 46.15, 1896-34.26; rice 16, p. 3; famine 1873-74, 1875-76, 1888-89, 1891-92, relief.

DARBHANGA.—R. 47.37, 1896-37.94; rice 12, p. 5; famine 1873-74, 1875-76, 1888-89, relief.

MONGHYR.—R. 45.30, 1896-41.73; rice 13½, p. 8; famine 1873-74, 1892, relief; scarcity 1888-89.

BHAGALPUR.—R. 48.91, 1896-37.53; rice 13, p. 8½; famine 1873-74, 1889, 1892, relief.

PURNEA.—R. 63.95, 1896-37.12; rice 11, p. 8; famine 1873-74, 1892, relief; scarcity 1889.

MALDA.—R. 53.42, 1896-43.88; rice 10, p. 4; famine 1873-74, relief.

SONTHAL PARGANAS.—R. 52.35, 1896-16.70; rice 12, p. 8; famine 1874, relief; scarcity 1889.

CUTTUCK.—R. 59.77, 1896-58.16; rice 36, p. 7.

BALASORE.—R. 60.02, 1896-61.66; rice 24, p. 6; scarcity 1889.

PURI.—R. 58.91, 1896-48.02; rice 33, p. 9; scarcity 1888-89.

HAZARIBAGH.—R. 52.91, 1896-50.35; rice 13, p. 7; famine 1874, relief.

LOHARDAGA.—R. 62.41, 1896-43.98; rice 15, p. 8; scarcity 1873-74.

PALAMAU.—R. 49.31, 1896-32.71; rice, 7, p. 6; famine 1874, relief; scarcity 1889.

MANBHUM.—R. 53.37, 1896-38.71; rice 11, p. 6; famine 1874, relief.

SINGHBHUM.—R. 53.98, 1896-63.32; rice 12; famine 1874, relief.

FROM these figures, it will be seen that great distress prevails, and perhaps will grow in certain districts of Behar, in Shahabad, Saran, Champaran, Muzaffarpur and Darbhanga.

The prospect of winter rice is bad in Nadia, Jessore, Rajshahi, Pabna and Malda.

In Orissa, the winter rice is hopeful, though Balasore is suffering from the effects of the late inundation and extra normal rainfall.

The districts of heavy rainfall are Jalpaiguri, Darjeeling, Noakhali and Chittagong; of medium rainfall are Burdwan, Birbhum, Bankura, Midnapur, Hooghly, the 24-Parganas, Nadia, Murshidabad, Jessore, Khulna, Rajshahi, Dinajpur, Rangpur, Bogra, Pabna, Dacca, Mymensing, Faridpur, Backergunge, Tippera, Patna, Purnea, Malda, the Sonthal Parganas, Cuttuck, Balasore, Puri, Hazaribagh, Lohardaga, Manbhum and Singbhum; of least rainfall are Gaya, Shahabad, Saran, Champaran, Muzaffarpur, Darbhanga, Monghyr, Bhagalpur and Palamau.

Monsoon generally prevails over the whole of Bengal and Orissa excepting portions of Bihar where the sea breeze cannot reach.

IT is to be remarked that the *aus* rice crop is of greater consumption than the *aman* crop in Nadia, and this, perhaps, is a singular instance. The outturn of the former has been calculated at 8 annas, and of the latter at 2½ annas. Believing it to be an incorrect estimate, a special report has been called for.

The famine of 1874 was felt in almost all the districts of Bengal and Behar, excepting Jessore, Khulna, Dacca, Mymensing, Dacca, Faridpur, Backerganj, Tippera and Patna. In Behar, there were famines and scarcities in 1889 and 1892 and, excepting Patna, none of the districts escaped. In Orissa, the Balasore and Puri districts suffered from scarcity, but Cuttuck escaped. There has been no famine in that division after 1866, when the Governor danced when people died of hunger.

SINCE then, a better system to meet famine has been adopted, and we have now a regular famine code. The first indication of failure of harvest or scarcity is being regularly published and circulated. Preparations are making for relief measures.

Mr. J. A. Bourdillon, Commissioner of the Patna Division, writes: "After full consideration I have decided that the time has come for declaring scarcity to be prevalent and for submitting this report, because although there are so far no signs of distress among the mass of the population, yet grain is already at famine prices almost everywhere, and it follows that all those who have to purchase grain for their daily consumption must already be greatly straitened."

Mr. R. C. Dutt, Commissioner of the Orissa Division, says:—"The Collector believes there are still considerable stocks of rice in the district (Cuttack) though the exportation since the last cold season has been continuous and almost phenomenal. But the mahajans and big zemindars are now chary in parting with it, and hence there is difficulty sometimes in getting rice in the market and the prices are high."

Mr. Dutt complains of the high rates of irrigation in comparison with that levied for the Eden Canal of Burdwan.

Mr. M. Finucane, Secretary to the Government of Bengal, instructs the Commissioner of the Patna Division thus:—"You will observe that a sum of Rs. 34,000 is now available in the hands of the Bengal Distress Relief Committee which was formed in Calcutta in 1888, and His Honour proposes after consulting you at Sonapore, to ask the committee to place at your disposal so much of the amount as may be required at present and in the immediate future for distribution in charitable relief."

THE following letter dated the 19th November from our correspondent in the Balasore district, was received too late for the last number :

"The rayyets are reaping their winter harvests, but the price of rice is still stationary. There is no tendency to any fall. Owing to a rumour, originating with traders in the article, that the import of salt has been prohibited, its price has gone up to 4 annas a seer. Salt would formerly be prepared on the coasts of Orissa and people would get it at 1 anna per seer. You may conceive the inconvenience they are put to now for such an exorbitant price at this time of difficulty.

In order to find work, starving people are setting fire to the dwellings of their rich neighbours to find themselves employed in the reconstruction of the burnt houses. Both the District Magistrate and the Sub-Divisional Officer of Bhuddruck are on tour. At present they are inspecting the places suffering most from want of rain and are expected to come to Basdehpur in a week.

On the 22nd November, he writes :—

"On Friday last, Mr. Thompson, the Assistant Settlement Officer, was at Ancoora and inspected the local office at Erom. The manager of the Mullicks' estate representing to him the sad condition of the rayyets, Mr. Thompson promised to report the matter to the higher authority. It is expected the settlement operations will be abandoned for the present. The condition of the rayyets is becoming worse daily. Reports from Verah are distressing. Cholera has appeared, though not in a virulent form.

In your editorial of the 7th November, you wrote 'According to the evidence of one of the experts recently examined in a sensational defamation case, the elephant-headed son of Siva and Durga is nowhere worshipped by the people of this country.' I am sorry for the expert. If he will visit the Orissa Division from Balasore to Puri, on the fourth day of the light half of the month of Sravan (July-August) he will surely alter his opinion. The *puja* of Ganesha is celebrated more pompously than the Durga Puja in Bengal."

Our Monghyr correspondent, writing from Jamalpore on the 25th November, reports that ordinary rice is selling there at 8 seers a rupee and superior quality at $7\frac{1}{2}$; wheat 8; *bhuta* (local crop) 10 to 12 seers; castor oil at $2\frac{1}{2}$ and mustard oil at $2\frac{1}{2}$ seers.

A knowing correspondent in Behar writes under date the 27th November: "The recent rain has done much good to the *rabi* crop but it is doubtful whether it can avert the scarcity. This scarcity may prove serious and it is difficult to form any correct idea about its extent."

A letter from the Burdwan district says :—

"The paddy crop will be here average. The cultivators are comparatively better off than the middle classes who want money to buy food-grains at famine rates. By the end of the cold weather the water difficulty will begin to be felt. The tanks will, I am afraid, dry up soon."

From Allahabad the report is :—

"Up to this time (Nov. 26) Government are doubtful whether the famine has actually begun, so they have not yet started extensive relief works, though prepared to do so at any moment. The N.-W. P. Government have suspended $\frac{1}{2}$ of the land revenue for *kharif* and postponed the introduction of the new settlement assessment, and are giving advances to Taluqdars to open minor relief works in their Taluqs, without interest and half of the amount only being payable. The Government have also raised the pay of servants drawing Rs. 10 and less by one rupee and are helping organized associations for aid of Pardanashin ladies with grants, and have publicly declared they will not allow a single soul to die of starvation.

The associations and public bodies in the N.-W. P. were very pressing in their prayer that Government should open grain shops and sell grain at cheaper rates than the market, but it has not been accepted, for that will, it is said, hamper free trade.

I hear from persons lately arrived here that there has been rain in different parts, but as the price of grain has not yet gone down to any extent, the rain seems to have been nominal. In Guzerat however I see there has been 3 or 4 inches of rain in some places. As regards Allahabad, there were heavy clouds for several days, but save a little drizzling there was no rain."

THERE was to have been a meeting of the Medical Board at 11 in the forenoon of Thursday. The same morning, at 8, Surgeon-Captain S. C. Robson-Scott, the Deputy Sanitary Commissioner of Bengal and Secretary to the Medical Board, was found lying dead in a pool of blood in his bath-room at the United Service Club, with a punctured wound on the right side of the neck and a lancet lying alongside. It was not deemed necessary to hold any post mortem examination.

On the assurance of Surgeon-Colonel Ross that the deceased had committed suicide by severing the right carotid artery and production of a letter of the deceased stating that he was very much worried and going mad, and on the evidence of Surgeon-Captain H. J. Dyson who deposed that he saw the deceased on Thursday morning and was told by him that he was very much worried, the Coroner made no further enquiry as to the cause of suicide. The verdict of the jury was of course temporary insanity. The deceased was a bachelor and had recently returned from home. It was remarked that he was morose and absent-minded for about a week before self-destruction. The mystery is further mystified by the complete ignoring by the Anglo-Indian morning papers of the bloody business. They do not publish it even as a piece of news. It is rarely that a medical man takes his own life. That a high-class club should be the scene of the act is perhaps another cause of this significant silence. Or, are we to suppose that the deceased had no near friends who could take care of him or distant friends and dear ones to be informed of his sad end?

DR. Mahendralal Sircar, who fell ill while investigating the case of "veritable" bubonic plague in Raja Rajbullub's Street, is still confined to bed. Before he could complete his thorough report, he was struck down and has not been able to acquaint his colleagues on the Medical Board with the results of his independent investigations. It is to be hoped that the Board will not come to any hasty conclusion, and Dr. Sircar will be able to send in his report by Monday when the Board meets again.

AT one time it was believed that Mr. H. J. S. Cotton would have to retire from the Bengal Secretariat without further advancement. The tide has, however, turned in his favour. He was promoted to the Home Secretaryship and is now Gazetted Chief Commissioner of Assam. His brethren of the service gave him a dinner at which the Lieutenant-Governor of Bengal presided, and his native friends and admirers feted him as no Chief Commissioner elect was honoured before him. The Indians who organised the Evening Party at the Dalhousie Institute on Monday week in the name of the public, given, as the *Pioneer's* Calcutta correspondent says, by Maharaja Govind Lall Ray, of Rungpore, who owes his high position in the new Indian peerage to Mr. Cotton, and by Raja Binayakrishna, late of Raja Nabokissen's Street now of Grey Street, who is always for worshipping the rising sun, was enjoyed by not only the guest of the evening but also by the invited native gentlemen and the public generally. The chief attractions were the X-ray show, the fireworks and the wines. Mr. Cotton is, indeed, very fortunate, and the home-players have played their part capitally. They honoured him in the belief that he will be the next Lieutenant Governor of Bengal.

THE sensation of the week is the commencement of the Drainage Extension Works of this city, or rather the reply of the Lieutenant Governor to the address asking him to lay the foundation stone. Sir Alexander Mackenzie took the opportunity to read the Commissioners a lesson which was far from palatable to them and which may lead to grave results. During the delivery of the diatribe, and it was nothing else, a Commissioner was seen collecting opinions of such of his brother Commissioners as chose to attend regarding the action to be taken on the Governor's rebuke. We reproduce his speech in full :—

"Mr. Chairman and Gentlemen,—I had pleasure in complying with your request to lay this stone not only because of the importance of the work of which it is the commencement, but in recognition of the position which the Commissioners occupy as the local representatives of the Provincial and Imperial capital. You have in the address that has been presented given a brief history of the inception, objects and development of this project, and of its connection with the general scheme of Calcutta drainage. That subject was at one time very familiar to me, and there are in the Bengal Office, if I mistake not, lengthy notes of mine, written years ago, dealing, as Secretary to Government, with not a few phases of the question. It has always been surrounded with difficulties, and the complexity of the problems involved has certainly not diminished with time. I hope, however, you are now fairly on the way to a solution of the most pressing of these. I have elsewhere sought to vindicate the Commissioners from the charge of having dealt inadequately and perfunctorily with this drainage question. There has been delay, no doubt, in prosecuting these extensions of the system, but the delays have not, as was thought, been inordinate, and the wisdom of caution in undertaking such costly and gigantic operations is vindicated by a comparison between the original estimates and those of the scheme as now sanctioned. The Municipality has, I am afraid, many shortcomings to answer for. But I must say this, that I have never been able to agree that it has shown niggardliness or been backward in sanctioning money for either water-supply or drainage.

You have, gentlemen no doubt been hampered in the task of im-

proving Calcutta by many things, and perhaps by nothing so much as by your own constitution. The marvel is that with such an impracticable organization so much good work should have been done. You have a constitution borrowed *en bloc* from the most advanced models in England, and without any reference to the utterly different circumstances of an Oriental city, and a very mixed community. It seems to have been supposed that because Birmingham for instance (which I know well) is admirably managed by an elected Council of 72, Calcutta could be equally well managed by a Council of 75, of whom 60 are elected. But in Birmingham, to begin with, the population is homogeneous, and accustomed for generations to manage its own affairs on lines as to which all parties are agreed. The Council there is composed entirely of shrewd, capable men of business—manufacturers, merchants, tradesmen and the like—whose one object is to treat every question before them, not as an opportunity for speech-making, but as a matter to be settled as promptly as may be in the most practical way. They work, no doubt, as you do, through Committees, but the endeavour is to place on each Committee only the men who know most of the particular subject entrusted to it, and to have in the Chair of each Committee a man who has for years been administering that special branch. This done, the Town Council does not waste its time in doing over again the work of its Committees. It criticises when necessary, and can on occasions condemn, but its general object is to strengthen and support the executive and to have the work of the Town done, and not merely talked about. There is (according to the November number of the *Century Magazine*) only one lawyer and one newspaper man on the whole Council. Now I think everybody in Calcutta outside the Corporation, and a good many people inside it, will admit that there is here far too much speaking for the sake of speech, that your executive is not nearly strong enough for action, and is far too readily upset and interfered with; that work is often done twice or thrice over, and is often spoilt by the multitude of counsellors or cooks, and that far too much deference is paid at times to the wishes and objections of special interests. This is inevitable, I fear, in a Corporation constituted as yours is having many members whose individual stake in the town is small, who are not all practical men of business, and who represent themselves in the first place and a variety of heterogeneous interests in the second. But if you are wise, you will seriously set yourselves to reduce the evil of desultory discussion to a minimum. I know that much of this is due to the laudable feeling that each Commissioner is individually responsible for the good working of the whole but this interest can often be as well shown by a silent, sensible vote as by a long speech or an acrimonious debate. You cannot all be experts even in such simple subjects as bacteriology and quantitative analysis. It is to be regretted that Calcutta was too proud to borrow its constitution from Bombay, which to my mind has an admirable system combining all that is required of popular representation with a strong executive. But do try to make the best of the system you have, and trust the actual work of the town more fully to your executive officers and to those members of your body who have most experience of its needs.

You must indeed understand, gentlemen, that the Municipality stands at present, or will certainly very shortly stand, at the bar of public opinion in the matter of its general conservancy. Many of you have, I see, made up your minds that, nowever Bombay may suffer, no plague shall come nigh your dwellings. You want now to crucify those who originally startled you, and as for your Health Officer, crucifixion itself is not good enough for him. He is to be immolated by a Special Committee. Now gentlemen, it is an old saying that it is best not to shout till you are out of the wood and safe from all the dangers of the jungle. I hope with you that the plague may not invade us, and the town is certainly at present as regards its human population quite remarkably healthy, even though dead rats have been found in some of the drains; but I must tell you frankly that the marvel is that we are ever without plague and every other disease that comes from neglected filth. I hold in my hand the report of the five Sanitary Commissioners deputed by the Special Medical Board to examine and report upon the state of Calcutta conservancy, and a more appalling document it was never my misfortune to peruse. I positively dare not read out to this assembly its revelations of the abominations in which this city abounds. It will be for the Medical Board to say, in the first instance, where the responsibility lies for this, and to indicate what form, in their opinion, the remedies should take. But it is clear to me that the excessive tenderness which the Commissioners have hitherto shown in dealing with the so-called rights of private ownership will have to be given up. Private owners cannot be permitted to maintain death-traps, cholera and plague nurseries for the destruction of their fellow citizens. The city must have Building Regulations of the most stringent description for preventing the creation of such dreadful places as the Sanitary Officers have discovered. I believe, as a matter of fact, you could do nearly all that is wanted for the future under your existing law, but that law is not put into operation. Private interests, as I have hinted, are too strongly defended to the detriment of the public weal. The operation of the law must henceforth be practically automatic and beyond the influence of party or personal votes. But the chief problem is how to clear out the pestilential quarters that already exist. Something may be done, as I have said, by insisting on private improvements, but many of these places are too bad for any improvement. They cannot be mended and must be ended. The only remedy is to drive broad roads through these quarters, and to replace these horrid pigsties (where, indeed, in normally constituted pig could live) by respectable, well-sanitated dwellings. This operation properly conducted ought not to involve the town in much permanent expense; but whatever it costs it must be done if Calcutta is to cease to be a disgrace to the Empire and the nineteenth century. The Government must, for its own credit and for the sake of the commerce of Bengal, see that these reforms are carried out. I have already invited the Commissioners to concur in the appointment of a Commission to consider this question of Building Regulations. I trust shortly to hear that they are prepared to work with me in the matter. I shall then have to consider the disagreeable alternative of pro-

ceeding without them and in supersession of their authority. You must also, to raise the necessary funds, make the most of your existing sources of income. Your Warrant Department, in spite of all special pleading, is a standing scandal. I believe that your Loan Department would be all the better for a thorough overhauling. And when all this is done if more money is required you must consider the question of special cesses on specially bad areas and specially neglectful owners, and such other measures of raising revenue as may suggest themselves to you. You will receive all the support and assistance that I and the Bengal Council can afford you.

Gentlemen, I am well aware that you have spent much on the conservancy of Calcutta, and I believe that the state of those streets and lanes which can be easily reached by your sweepers and carts is by no means bad. But these sanitary reports show that there is behind these streets and lanes a festering area that it is at present almost impossible for your agency to scavenge effectually, and that must be opened up. I believe the description given of this area will take many of you by surprise. Whether it ought not to have been discovered and attacked before is a question for discussion. That it must be effectively dealt with now is what I am trying to impress upon you. Then the basic question must in future be disposed of and not played with. The condition of the cow-sheds and ticcagiri stables is another grave blot on the town and a standing peril to the population. I believe you could not do better than remove all the cow-sheds outside the urban area, as the Sanitary Commissioners suggest. With most of the evils depicted by the Sanitary Commissioners your existing Act gives ample power to deal. I trust that when once the requirements of the case are laid before you, you will, with a minimum of discussion and controversy, set yourselves to remedy those evils and earn for yourselves a reputation for business-like courage and capacity in dealing with what is undoubtedly a very difficult situation. That the Commissioners can rise to the height of great enterprise has been shown by their treatment of the water-supply and drainage questions. I am not without hope that, when they find what is before them in this matter of conservancy, they will sink all differences of opinion and unite to initiate and carry through a scheme of general reform worthy of the first city in India and of their own responsibilities.

Some one has said that Councils are on ordinary occasions more courageous than most individuals because they can bear odium better. I trust that the Calcutta Corporation will show its courage in accepting any burden of unmerited odium that may come from doing its duty, and defeat the odium that some seek to attach to it as a sample of the failure of Local Self-Government in India. You would (I repeat again as a friend what I have already suggested as Lieutenant-Governor) do well to improve your methods of working. 'There be,' says Bacon, 'three parts of business—the preparation; the debate or examination; and the perfection; whereof, if you look for despatch, let the middle only be the work of many, and the first and last the work of few.' Give your executive full powers in 'preparation' and 'perfection' *i.e.*, in the preparation of projects and the carrying of them out. And, 'the surest way to make agents do their duty' (says Phelps) 'is to show them that their efforts are appreciated with nicety. In your daily dealings with them, you should beware of making slight or haphazard criticisms on any of their proceedings. Your inclination should be to treat them with hearty confidence.' In that way only will you get satisfactory work done; and the state of Calcutta is such that unless the Government, the Corporation and the Executive of the town all work together heartily and with a single mind, there must come a general cataclysm in your municipal affairs, and radical changes such as I, last of all men, desire to bring about.

I thank you, gentlemen, for the patience with which you have listened to me, for your address, and the handsome mementoes of the occasion which I shall carry away with me."

REIS & RAYYET.

Saturday, November 28, 1896.

FAREWELL ENTERTAINMENTS TO OFFICIALS AND TITLE-BROKERS.

THE desire for giving farewell parties to officials has fairly developed into a mania that is spreading fast like an epidemic disease. Particulars of such *fêtes* are reported almost every week from one station or another. European officials—high or low—are not the only recipients of such honours. Native officials too have a fair share. The occasions are either a transfer from a district or a province or retirement from the service for good. The plea urged is that the people should express appreciation of individual officers that have merited it by successful administration. On principle, such recognition of the value of a public servant by the public or any section of it, may not be objectionable, if the value be real instead of being purely imaginary. But such demonstrations indiscriminately made lose their effect and demoralize the officials generally. Our people, always prepared to overdo a thing, have reduced their public appreciation of public men to absurdity. There are Government orders on the subject which

are repeated from time to time to prevent scandals. Explanations are occasionally called for from the officers honoured. There is a lull for a time, but it is like the calm before a storm. The party-managers, among whom the principal offenders are some native officials who hope to advance their own interests and extend their influence by such activity, always find means to evade the standing orders of Government. Recently, it was explained that the farewell parties taken exception to were not the outcome of public subscription but of private friendship. To keep clear of the rules, one man, generally a subordinate official or a private individual basking in the sunlight of favour, opens the demonstration as a friendly movement and others follow from a fear that their inaction would be resented. In this way, pressure is brought upon the rich who are eventually compelled to submit to a demand on their purse which has all the force of a Tudor benevolence.

Such is the degeneracy of the day that it is not possible for even a Sub-Judge, an Assistant-Surgeon, a Police Superintendent, or a Deputy Magistrate to leave a district without being entertained with some sort of publicity. The practice of honouring has become so disreputable that, even when a movement is spontaneous, suspicions arise of low and selfish motives or of undue influences being at the bottom. Entertainments by acknowledged leaders of a community stand on quite a different footing, because they may have a representative character and may not have an official origin. There have been occasions when the expenses paid by one rich zemindar under obligation to the retiring magnate, were unblushingly represented as contributed by the public in general in aid of a public movement. It is not a safe and pleasant task for Government officers to collect subscriptions from reises for such purposes. If they wish to do a thing let them do it independently and openly. Native officers in charge of such entertainments have been known to put off payment of bills and not to settle them till a long time after, on the intercession of friends, to avoid a scandal. It is sometimes openly hinted that such entertainments have opened up a new business or source of income, if not of living.

Under these circumstances, we think European officials should always discourage the business when it relates to themselves as well as to their native subordinates. Many of the latter appear to be very

anxious to see their names in the columns of newspapers in such connection.

Officers that deserve such honour are welcome to it. It is the best testimony of the people's love and respect. Nothing should be done to impair the value of such testimony. It should always be genuine.

We have several times criticised rather sharply the action of Government for the indiscriminate bestowal of titles on native gentlemen. Some of our contemporaries also have dealt with the matter in their own way. There cannot be two opinions that the manner in which titles are being showered every half year, that is, on New Year's Day and the Queen's Birthday, and the means usually adopted for obtaining them, are greatly demoralizing our rich people and a certain class of native officials. We have unfortunately a troop of title-hunters of all classes and grades, in each district, who leave no stone unturned to achieve success. They are pretty well acquainted with the tactics by which to crown their wishes with fruition. They devote themselves to the work with an assiduity and zeal worthy of a better cause. Some of them are, no doubt, clever in their own way, but many of them seem to be credulous fools and allow themselves to be playthings in the hands of designing men who have constituted themselves title-brokers. The brokerage business is a lucrative one and flourishes most in Behar, where the reises are not as knowing as the Calcutta Babus. We are sorry to find native gentlemen in rather high positions and holding public offices partners in the trade and doing everything to further the end. It is not easy to detect malpractices under the cloak of friendship and patronage, but the astute can scent them. So lost are the members of the fraternity to shame that they often prostitute their position and degrade themselves winning the unholy race. The offensive business is carried on so extensive a scale that we have been compelled to take notice of it.

We must first explain the method or means generally adopted by these men. They talk, in and out of season, a good deal of their influence with the Lieutenant-Governor and other high officials. To their visitors, they do not fail to exhibit a list of persons for whom they have procured the favour of the sovereign or her viceroy. They converse with the local or the higher officials in favour of their clients. There is a selection of candidates. That is regulated by the length of the victim's purse. Usually, the best persons are those who have some claim for Government recognition or who happen to be in the good book of the district authorities. In this way, by false reports and information picked up in conversation with officials, the brokers make an impression upon the candidates who are led to believe in the patrons' power and influence. An actual conferment of a title in any talked of case confirms the belief. It is trumpeted forth throughout the province to draw more victims. The word flies from mouth to mouth that such a one has obtained for so and so his title. It is not difficult to feel the pulse of district officers or to obtain information from other sources for purposes of the trade. On numerous pretexts, money and other valuable presents are taken for work to be done. On completion, the recipient of honour is again reminded of his obligation. He is then made an *umedwar* for higher distinctions so that the exaction may continue.

Where information is accidentally received from a high circle or guessed out, a telegram of congratula-

The Indian Association for the Cultivation of Science.

(Session 1896-97.)

Lecture by Babu Ram Chandra Datta, F.C.S., Monday, the 30th November, at 4-15 P.M. Subject: Preparation and Properties of Chlorine.

Lecture by Babu Ram Chandra Datta, F.C.S., Tuesday the 1st Dec. at 4-15 P.M. Subject: Hydrochloric acid, Chlorides, Oxides and Oxy-acids of Chlorine.

Lecture by Babu Rajendra Nath Chatterjee, M.A., Wednesday, the 2nd Dec., at 7 P.M. Subject: Force and Motion (continued.) Composition and Resolution of forces—Centrifugal force.

Lecture by Babu Ram Chandra Datta, F.C.S., Thursday, the 3rd Dec., at 4-15 P.M. Subject: Oxy-acids of Chlorine concluded, Bromine, Hydrobromic acid and Bromides.

Lecture by Babu Ram Chandra Datta, F.C.S., Friday, the 4th Dec., at 4-15 P.M. Subject: Iodine. Compounds of Iodine with Hydrogen, Oxygen and Nitrogen. Fluorine.

Lecture by Dr. D. N. Chatterjee, B.A., M.B., C.M., Thursday, the 3rd Dec., at 5 P.M. Subject: Circulation.

Lecture by Babu Ram Chandra Datta, F.C.S., Saturday, the 5th Dec., at 3 P.M. Subject: Carbon and Carbonic Oxide.

Lecture by Babu Girish Chandra Bose, M.A., F.C.S., M.R.A.S., &c. Saturday, the 5th Dec., at 4-30 P.M. Subject: Histology of Plants—A Cell.

Lecture by Dr. Nilratan Sircar, M.A., M.D., Saturday, the 5th Dec., at 6 P.M. Subject: Histology—Muscle Nerve.

MAHENDRA LAL SIRCAR, M.D.,

Honorary Secretary.

Nov. 28, 1896.

tion is sent, followed by confidential letters telling how the whole thing has been managed and what the costs incurred have been. In two instances, the congratulatory messages brought back not only a thousand thanks but substantial currency notes of two thousand rupees each, from a Nawab and a Raja. The reputations of high officials have sometimes been compromised, as presents have been taken in the name of their favourite *amla*, if not in their own.

Beware then of title-brokers! Officers of Government, from the district Magistrates upwards, ought to guard themselves against the approach of wolves in sheep's skin. European officials will miss nothing if they refuse to talk upon the subject with such men. Sometime the approach is made in the shape of giving advice or information. Another danger is that the good and the true are mercilessly denounced in these visits, that they might not stand in the way.

The best course is to keep these interviewers at a distance. When any information is wanted, the responsible official must select honest men for such a delicate enquiry. The brokers are but few and they are, we believe, by this time sufficiently known, and it is not difficult to mark them out. Arrangements should also be made so that no information may ooze out before the Gazette is actually out.

Credit is sometimes taken for the bestowal of honour on even civilians. There are fools who would not hesitate to believe it. The fact is, that because our people are credulous they are successfully bamboozled in this way. It is a hopeless task to improve their intellect or give them sense, but at the same time, it is our duty to protect them from harm, if possible. We have, therefore, in view of the shower of honours of the next New Year's day, repeated our protest against a degradation of honours.

GENERAL PROGRAMME FOR THE NATIONAL CELEBRATION

IN 1897 OF THE FOURTH CENTENARY OF THE DEPARTURE OF VASCO DA GAMA FOR THE DISCOVERY OF INDIA

Drawn up in pursuance of the decree of the 5th of May 1894 and approved by Government.

1. The necessary authorisations and agreements having been previously given there shall be celebrated in the year 1897, throughout the whole of the Portuguese territory, a national jubilee, commemorating the expedition, which discovered the maritime road to India, and consecrated to the memory of the Portuguese navigators, who first discovered the lands and seas of Africa, Asia, America and Oceania.

2. Especially destined to commemorate, universally and perpetually this celebration, there shall be created :

a) A monetary series, in silver coins of 1,000 reis, 500 reis and 200 reis of lawful ring, diameter and circulation, within the limits and proportions, that may be competently established.

b) A series of postage stamps, with the types, limits and proportions that may be competently established.

§ 1. The Central Executive Committee for the celebration can grant and authorise, by or without competition, on the conditions that it may think convenient, the making and selling on private account, of a medal in gold, silver and any other metal, and of a medallion in bronze or iron, for the same commemorating purpose and character.

§ 2. An edifice in a convenient locality to be built or temporarily adapted, when it cannot at once be done so definitively, shall be specially destined for solemn, national and international receptions and meetings, connected with the celebration, and for installation and exhibition of the Colonial and Ethnographic Museum, in the terms of the decrees of the 12th of August 1880 and the 10th of March 1892.

3. In the same year 1897 the following exhibitions shall be held in Lisbon within the terms of the respective plans, as much as possible alongside the Tagus, between *Praca de D. Luiz*, and the *Jeronymos*, including the edifice of the *Cordoeira* (Rope-Yard) :

a) A National Agricultural and Cattle Show, with live samples of the rural ethnography, to include competition for floricultural, agricultural and lactical products ;

b) A National Industrial Exhibition ;

c) A National Ethnographical Exhibition ;

d) A National Exhibition for Fisheries, including the hydrography and orography of the Portuguese waters, their inhabitants and flora, fishing material and industries derived therefrom and aquariums ;

e) A National Exhibition of Chase, including the qualities and flora relating thereto, chase material and industries derived therefrom ;

f) A National Exhibition of Fine Arts, including works of the 15th and 16th centuries ;

g) A Colonial Exhibition Vasco da Gama.

4. Exhibitions on a smaller scale shall also be organized in the National Public Library and Archives, in the Army Arsenal, at the geological Committee, in the National Museum, in the Fine Arts Museum, and in other public institutions.

5. The Governments of the maritime nations shall be invited to send their naval forces to represent them at the centenary celebration in a great gathering of War Vessels, which ought to be held in the Tagus in the month of July 1897.

6. The large transoceanic Navigation Companies, the Chambers of Commerce and Commercial Associations of the principal maritime cities shall be asked to send representatives to the Centenary celebration.

7. On the same occasion, there shall be promoted the realisation in Lisbon of :

a) An international Regatta from the Tagus (Belem Tower) to Sines (the birthplace of Vasco da Gama), and one or more Regattas for coasters and river boats ;

b) An International Rifle Competition,

c) An International Competition for Bicycling.

8. Means shall be taken for holding in Lisbon in the same year divers Scientific Congresses and Conferences, both international and national, after previous agreement with the public authorities.

Sole proviso.—Likewise there shall be held a conference on public charity and beneficence, to which shall be invited all the charitable and such like institutions of the kingdom.

9. The Central Executive Committee shall promote the drawing up of Memoirs, Monographs and other literary and scientific works for the purpose of making better and more known :

a) The *Lusiadas* ;

b) The Monument of *Jeronymos* ;

c) The *Custodia* of Belem ;

d) History, Arts, Industries and Ethnography of the nation ;

e) The Progress of Science and the History and State of Public Education ;

f) Portuguese Navigations, Explorations and Conquests ;

g) The Lives and Deeds of the different Navigators ;

h) Formation, development and individuality, both historical and political of the Portuguese nation ;

i) The Portuguese scientific and industrial discoveries and inventions ;

j) The History of Portuguese Naval Art and the Study of the most important problems and questions of nautical sciences.

§ 1. The Committee shall establish the mode of appreciation of the Memoirs or works presented to it and the assistance, compensations or premiums to be granted, it being understood, that it will keep possession of the editions made in the Printing offices and on account of the Government either for the latter or in order that the respective proceeds revert in benefit of the funds for the celebration, without prejudice of the said assistance, compensations or premiums.

§ 2. A great planisphere shall likewise be executed, showing the discoveries and principal journeys by land and sea, made by the Portuguese and this shall be conveniently abridged for distributing among all the official schools and furnishing to private persons, who may apply for it.

§ 3. By agreement with the Government Printing Office of Lisbon a monumental edition of the *Lusiadas* shall be initiated, the whole of the material for which and for the work relating to the same shall be exclusively national.

10. The same Committee shall promote among national artists, to be chosen by them, the composition and execution :

a) Of a National Triumphant Hymn and March ;

b) Of a Historic Drama, the subject of which is to be Portuguese ;

c) Of a Portuguese Opera or Lyric Drama ;

d) Of Divers Pictorial and Sculptural Compositions, which are to contribute to the celebration or to affirm in the same the national art ;

e) Of Concerts and Musical Contests.

Sole proviso.—The Committee shall also promote the organisation of concerts for ancient Portuguese music, and the representation of some of the ancient national compositions for the theatre.

11. In order that the National Celebration may as far as possible be extended over all Portuguese territory, and may associate and embrace all classes of society, the Central Executive Committee

constitute in the kingdom, adjacent islands and in the colonies, and amongst all the Portuguese who reside in foreign countries, special Committees for the purpose of assisting that Committee and promoting and organizing the celebration in their respective areas.

12. All Cooperations or Associations of whatever nature, legally constituted can likewise cooperate or organize special celebrations in harmony with this general programme.

13. Any Committees or Associations that may resolve to cooperate and take part in the national celebration, shall communicate to the Central Executive Committee as early as possible their programmes and resolutions, in order to avoid confusion or contradictions in the works which may affect the harmony and signification of the grand national solemnity.

Sole proviso.—Any programmes or resolutions that have not been communicated to the Central Committee and agreed to by it, will not be taken into consideration for the effect of the mission with which it is intrusted, and will not be allowed when they go against or disturb the execution of the general plan and of the instructions that regard it.

14. The 8th, 9th, and 10th of July 1897 shall be for all effects considered as Holidays and national Feast days in all of the Portuguese territory, in the Embassies, Consulates and amongst Portuguese resident in foreign countries, and on board of all Portuguese vessels that at the time may be outside the waters of Portuguese territory.

15. At the dawn of day of the 8th of July 1897 all Portuguese fortresses and vessels of war shall hoist the Portuguese flag and salute the same with one hundred guns; the bells of all the churches shall be rung and in front of the Town Halls of all the districts, on which likewise the national flag shall be hoisted, large numbers of rockets shall be fired off; regimental bands or any other bands of music shall march through the towns and villages and play the Centenary Triumphant Hymn.

16. On the same occasion the places of public worship shall be thrown open, and thanks given to the Almighty for the Glory and Independence of the nation, and also prayers will be offered up for the souls of all those, who have served and honoured their country.

17. Likewise all the public buildings and establishments, depending on the State, the Town Councils and Parishes, shall hoist the national flag and shall decorate and illuminate the respective fronts on the 8th, 9th and 10th of July.

18. All citizens shall be invited to decorate and illuminate the fronts of their houses on the same days and to promote demonstrations of public rejoicing, appropriated to the object of the centenary.

19. In all the Parish churches a thanksgiving Mass shall be read or sung.

20. The authorities, administrative Cooperations and local Committees shall promote all kinds of festive demonstrations in their respective localities, and more especially general and popular ones, such as illuminations, fairs, processions, dances, popular games and songs on the 8th, 9th and 10th of July.

21. All the Town Councils shall be invited to take their competent places in all the solemn acts of the celebration, with their respective insignia and standards.

22. For the like purpose invitations shall be issued to:

a) All Agricultural, Commercial and Industrial Societies;

b) All Class, Aid, Mutual and Benevolent Associations and Sporting Clubs;

c) All Schools and Learned Societies and the Press.

23. At the hours and in the terms of the respective special programmes, the following demonstrations of festivity and of great public joy shall be realised in Lisbon:

a) On the 8th:

I. A *Te-Deum*, composed by a Portuguese author to be sung in the church of St. Maria de Belem.

II. A civic procession to the church of St. Maria de Belem (the first monument raised for commemorating the discovery of India), and to the tombs of Vasco da Gama and Camoes in the same church;

b) On the 9th:

A naval procession on the river to visit Alhandra and the *Quinta do Paraizo* (where Afonso de Albuquerque was born), and the inauguration of the Commemoration Monument.

c) On the 10th:

I. Review of the land and naval forces and of the military schools;

II. At night a grand march *aux flambeaux* from Belem to the Town Hall of Lisbon.

24. To meet the general expenses of the celebration, in charge of the Central Committee, a special fund shall be created with the denomination of "The Centenary Fund" and an agreement shall be made with a Bank, to be chosen by the Government, for depositing the same in account current.

25. The Executive Committee is authorised to resolve in all cases of omission or in unforeseen events.

26. In harmony with the Decree of the 15th of May 1894,

all public authorities and departments shall afford all the assistance and cooperation they can, to the Executive Committee of the Grand Committee appointed by this Decree, which for all effects and to the end shall be the Central Executive Committee for the Celebration.

Committee Rooms, the 10th of June 1896.—For the Central Executive Committee: *Francisco Joaquim Ferreira do Amaral*, president—*Luciano Cordeiro*—*Ernesto de Vasconcellos* secretaries.

QUALIFICATIONS AND DUTIES OF MEDICAL OFFICERS OF HEALTH.

[Extracts from *A Treatise on Hygiene and Public Health*, edited by Thomas Stevenson, M.D., and Shirley F. Murphy, Medical Officer of Health of the Administrative County of London.]

(Concluded from page 536.)

Beyond the legal qualifications there are others of a personal nature which are essential in the successful medical officer of health. Since he is not so much an executive officer as he is the adviser of the local authority appointing him, on all matters pertaining to his office, he must be prepared from time to time to accept with equanimity the rejection of any advice he may have rendered to them, however sound it may have been. He must not be too sensitive in the event of his advice or actions being misunderstood or even misconstrued, if he is conscious of having been actuated by proper motives.

He must not advise lightly, hastily, or inconsiderately on any matter, but only after due deliberation, and must put himself in a position to be able to stand by and, if necessary, to defend his advice, since it may be initiative of legal proceedings. Hasty or ill considered advice, thoughtlessly given would disparage him and diminish his influence with the public, as well as with the local authority.

Having advised conscientiously and to the best of his abilities, he has discharged his duty, and if his advice is not followed he must bear in mind that the decision of the authority may have been subject to considerations and influences which had no weight with him. If, on the other hand, he finds that his advice is systematically and persistently ignored by the authority, and that the public in his district is likely to be prejudicially affected in consequence, he must repeat it, again and again if need be, firmly but dispassionately. His advice on all matters of importance should be tendered to the local authority in writing, with a view to future reference.

He should, under many circumstances, endeavour to induce the authority themselves to propose any works which may be needful for the benefit of his district, rather than urge the proposals too much as emanating from himself. He will often find some members of the authority willing to take a matter up as a scheme of his own, and what may be legitimate pertinacity in a member of the authority might be considered unbecoming obstinacy in the medical officer of health. By paying attention to this point he will not infrequently gain his end more surely than if he had paraded the proposal as his own. It is not conducive to success for him to be continually thrusting himself prominently forward in his official capacity. His power for good will not be lessened if he sometimes judiciously obscures his individuality.

He should regard all questions he has to deal with from the view-point of the local authority, the owners and occupiers of premises, and the public, as well as from that of the medical officer of health intent upon the health improvement of his district.

He must be possessed of good judgment, discretion, and tact, for he will have various and varied persons and matters to grapple with; from this it follows that the larger, wider, and more varied his experience in his special branch of the profession may be, the better able will he be to perform with efficiency the duties pertaining to it.

While careful to avoid encroaching in any way upon the province of the clerk, the surveyor, or the engineer of the authority, he should, nevertheless, have an intimate acquaintance with all the statutes and bye-laws relating in any degree to his office, and should be conversant with the principles of modern sewage, drainage, disposal of sewage, water-supply, warming and ventilation of buildings, and house construction; and while not taking upon himself the duties of the inspector of nuisances, he should be intimately and practically acquainted with them.

He should have a knowledge of any trades, articles of trade or manufacturing processes that are liable to be controlled by the local authority.

He must be well acquainted with the etiology, so far as it may be known and the characteristics of those diseases, at any rate, which are capable of influencing the public health, the most numerous of which will be found amongst the zymotic diseases, and must know the principles of hospital construction, especially in relation to hospitals for the isolation of infectious diseases.

He should possess a general knowledge of bacteriology, and

he will probably find that his multifarious duties will not allow him sufficient leisure to become proficient in the practice of it, and that he had better leave that to those who have the time and the opportunity to become expert in it; such specialism and division of labour is a necessary outcome of the vast multiplication of the scientific knowledge of the age.

He must be trained in the methods of observation requisite for tracing the origin and course of epidemic and other diseases.

He must be capable of expressing himself in his reports with terseness and perspicuity.

He must know how to compile statistics, how to deduce sound conclusions therefrom, and how to avoid fallacies in dealing with them.

He should, at any rate, know how to properly interpret the results of analyses of water, air and articles of human consumption, and should understand meteorology, climatology, and cognate subjects. He should be acquainted with the general facts relating to the geology of his district.

He should possess an even temper, as he will find it frequently tried. If of an irritable or excitable temperament, he must train himself to control it, it is of the utmost importance that not one of his official actions or expressions should savour in the remotest degree of resentment or vindictiveness.

He must be patient and persevering since his efforts should be directed to the accomplishment of his objects by persuasion rather than by compulsion. He must endeavour to educate rather than to force public opinion, seeing little good is to be done by attempting to go much in advance of that in regard of matters pertaining to public health.

He must not be impulsive, but must be methodical, exact, and punctual in all his dealings, and must conduct the business of his department in a manner that will not cause friction with any other department connected with the local government of his district. He must show courtesy and respect to any member of the local authority.

Whatever his political bent may be, he must strictly avoid making any public parade of it; it is absolutely essential that he should banish any suspicion of political bias from all his official proceedings; even if the authority is so unwise as to allow the local government of their district to be swayed by political considerations, as too frequently happens, he must not permit himself to be influenced by them, since he is the officer of the whole public and not alone of any section of it.

He must not allow himself to be drawn into any local newspaper controversy in regard of any of his official action. Such a proceeding marks a very raw and inexperienced office-bearer. If he has acted wrongly he will not thus clear himself, but if rightly, his sense of the dignity of his office should preclude him from taking such a course, as tending to bring it into contempt, and himself into ridicule.

He must not go beyond his special province; he will seldom gain any credit, but often very much the reverse, if he sets himself to do anything beyond that which comes strictly within his statutory duties. If, however, he observes anything amiss which does not come within their scope, he will do well to give an intimation of his observation in the appropriate quarter.

Above all, he must practise the strictest honesty, integrity, straightforwardness, and impartiality in all his actions, and must rigorously resist the slightest attempt on the part of any one to do anything towards him which could by any possibility be construed as an effort to influence his conduct as a public officer. He must regard himself as the custodian of the fair fame of public offices in general and of his own in particular.

It is desirable that he should occupy such a social position as will fully command the confidence and respect of all classes throughout his district.

He must cultivate cordial relations with the whole of the medical profession in his district, as without their confidence, respect, and co-operation, his work will become much more arduous and be far less successful, his power for good will be greatly crippled. His behaviour towards them should be regulated by what his conscience tells him would be the treatment he should expect from a medical officer of health if he were himself in practice. He must be careful not to wound their legitimate susceptibilities and sensitiveness; especially must he be on his guard in these respects if he is also a private medical practitioner. The passing of the Infectious Disease (Notification) Act, 1889, accentuates if possible the importance of mutual confidence and esteem being upheld between the profession and the medical officer of health. Unfortunately his obligation is not always comprehended, and in consequence, there have been instances in which the medical officer of health has erred grievously in that behalf, at sometimes through ignorance of his powers and duties, but at others through personal unfitness for the office.

He must not regard himself as in any way the censor of his medical brethren, but must endeavour to win their trust and confidence, so that they may freely seek his advice and assistance in regard of any matters within his province occurring in their prac-

tice. If in the discharge of his duties he is brought into contact with any irregular practitioner, his dealings with him must not be regulated by ordinary professional rules, but must be guided by regard for the public weal, which must be the paramount consideration.

In his relations with the public, the medical officer of health must be considerate and unobtrusive. He must endeavour to carry out his, occasionally unwelcome, duties in such an equitable manner as shall not provoke resentment, and must so exercise his powers that his visits may be welcomed rather than shunned; he must have regard for the rights and interests of the owners as well as of the occupiers of premises, so that his advice and assistance may be readily sought by both alike.

The removal of house refuse at regular and frequent intervals has an intimate relation with the prevention of disease and health. It is incumbent upon the medical officer to see that refuse is not allowed to remain and decay in the vicinity of inhabited dwellings. In thickly populated parts he will probably find it necessary to advise the local authority, if they have not already done so, either themselves to undertake or to contract for the removal of house refuse from premises, and the cleaning of earth-closets, privies, ashpits and cesspools. The adoption of these measures has been many times clearly proved to immensely improve the public health of places where preventible disease had previously been rife; diminished mortality and a generally bettered state of health having rapidly ensued.

NEEDLESS ALARM.

Whether the suffering which people undergo from disease is more physical than mental is a point not easy to decide. It depends largely on the nature of the disease, and the make-up of the individual. Experience seems to show, however, that in one prevailing disease—indigestion or dyspepsia, the two kinds of suffering are very evenly divided, and both very great, the mental distress being chiefly due to the illusions and deceptions which attend it. For example, though dyspepsia is solely an affection of the digestive organs, it has power to set up disorders in others which always alarm the sufferer, and often perplex his medical advisers. These symptoms or sequences may relate to the head, the heart, the sight, the hearing, the lungs, or to other organs or functions. Take an illustration or two.

"In the spring of 1891," says Mr. Edward Tatham, "I fell into a low, weak state of health. I had a foul taste in the mouth, and was constantly spitting up a thick phlegm. My appetite was poor and after eating I had fullness and pain at the chest—the latter seemed to be puffed or swollen. What made me most anxious was my *breathing*, which came to be so difficult and short that at times I could only catch my breath by an effort. I was led to fancy that something must ail my lungs, especially as so great a quantity of mucus gathered in my throat and mouth. It was usually worse at night, and I got very little sleep on account of it; sometimes none at all. In a morning I would be quite worn out.

"As time went on I became very weak, and was much put to it to get about. I took all kinds of medicines and got no proper relief from anything. In February, 1893, Mr. William Beardsley, grocer, Colman-hay, told me how he had been cured of a like trouble by Mother Seigel's Curative Syrup. Acting on his advice I got a bottle of this medicine from Mr. Platt's Drug Stores, Ainsworth Road, and after taking it felt quite another man. My *breathing* was easier, and my food agreed with me. I continued using the Syrup, and got stronger and better every day. When I had taken four bottles I was as well as ever, being free from all pain or discomfort. My wife, who has suffered for years from *liver complaint*, has taken the Syrup with the same good results as in my own case. You are at liberty to make any use you like of this statement. (Signed) Edward Tatham, Tatham's Lane, Colman-hay Road, Ilkeston, Derbyshire, March 21st, 1895."

"In October, 1888," writes another, "I began to feel weak, heavy, and tired. My appetite was poor, and after eating I had distress at the stomach, together with *shortness of breath*, and a good deal of pain across the chest. Sometimes I would be taken with sudden dizziness, as though I must fall to the ground. Cold, clammy sweats used to break out all over me and I trembled from head to foot. Finally, I got so weak I could scarcely walk to my work. Indeed, I had occasionally to leave my work; I have been away as long as a month at a time. In this way I suffered for about two years.

"In August, 1890, Mr. Thompson, the grocer in Church Street, urged me to try Mother Seigel's Syrup. After taking only one bottle I felt better. My food agreed with me and I was stronger. Continuing with this medicine, gradually all pain left me, and I completely recovered my health. Since then I have kept the Syrup in the house for use in time of need. You are free to publish this statement. (Signed) William Mullender, 71, Robinson's Buildings, Newhall, Wath, near Sheffield, October 11th, 1895."

Cases of supposed disease of the heart, of the nervous system, of the kidneys, &c., constantly prove to be, not organic affections of those parts at all, but merely local or functional disturbances caused by the toxic or poisonous principles thrown into the blood by the decomposition or fermentation of food in the stomach; otherwise, by dyspepsia or indigestion. But until they are discovered to be so they are mistakenly treated; and serious, often fatal, results, follow. Until pronounced and undeniable symptoms of organic mischief show themselves (which is not the case once in a hundred times) you may take it for granted that your ailment is some form of dyspepsia, easily curable by Mother Seigel's Syrup, as demonstrated by the two instances cited above.

**MILITARY SECRETARY'S OFFICE.
NOTIFICATION.**

Simla, the 16th September, 1896.

No. 9444M.—His Excellency the Viceroy and Governor General will reach Calcutta on Thursday, the 10th December 1896, arriving at Howrah by special train at 9 15 A.M. Calcutta time.

On arrival at the Howrah Railway Station His Excellency will be received by the Chairman of the Corporation of Calcutta, the Commissioner of Police for the Town of Calcutta, and the Magistrate of Howrah; and at Government House by His Honour the Lieutenant-Governor of Bengal and Staff, the Honourable Members of His Excellency's Council, the General Officer Commanding the Presidency District and Staff, the principal Civil and Military Officers, and other gentlemen who are desirous of attending.

A Guard of Honour of the East Indian Railway Volunteers will be drawn up on the platform of the Howrah Railway Station, and a Guard of Honour of Native Troops with Band, outside the Station.

The route taken will be by the Hooghly Bridge, Strand Road, Fatile Place, Dalhousie Square North, and Old Court House Street.

The Body Guard and the Calcutta Light Horse will form His Excellency's Escort.

A Royal Salute will be fired from the Ramparts of Fort William as His Excellency alights from the train.

A Guard of Honour of British Infantry and of the Presidency Volunteers will be drawn up in front of the Grand Staircase of Government House.

Full Dress will be worn by those entitled to wear uniform. Review order by Military Officers. Gentlemen not entitled to wear uniform will appear in Morning Dress.

By Command,

A. DURAND, Colonel,
Military Secretary to the Viceroy.

**Don't
Be Blind.**

Don't refuse to believe in a thing, till you've tried it. Thousands of people suffer the indescribable tortures of RHEUMATISM because they have never heard of

**Little's
Oriental Balm**

or because they are blind to their own interest and refuse to try it. It is a most marvellous pain killer and relieves rheumatic aches almost instantly. It soothes the nerves, allays inflammation of the flesh and quickly penetrates to the bones themselves. There is no reason why any one should suffer with Rheumatism if they have Re. 1 to pay for a bottle of this unfailing remedy.

CO., CALCUTTA.**

**Sir George Chesney Memorial
Committee.**

CHAIRMAN :

General Sir Henry W. Norman.

MEMBERS :

The Marquess of Lansdowne, Field Marshal Lord Roberts, Mr. George Allen, Colonel Sir J. Arnagh, Sir Stewart Bayley, Mr. William Bickwood, Sir Edward Braddon, Rev. A. G. Butler, Colonel Sir G. S. Clarke, General Sir E. Collen, Sir Auckland Colvin, Sir Julian Danvers, General C. H. Dickens, Sir Mortimer Durand, General Sir W. Stirling Hamilton, Captain Hext, R. N., Mr. A. P. Howell, Sir W. W. Hunter, Lieut.-Genl. McLeod Innes, General Sir Allen Johnson, Sir H. S. King, M. P., Mr. A. Lawrence, General Sir R. Low, Sir Alfred Lyall, General Sir O. Newmarch, Sir Andrew Scoble, Field Marshal Sir Lintorn Simmons, Field Marshal Sir Donald Stewart, General R. Strachey, General Sir A. Taylor, Mr. Meredith Townsend, Mr. W. C. Unwin, General Sir George White and General Sir E. Williams.

Memorial

TO THE LATE

SIR GEORGE CHESNEY, K.C.B., R.E., M.P.

A Meeting was held, on the 24th April, at the Royal United Service Institution, of some of the friends of the late Sir George Chesney, to consider the question of the commemoration of his distinguished services as Soldier, Administrator, Statesman, and Author. General Sir Henry Norman presided, and was supported by Field Marshals Sir Lintorn Simmons and Sir Donald Stewart, and other friends of Sir George Chesney. To carry out the object of the Meeting, a General Committee was formed, which included the gentlemen then present, and in addition, the Marquess of Lansdowne, Field Marshal Lord Roberts, General Sir George White, Sir Andrew Scoble, Sir Alfred Lyall, Sir H. S. King, Sir W. W. Hunter, Mr. Meredith Townsend, General Richard Strachey, Mr. William Blackwood, and others.

The form the Memorial should take was left to the future consideration of the Committee, as it would depend on the amount subscribed, but the suggestions tended towards a bust of Sir George for the India Office, and a medal for valuable contributions to Military Literature. It was resolved to limit each subscription to a maximum of three guineas.

Subscriptions will be received by Lieutenant-General McLeod Innes, 9, Lexham Gardens, Cromwell Road, London, W.

COMMITTEE FOR INDIA :

His Excy. General Sir George White, V. C., G. C. I. E., K. C. B., the Hon'ble Major-General Sir E. Collen, K. C. I. E., Lieutenant-General Sir W. S. A. Lockhart, K. C. B., K. C. S. I., His Excy. Lieutenant-General Sir C. Mansfield Clarke, K. C. B., Major-General J. Duncan, Major-General G. E. L. S. Sanford, C. B., C. S. I., Major-General G. de C. Morton, C. B., Major-General A. R. Badcock, C. B., C. S. I., Brigadier-General W. G. Nicholson, C. B., Captain J. Hext, C. I. E., R. N., Colonel W. S. S. Bisset, C. I. E., R. E., Colonel T. Deane.

Honorary Secretary :
Colonel T. Deane,
Simla.

Subscriptions will be received, in India, by Messrs. King, King & Co., Bombay; Messrs. King, Hamilton & Co., Calcutta; and by the Alliance Bank, Simla, and its branches at Calcutta, Cawnpore, Agra, Ajmere, Darjeeling, Lahore, Murree, Mussoorie, Rawal Pindi and Umballa. Subscriptions are limited to a maximum of Rs. 32 in India.

By order of the Committee,
T. Deane, Col.,
Hony. Secy.

Simla, 18th July, 1896.

THE AUTHENTIC WEBSTER.

Revised, Enlarged, and Reset in New Type—

**WEBSTER'S
INTERNATIONAL
DICTIONARY.**

2,118 pages, 3,500 Illustrations, cloth, £1-11s-6d.; half-cloth, £2-2s.; half-Russia, £2-5s.; 1 Two Vols. cloth, £1-14s.

GEORGE BELL & SONS,

LONDON AND BOMBAY,

And all Booksellers.

**"WEBSTER'S INTERNATIONAL
DICTIONARY**

is truly a magnificent volume. It contains 2,118 pages, or 200 more than the last revised edition of 1880 and nearly 4,000 illustrations, of which about two-thirds have been done especially for this edition. Even a superficial comparison with the last edition will show how thorough has been the revision. It is not merely the correction of a few errors and the addition of a few hundred new words. Every page has been treated as if the book was now published for the first time. If we turn to the letter L we find that, on the first two pages, no fewer than forty-three words are found which have been recorded in no previous edition. At this rate the *International* would contain upwards of 36,000 more words than the last edition. To make room for the large accession of new words and meanings much condensation has been made, and a comparison between the editions will show how carefully and consistently this has been carried out, and how much more information is now given within the same space. Take, for example, the word 'disbar,' here is the old definition: 'To expel from the bar; said of barristers who, in England, may be excluded from the bar in accordance with power vested in the benchers of the four Inns of Court, subject to an appeal to the fifteen judges.' And this is the revised definition: 'To expel from the bar or the legal profession; to deprive (an attorney, barrister, or counselor) of his status and privileges as such.' It will be noticed that the latter is not only the shorter but the fuller of the two. Similar examples might be multiplied indefinitely, all showing the thoroughness with which the definitions have been rewritten and condensed without sacrifice of clearness. Of the new words for which this revision makes room, they are too numerous and various even for classification. They have been coming into use ever since the great verbal census of the language was taken in 1864, and include the now familiar terms of electricity, such as volt, ohm, ampere, and dynamo; new slang phrases, or the slangy meaning attached to old words, such as boodle, chestnut, and a whole catalogue of theatrical and sporting phrases; words recently coined to meet a special case, such as Prof. Huxley's 'agnostic,' Prof. Vaughan's 'tyrotoxicom,' and countless others of which even a purist in language cannot well afford to be ignorant, as they abound in every newspaper of the day and nearly every new book that issues from the press."

SPECIFICS

for all ordinary diseases, like Fever, Cough, As-
thma, Phthisis, Diabetes, &c., including dis-
eases brought on by irregularities of kinds.
Catalogues, containing full accounts of diseas-
es and remedies, are transmitted on applica-
tion. Prescriptions, with or without medicines,
sent to every part of India and Ceylon,
Cape Colony, and the British Isles, on receipt
(by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from
every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these
diseases are contagious, or that they are
due to the presence of living parasites in the
lining membrane of the nose and eustachian
tubes. Microscopic research, however, has
proved this to be a fact, and the result is that
a simple remedy has been formulated whereby
these distressing diseases are rapidly and per-
manently cured by a few simple applications
made at home by the patient once in two
weeks. A pamphlet explaining this new treat-
ment is sent on receipt of 2½d stamp by A
HUTTON DIXON, 43 & 45 East Bloor St.

VOL. XV.

CALCUTTA, SATURDAY, DECEMBER 5, 1896.

WHOLE NO. 752.

A DAY-DREAM.

THERE are bright and happy hours
In this dwelling-place of tears,
Sunny gleams between the showers,
Merry birds and smiling flowers,
Hopes that conquer fears.

There are many sweets that mingle
In the cup of mortal sadness,
Fairy bells that softly tingle,
By woodland way and forest dingle,
Moving hearts to gladness.

There are fairer, brighter things
Starlike gem the path of life :
Sympathy that ever brings
Friendship on its dove-like wings ;
Faithful love till death that clings ;
Peace, the sleep of strife.

Thus I mused one soft spring morn,
While, her clear soprano ringing,
A sweet nightingale was singing
From her seat in the old thorn.
Then, methought that at my side,
Harshly thus a voice replied—
“Dreamer, as you name each blessing,
With your gaze upon the sky
Wrapped in a fool’s fantasy,
Tell me which art thou possessing.”
And at these strange words I wondered,
But the bird was singing still,
And an echo from the hill
Seemed to ask me why I pondered.
Then I answered musingly,
“Love, the urchin, ever roving
To and fro, still passes by,
Glancing with a roguish eye,
Leaving me unloved, unloving.
Better so, for love,” I said,
“Flashes like a meteor gleam ;
And realities but seem
Harsher by the light it shed.
I have many a loving friend ;
With their pleasant voices near me,
And their sympathy to cheer me,
I will wear life to its end.
And when death has had his will,
Sparkling eyes for me will weep,
Loyal hearts a corner keep,
For our friendship’s memory still.”

—Sharpe’s Magazine.

WEEKLYANA.

THE Levée has been fixed for Thursday, the 17th December, at the usual hour of 9-30 P.M. and the Drawing Room at the same hour on Saturday the 19th December.

Today is the last day for sending in cards for the Levée, and Wednesday next for the other reception. The Government House notifications regarding the two ceremonies will be found elsewhere.

THE fifth or the last Criminal Sessions of the High Court for the current year, will commence on Monday, the 7th December, under the presidency of Mr. Justice Jenkins.

•••

THE holiday notifications of the Bengal Government for the next year run in these words :—

“Under section 25 of Act XXVI of 1881, entitled ‘The Negotiable Instruments Act, 1881,’ the Lieutenant-Governor hereby declares the following days to be public holidays during the year 1897 :—

All Sundays.		
January 1st	...	New Year’s Day.
February 6th and 7th (Sunday)	...	Sri Panchami.
March 18th	...	Dol Jatra.
April 12th	...	Chaitra Sankranti.
April 16th	...	Good Friday.
April 17th	...	Easter Saturday.
June 10th	...	Dasahara.
August 20th	...	Janmashtami.
September 26th (Sunday)	...	Mahalaya.
October 2nd, 3rd (Sunday), 4th, 5th	...	
10th (Sunday) and 11th	...	Durga-Lakshmi Puja.
October 25th and 26th	...	Kali Puja.
November 3rd and 4th	...	Jagadhatri Puja.
December 24th	...	Christmas Eve.
December 25th and 26th (Sunday)	...	Christmas Day and the day following.

The day which may be fixed by the Government of India for the observance of the Birthday of Her Majesty the Queen-Empress of India shall also be a public holiday.

“With reference to the above notification, the Lieutenant-Governor hereby notifies that on the following days during 1897, which are not declared to be ‘public holidays,’ the offices under the Government of Bengal and all Revenue and Magisterial Courts in Bengal, with the exception of the offices of Collector of Customs, Shipping Master, the Registrar of Assurances, Calcutta, the Collector of Stamp Revenue, Calcutta, the Stamping Department of the office of the Superintendent of Stamps, Calcutta, and the Salt Rawana and Opium Departments of the Board of Revenue, shall be closed :

I.—Muhammadan Holidays.

Id-ul-fitr	...	On the 6th March, but if the moon be visible on the 4th, then on the 5th March.
Id-uz-zuha	...	On the 13th May, but if the moon be not visible on the 3rd May, then on the 14th May.
Muharram	...	On the 11th and 12th June, but if the moon be visible on the 1st, then on the 10th and 11th.
Fatiha Dawazdaham	...	On the 12th August, but if the moon be visible on the 30th July, then on the 11th August.

II.—Hindu Holidays.

Durga-Lakshmi Puja	...	30th September, 1st, 6th, 7th, 8th and 9th October.
--------------------	-----	---

III.—Other Holidays.

Two days preceding Christmas Eve.	...	22nd and 23rd December.
-----------------------------------	-----	-------------------------

H. H. RISLEY,
Secy. to the Govt. of Bengal.

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

THE head-quarters of the Burdwan Commissionership has, from the 1st December, 1896, been removed from Burdwan to Chinsurah. What the father was not permitted to do, the son has accomplished. Mr. C. T. Buckland was peremptorily ordered to go back to Burdwan when he had removed his office to Howrah. The present Commissioner Mr. C. E. Buckland will now reside in the Chinsurah barracks as Commissioner of the Burdwan Division.

20,773 persons visited the Indian Museum during the month of November, the total being made up of 275 male and 130 female Europeans, and of 16,057 male and 4,311 female natives of India. The daily average during the 11 days on which the Institution was open to the general public was 1,888.

A JAPANESE soldier is allowed seven ounces of meat, an Austrian or Spanish private eight, a French, Turkish, German, or Belgian nine, an Italian eleven, an Englishman twelve, a Russian sixteen, and an American twenty. The ration of bread is highest in the Austrian Army, thirty-two ounces, and lowest in the English, sixteen ounces. In the German army it is twenty-eight ounces, in the French and Italian, twenty-two, the same in the United States, and in the Russian army seventeen ounces. All modern armies, save the Russian, have a daily allowance of rice.

PROF. W. Oswald of Germany, in a letter to Prof. W. Ramsay of England, points out the superiority of scientific education in Germany to that in England, thus :—

"In our frequent discussion on scientific education we have both often been struck with some points of very great difference between the English and the German way of dealing with it. As it may be asserted without national arrogance that university education in Germany is in a more satisfactory condition than in your country. You are, of course, anxious to know which of the German customs I consider most effective in bringing about this better state of things; and I will, therefore, try to point them out. Of course, I shall confine myself to the subject of natural science, and especially chemistry and physics, feeling myself unable to deal with sciences beyond my knowledge. The main point of our system may be expressed in one word, freedom—freedom of teaching and freedom of learning. The first involves for the teacher the necessity of forming in his mind a clear conception of the scope of his science, for as he is free to choose any possible method of view, he feels himself answerable for the particular one he has chosen. And in the same way the student feels himself responsible for the method and the subjects of his studies, inasmuch as he is free to choose any teacher and any subject. One who has not seen this system in action may be inclined to think that such a system must lead to arbitrary and irresponsible methods on the side of the teacher, and confusion on the part of the student. But the former is avoided, because at the beginning of his career the teacher is dependent for his advancement on the results of his scientific views, and is naturally anxious to improve his position in the educational world. As for the students, they themselves impose certain restrictions on their own freedom. Most of them feel that they require some advice and guidance, and they therefore follow the usual and approved order in conducting their own studies. As to the inventive man of original ideas, it has often been proved that for him any way is almost as good as any other, for he is sure to do his best anywhere. Moreover, such a man soon excites the interest of one of his teachers, and is personally led by him, generally to the great advantage of both."

THE Berlin "Vossische Zeitung" published the recent terrific ballooning experience of some aeronauts. One of them, M. Bouteux, says:—

"When we had risen 600 yards or more, we found ourselves in such thick clouds that we could distinguish nothing. Suddenly the Jupiter lay on one side and the car leaped terribly. At the same time we were lashed by large hailstones and heavy rain. We were driven forward with bewildering speed. In our fright we threw out everything that our hands came across. The balloon sprang upward like an arrow and soon passed through the clouds. We were under a clear sky, in the light of the setting sun. Gradually it grew colder and colder, and our outclothes were frozen stiff. Crepillon fell fainting to the bottom of the boat, and we others were not much better off. As I looked out I saw a large black cloud moving from south-west to north-east. But we still rose. Then I saw nothing more. The blood streamed from my nose and ears. My hands were frozen hard as a board.

In a few minutes we had risen to a height of nearly 5,000 yards. Then we began to sink, first slowly, then rapidly. All at once we were again in complete darkness. We were in the midst of thunder clouds. Again, amid hail and rain, the wind drove the Jupiter on at a speed of ninety miles an hour. We were blinded by the hail and could scarcely breathe. But I did not lose hope of reaching the earth safely. The hail and rain now began to be mixed with leaves and particles of earth. The car was violently shaken, and we fell against each other, and had to hold on to the ropes. Then we began to drag along the ground. The balloon suddenly rose again. I let my rope go, and was dashed to the ground. Legrand believed that I had voluntarily jumped out. He jumped after me, and fell near me with a broken leg. Thus lightened of weight the balloon rose more rapidly. Rushing through the tree tops,

it went on about six miles in the direction of Gretz. As it hung on the top of a tree Foucard tried to land, caught a rope, but was thrown violently to the earth. A woman saw the balloon hanging in the trees and sent the people at her inn to our assistance. Foucard was found covered with mud and ice, his face all torn. He still breathed. When his head was raised with the intention of giving him stimulants, he was seized with a convulsion and soon expired.

As he was carried away a weak voice was heard calling from the car for help. Two ladders were brought and tied together, and a gendarme climbed up to assist Crepillon. It took an hour to get him down. On reaching the ground he fainted away. He was cold as ice, and only regained his senses after continued friction. In a few hours he was out of danger."

THE electric tramway, constructed in Egypt, was opened at Cairo on August 1.

THE British Parliament has made no less than 20,000 statutes, of which 5,000 are in force. 3,300 have been passed in our Empress's reign. 151 date from Henry III, the first three Edwards and Richard II, 25 from the House of Lancaster, 3 from that of York, 170 from the Tudors, 69 from the Stuarts, 92 from William III and Anne, and 1,132 from the four Georges and William IV.

BICYCLE is now utilized for army-march, producing no noise, the folding pattern being in use. In the Russian army it is the order of the day.

THE year 1896 will be memorable for many commemorations. Apart from the celebration of the sixtieth year of reign of our beloved sovereign, the longest of any English monarch's, we have others of scientific and general interest. The centenary of the discovery of vaccination by Jenner was celebrated with pomp in Germany, Russia and in the United States but not in England, the discoverer's birthplace.

It is also the jubilee year of the introduction of anæsthetics in surgical practice. The terrible suffering of an operation is now avoided. The letter of a doctor patient who had undergone amputation, to Dr. Simpson describes the horror, in the following few words, of the dark period :

"Of the agony it caused I will say nothing. Suffering so great as I underwent can not be expressed in words, and thus, fortunately, cannot be recalled. The particular pangs are now forgotten, but the black whirlwind of emotion, the horror of great darkness and the sense of desertion by God and man, bordering on despair, which swept through my mind and overwhelmed my heart, I can never forget, however gladly I would do so."

It is again the hundredth year of the declaration of faith by Hahnemann for *similia similibus curentur*, (let likes be treated by likes), since formulated in the law *similia similibus curentur* (likes can be treated by likes). To America we owe its propagation, though the birth-place of the hero, Germany, has been apathetic to him.

Last in the list is the potato tercentenary. In 1596 the first potato was planted in England, in Holborn, about the time that Sir Walter Raleigh was planting the first Irish potato at Yonghal near Cork. The Spaniards introduced the tuber into Virginia, North America, from either Peru or Chile, where it grows wild. They also carried it to Spain long before the Raleigh culture. From Spain it was taken to Italy and thence to Flanders in 1598. The Spaniards call it *batata*.

The introduction of potato into England was directly due to Raleigh, whose Virginia expedition ships brought back some specimens in July 1586. Calculated from that date the celebration is ten years later.

The value of this article of human food was not appreciated till the famine of 1771-72 in Germany. Before this critical period, it was a botanical curiosity, gradually turned into a food of delicacy. When Parmentier developed the plant in France, Louis XVI and Marie Antoinette wore its flowers as ornaments. Frederick the Great also stimulated its cultivation. In Scotland the tubers were not cultivated before 1732.

The potato (*Solanum Tuberosum*) is not a root. It is an underground stem, swollen by accumulated starch stored up for future use. Tobacco (*Nicotiana Tabacum*) was also introduced into Europe about the same time. It is now one of the highly taxed articles of commerce in England.

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 19, SOUTHAMPTON BUILDINGS, HOLBORN, LONDON.

The time of the introduction of potato into India is not known. Roxburgh who came here at the end of the eighteenth century found it widely cultivated. It is possible that this tuber was brought to India by the Spanish merchants, in the sixteenth century, when most of the edible fruits were transplanted.

From earth to heaven, 1896 is also the jubilee year of the discovery, by Herschell, of the planet Neptune.

NOTES & LEADERETTES,

OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

THE British Government have given a written pledge to France that the Niger expedition will not touch any point at present in dispute with France.

SEVERAL large Russian landowners are offering supplies of corn for the victims of the Indian famine. The newspapers are urging the Government to assist by land and sea the transport of these gifts. The *Moscow Bourse Gazette* strongly protests against the Government organising relief for the Indian famine, and declares that private efforts have produced but little response. Government, it adds, has plenty to do at home without troubling about India. But, is not India its cynosure?

THE Shah has announced that henceforth he will dispense with a Premier, and will himself preside over a Cabinet of twelve responsible Ministers. Will he have the time and patience for the work?

PARLIAMENT will meet on 19th January.

AN informal report from Earl Grey to the Chartered Company states that the war is now ended. The only remaining enemy is Nungler. He eulogises the immense services rendered to the Company by Mr. Rhodes.

PRESIDENT Kruger, in a speech at Pretoria, condemned the damaging reports which have been made that the Transvaal would forcibly break the London Convention, which guarantees the independence of the Republic, and which, if modified, would be by constitutional means. He was confident that when the claims for the Jameson raid were presented, Great Britain would fairly meet just demands. It was, he said, to the interest of the Transvaal to foster the mining industry.

NUMEROUS arrests have been made at Constantinople of Turks implicated in the Young Turkish movement.

ELECTION disturbances took place at Sofia. The police and cavalry twice charged the crowds. Bloodshed is also reported from other towns in Bulgaria.

THE Hamburg strike has ended.

THE Powers have presented a note to the Porte declaring that they will organise the gendarmerie and judiciary in Crete without the Porte's concurrence, unless the reforms promised in the Sultan's irade in August last is executed.

THE *Standard's* Paris correspondent reports that Mr. Pasteur's pupil, Doctor Yersin, who has been working at Saigon for the last five years, has discovered an anti-plague serum which has effected numerous cures.

THE *Times* states that the Russian Mission to Abyssinia has secured great influence with the Negus, and will remain there as long as the British remain in Egypt.

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

IN the Italian Chamber of Deputies the Marquis di Rudini stated that it was not yet time to come to a final decision with regard to Erythrea, which he regarded as a permanent danger. Parliament, he said, must decide the future policy to be followed in that quarter according to the true interest of the country, which could never attain greatness while engaged in colonial enterprises which were disproportionate to its resources. The Chamber, by a large majority, has rejected the motion of the Opposition for an early discussion of the abandonment of Erythrea.

MR. Curzon, speaking at Manchester, said that the brilliant issue of the Sudan campaign was the happy augury of future triumphs. He believed the irritation in England against Germany had entirely subsided. With regard to the Transvaal, he said that the solution of the problem depended more upon the wisdom displayed at Pretoria than in London.

THE St. Petersburg *Bourse Gazette* demands a free passage of the Dardanelles for Russian ships alone, and also the abrogation of the Treaty of 1840.

THE Blackburn Chamber of Commerce has offered to raise a famine fund for India. Lord Gessge Hamilton has tendered his best thanks, and says he awaits advices from India before appealing to the public.

THE Italian Consul, Signor Ceechi, and the captains of the Italian warships Volterno and Staffetta, besides six other officers, have all been killed by Somalis at Magadoxo, and a hundred men wounded. A telegram from Zanzibar regarding the disaster to the Italians states that they went for an excursion outside Magadoxo escorted by seventy Askaris, and that all the whites of the party were massacred by the natives.

THE Alexandria Court of Appeal has condemned the Egyptian Government to refund the half million used for the Dongola campaign and pay all costs. The newspapers in discussing the decision concur in the opinion that it will strengthen the British position in Egypt and prolong the occupation, and that if England pays the amount in dispute she has a right to Dongola rather than Egypt. The French Press say that the decision of the Alexandria Appeal Court is a rebuff to England and a triumph for France, and declare that financial helps to Egypt will give Britain no mortgage rights. An agreement has been concluded between France and Russia during the last few days for the representation of Russia in the Council of the Ottoman debt.

THE Viceroy still holds out. He is not yet prepared to say that there is famine in the land. At Baroda, he thus spoke on the 28th November:—

"There is one circumstance to which I should like to direct attention. I have had before me the figures of the rainfall during this last disturbance. It is somewhat remarkable that that storm has visited the parts of the country where it was most wanted. It has visited the Deccan. It has passed through the Central Provinces; it has been felt in the North-Western Provinces; it has penetrated to the Patna Division in Bengal; and I hope and believe also that rain has extended far enough north, in the Madras Presidency to reach the most affected districts in that province. Even in the Punjab which I would willingly have included in my list, I know that rain has fallen in the division of Delhi where I saw with my own eyes the necessity for it (applause). Now the circumstances to which I would direct your attention is this, that though the rainfall has not been uniform, and though I daresay there are few if any districts which would not be able to say that they would be glad to have more and others in which the fall has been slight, still the reports which have reached me are uniform in one respect, and that is, that they all say that the prospects of the *rabi* crop are materially improved, and that the area which will be sown will almost certainly be increased (applause). Now I have spoken with sobriety of judgment in the circumstances of the moment, and I should be the last man to wish to appear oversanguine and I will admit that the rain which has fallen, timely and beneficial though it has been, has not swept away all our anxieties or removed the necessity for measures of relief. The Government is ready as regards measures of relief, and I know that your Highness and the Chiefs of Rajputana are ready also (applause.) But I am bound to say that this has strengthened my belief in the sufficiency of the supplies of food available to meet the necessity. I was always myself sceptical as to the deficiency, but now that the *rabi* crop with normal conditions during the next two months is fairly assured, I venture to say that any doubts may vanish, and it is perhaps not inopportune that I should mention this here in the great city of Baroda, because I am well aware that it is the inhabitants of the great cities that have most felt the pinch of high prices, and I hope and believe that they will soon share in the opinion which I have just expressed. (Applause)."

THE following is the official comparative statements of food grains, in Bengal :

Ballia	"		"	

THE information supplied by the Director of Land Records and published in our last number, differs materially from the statement supplied by Mr. Finucane. The price of common rice in most of the districts is not lower than 8 or 9 seers per rupee. In Bankura, Midnapore, Murshidabad, Patna, Darbhanga, Bhagalpore, Purnea, Malda, the Sonthal Parganas, Cuttack, Balasore, Puri, Manbhum and Singhbhum it is above 10 seers. In Orissa generally the supply is of such a kind as not to raise apprehensions of famine. In Behar great difference is found in the comparative prices of 1895 and 1896. It is half as regards rice and nearly as much regarding wheat.

IN Bengal, the famine price is prevailing in most of the districts. The only hopeful sign is the average outturn of rice is calculated at half, though in the districts of Jessore and Nadia it is different.

THE total stock of rice in and around Calcutta at the end of November last, was twelve lakhs maunds, from which two lakhs have to be deducted for probable exportation.

THE total quantity of rice and paddy imported into Calcutta from foreign and Indian ports in 1895 was 9 lakhs maunds. In 1896 it is 24 lakhs.

OUR correspondent in the Balasore district reports that cattle disease has broken out in Verah, and the people are living on one scanty meal a day. He remarks—"This in November and December! No body can say what is in store for them in July and August next."

TEN DAYS' experience of Dr. C. Banks, in temporary (3 months) charge of the conservancy branch of the Health Department of the Calcutta Corporation, gained in "what are reputed to be the dirtiest, most overcrowded and unhealthy wards," writes he, "justifies me in pronouncing these wards abnormally filthy." "It would require," he continues, "stronger language than is to be found in the Encyclopædia Britannica to convey anything like a correct idea of the appalling state of matters." He is so appalled by the filthiness of the town that "if my services were placed at their (the Commissioners') disposal for the next 20 years I should not be able in that time, with a mint of money at my back, to bring the chaotic condition of affairs into anything like order." We hope, if permanently appointed he will commit no suicide. He is specially tempted to make the remark by "the terrible overcrowding of human dwellings and the resulting evils thereof." According to him, to improve the sanitary condition of Calcutta and the amalgamated area, special attention should be directed to pulling down insanitary and building sanitary houses, constructing drains, widening streets and lanes and introducing a plentiful supply of water. He also finds that the supervision of the conservancy establishment "has been seriously neglected." The suggestions, which if acted upon, will, in his opinion, do a great deal of good, are :—

1. The hours for depositing house refuse or rubbish in streets and lanes should be restricted.
2. Pucka pavements should be constructed around all hydrants.
3. Hackney carriage stands should be made pucka, provided with surface drains, and flushed at least twice daily.
4. Every gully-pit in the town should be at once thoroughly cleaned (and disinfected as far as possible), special carts and an adequate establishment being employed for the purpose.
5. Better platform arrangements for the removal of street sweepings are absolutely necessary. The present system results in a most serious waste of time and money, and accounts for the dirty state of the streets late in the forenoon. At present these platforms are a public nuisance.
6. Building regulations are urgently required. Advice may be meanwhile given to the owners and occupiers, or both, of grain godowns and such like places in which food stuffs are stored, not to allow human beings to occupy such buildings. This is a most important point which was suggested to me by Mr. N. N. Ghose, a Municipal Commissioner.
7. A general notice should be issued to the owners of stables and gowkhanas to provide pucka floors and drains connecting the main drains, and insisting upon the washing of their carriages in their own premises and not in the streets. The condition of these places is disgraceful.
8. Body spouts should be prohibited unless connected with the drains. Such nuisances should not be tolerated. In visiting narrow lanes, one never knows when one may be drenched with the foul discharges from these primitive domestic conveniences.

10. There are numerous houses which should be certified uninhabitable until thoroughly cleaned outside and inside, disinfected and ventilated, as far as it is possible to do so. This certainly would facilitate the attempts that are being made to make them habitable.

10. A Lodging-house Act should be introduced. I understand no such Act is in force.

11. Night-soil depots situated in thickly populated parts of the city should be removed.

12. Means should be provided whereby narrow lanes might be flushed with the aid of a hose; that is to say, there should be abundant supply of water.

13. Drop privies should be abolished.

14. Drainage extension, open squares in crowded localities, and the widening of streets and lanes.

WE give a prominent place to the letter of Dr. Jelovitz on the Bombay plague. As the disease is proving obstinate, it is time to have recourse to other than ordinary methods to meet it successfully. Already, there is a cry in Bombay for the distant Dr. Yersin and the anti-plague serum which he is telegraphed to have discovered. Dr. Jelovitz suggests a remedy ready at hand and the cost of which Bombay will not probably grudge, seeing how freely it has been expending money not only in its own interests but the interests of other cities, finding itself shunned by the rest of the world. We do not see any absurdity in Dr. Jelovitz's suggestion. There are diseases in which an even temperature is prescribed for sick rooms. There are, again, hot houses. Why not then hot buildings? If the raising of the temperature may lead to the raising of the siege by plague, why not take to it?

"STR.—The morning papers inform us by telegrams from Bombay of the increase in the number of daily cases of bubonic plague. I am not at all surprised at the increase which will perhaps continue as the temperature of the atmosphere falls. This remark, among others, I made at the last adjourned meeting of the Bombay Medical Union. I remember having given a hint to that effect, knowing from my personal experience, affirmed by many known writers, that an epidemic of bubonic plague reaches its maximum when the temperature of the atmosphere is 55 to 60°F. and diminishes *par passu* with the rise of the temperature and ultimately disappears at a temperature of from 100 to 110°F., re-appearing, when precautions are not taken, as the thermometer falls. The present state of the Bombay epidemic verifies my observation in other parts of the world. With a shower of rain a few days ago, necessarily reducing the temperature, the number of attacks increased and it went down with reaction in the air, namely, with warmer atmosphere. This theory may be opposed to popular notion. Indeed, one of the speakers at the first meeting of the Bombay Medical Union freely gave out his belief that a shower of rain would cause the disease to disappear from Bombay. During the epidemic in Turkish Arabia, where I was then residing, plague shewed itself at the latter end of February, when the thermometer rises from nearly the freezing point, gradually increased in virulence and reached its intensity in March and April. It began to abate in the latter half of April and disappeared in the middle of May, when the thermometer indicates a temperature of 110 to 115°F.

Now the question arises how shall this disease be stamped out from Bombay, where the temperature does not exceed 95 to 98°F? Will it never disappear? I am afraid not, unless extraordinary measures are resorted to. The measures taken by the health department of the Municipality of the city of Bombay are in themselves not sufficient, and the class of people who are usually attacked do not, because they know not how to, help the executive in their attempts to drive out the disease. I would suggest artificial heat to be introduced into the infected houses and quarters. In the former this can be done by laying down and carrying through every room, iron pipes through which hot air can be passed, thereby increasing the temperature *ad libitum*. This is to be continued for at least one month or six weeks; at the same time, once every three days the floors of each room are to be washed with hot water. It would be better perhaps if the hot water were mixed with perchloride of mercury (1 in 5,000) as suggested by the Medical Board, for this city, appointed by the Bengal Government. My suggestion may appear startling, but to the knowing it is not so ridiculous. A trial at any rate cannot do any harm until more effective means can be found for stamping out this dire disease which has already claimed victims by hundreds.

Hotel Continental,
Calcutta, Dec. 5."

M. L. JELOVITZ, M.D.

Today's telegraphic report from Bombay seems to confirm Dr. Jelovitz. There is a large increase in the number of attacks and deaths. Plague has also spread to other quarters. The Health Department, we are told, want to try the experiment of removing a portion of the tiles from the roofs of houses to let in the sun.

THE Lieutenant Governor will hold a Durbar at Belvedere, at 4-30 P.M., on Tuesday, the 8th December, 1896, "for the investiture of certain gentlemen on whom Titles have been conferred by His Excellency the Viceroy and Governor-General of India." "Full Dress for gentlemen entitled to wear uniform and Morning Dress for others." Morning dress for Darbars is a recent innovation and is not calculated to preserve the grandeur and solemnity of the occasion. It is, however, in keeping with the indiscriminate bestowal of Indian titles. In the cards of invitation issued, we observe another omission. They give the block and the seat number but no plan (on the back) of the Durbar Hall.

The gentlemen to be invested are:—

Maharaja Gobind Lal Ray, of Rangpur.

Raja Shashi Shakharewar Roy Bahadur, of Tahirpur in Rajshahi.

Shams-ul-Ulama Maulavi Zulfiqar Ali, of Calcutta.

Khandkhar Fazal-I-Rabbi Khan Bahadur, of Murshidabad.

Rai Ram Okhoy Chatterjee Bahadur, of Calcutta.

Rai Sarat Chunder Das Bahadur, C.I.E., Tibetan Translator to Govt.

Maulavi Badruddin Haidar Khan Bahadur, of Calcutta.

Rai Hari Ballabh Bose Bahadur, Government Pleader, Cuttack.

Rai Anand Chander Sen Bahadur, of Dacca.

WITHIN a fortnight of Mr. Manomohan Ghose's death, his favourite niece, Pramila, who had been ailing for months, died. Although not more than 24 years of age, yet she had made herself a name as the writer of *Pramila* and *Talini*. Her verses wrung admiration from all classes of readers. Commencing her literary career at the early age of 13, she had early enough, before she was 20, won her fame. A constant contributor to the vernacular press, especially to the well-known magazines, she has left a number of manuscripts which she could not complete on account of her continued illness. She was a good specimen of a Hindu lady, with an amiable disposition and pleasing address. She had the advantage of seeing English life in India in the house of her late uncle, Mr. Ghose. Mr. Ghose was very anxious for her life. He saw her before his last visit to Krishnagur and when himself dying enquired how she was and wanted to see her. In his last visit to her, by way of consolation, he impressed on her that man is mortal, that sooner or later all must die, and that he himself was prepared to meet death at any moment.

THE gaieties at Baroda during the viceregal visit were marred by a very painful accident. In the rush of the crowd that had gathered to witness the fireworks, 29 persons lost their lives. The subsequent entertainments were abandoned and Lord Elgin, while opening the new court buildings on the 30th November, alluded in feeling terms to the catastrophe, thus:—

"Your Highness,—Before I proceed to carry out your wishes and to declare this building open, I desire, with your permission, to take this the last public opportunity which I shall have in this city to express my sympathy with your Highness and with the citizens of Baroda at the sad and untoward accident which was the only blot upon the successful proceedings of Saturday. It so happened that I did not pass through the gardens in the late evening, and therefore I was unaware of what had happened till yesterday morning, but I had passed through the gardens several times earlier in the day, and I had mentioned to your Highness and to others my wonder not only at the size of the crowd, but at the happy and orderly manner in which they were evidently enjoying the various entertainments which your Highness' kindness had provided for them. I am sure it must be a deep grief that one of those sudden movements to which large crowds of this kind are notoriously liable should have brought about so sad a result, but it is not for me now to examine into the causes. I have only to express what I am sure must have been the first feeling of everyone when they heard the news, the deep concern and grief which we all feel for the victims themselves and for their families and dependants. (Hear, hear.) I know that was the feeling which was present to your Highness yourself, because you were good enough to pay me a visit almost immediately after you received the news; and I know that your first thought was to visit the sufferers in the hospital and to make such enquiries as would enable you to make proper provision for the families of those who, alas, are themselves beyond human aid. I should have wished to have shared in that good work, but as your Highness desires to take it upon yourself I have only to express my deep sympathy with you and my sense of the kind and charitable feelings which have animated your heart. (Hear, hear.)"

THE Evening Party, on Monday, at Maharaja Jotendra Mohun Tagore's was the occasion for the second appearance of Mr. Ronald Smedley before a native audience in a native private residence. Mr. Smedley is not only a reciter but a bit of an actor as well, but nothing like Birch or Locke Richardson. The first excelled them all. He would, in the twinkling of an eye, change his dress to suit the part he recited. Locke Richardson, without change of dress, would act many parts in quick succession suiting his voice and manner to the character assumed. Mr. Smedley did the comic parts capitally. In the serious portion of his programme he was not so successful. The recitation of Freedom from Nesbit's Story of a Hungarian Hero was not sufficiently stirring. We had better reading of Mark Antony's speech in Shakespeare's Julius Cæsar. The Battle of Waterloo from Byron did not impress us much. Hamlet's soliloquies fell flat. In his anecdotes Mr. Smedley shewed his cleverness especially to the disparagement of foreigners, not excepting his own German professor. Dickens' Sergeant Buz Fuz's address to the Jury was splendid. Whether he could successfully present to his hearers the nameless advocate whom he wanted to caricature we cannot say, but he took them, among whom were many lawyers, with him. He concluded with the Trial Scene from the Merchant of Venice, which was indeed a treat. He was perhaps more than ordinarily harsh on the old Jew.

REIS & RAYYET.

Saturday, December 5, 1896.

THE CRISIS IN THE CALCUTTA CORPORATION.

PLAGUE on the Municipal Commissioners ! Such is the verdict of the head of the Bengal Government on a body of men who are preparing to meet the threatened danger from Bombay. Hitherto Sir Alexander Mackenzie had received all representations on the subject of plague with caution. He had refused to precipitate himself into any ill-considered action in consequence of the hysterical shrieks of the Health Officer. No sooner he was in Calcutta than he smelt a dead rat and grew loudly delirious from the stench of the new sewers to be constructed and of which he laid the foundation stone on the 26th of November. He utilised the occasion by denouncing the Commissioners in no measured terms, for supporting of the executive, specially the Health Officer who has lost the confidence of his masters and whom they would like to get rid of. He found fault with the constitution of the Municipality, with the members, and with the method of their working, and threatened them with extinction unless they prove themselves better, that is, amenable to the whims of their executive and unless, above all, they let their Health Officer alone.

Dr. Simpson has been found to be an alarmist by the Medical Board, as he has been found wanting by his masters. All the cases reported by him have been pronounced to be not of plague. Regarding the earlier ones, the Medical Board say :—

"Six cases of fever accompanied with swelling of lymphatic glands have been reported to the Board up to date, and they are of opinion that there are at present no grounds for believing any of these to be cases of true bubonic plague."

Later on, while making their final deliverance on the 11 cases reported, they say :—

"In the cases marked with an asterisk, (numbering 5) the plague bacillus is said to have been found in the blood of the persons attacked. Three others were found to be cases of simple enlarged glands, fever and bronchitis, and intestinal obstruction, respectively. The result of the examination of the blood of the two cases in the Presidency General Hospital is not known to us. As a full history of all these eleven cases is contained in the appendix to this report, it is not necessary to recapitulate them here, and a summary of the conclusions drawn from these will, therefore, be sufficient in this place.

The bacillus is also said to have been identified in the case in Raja Raj Bullub Street which terminated fatally. This case was first reported by a homœopathic practitioner to the Health Officer of Calcutta by post card on the evening of the 2nd November; it was seen by Drs. Cobb and Simpson on the 3rd at 5-30 P.M., and the man died in their presence at 6-30 the same evening. They reported it 'as a fatal case of true plague.' The Board of Health did not hear of this case till the following day, after the body had been disposed of, and then only from private information. An interval of nearly 20 hours occurred between the time the case was first seen by the homœopathic practitioner and the time it was inspected by Drs. Cobb and Simpson. It is to be regretted that Drs. Cobb and Simpson did not call in one of the medical members

The Indian Association for the Cultivation of Science.

Lecture by Babu Ram Chandra Datta, F.C.S., Monday, the 7th Dec., at 4-15 P.M. Subject: Carbonic anhydride and Carbonates.

Lecture by Babu Ram Chandra Datta, F.C.S., Tuesday the 8th Dec., at 4-15 P.M. Subject: Sulphur and Sulphuretted Hydrogen.

Lecture by Babu Rajendra Nath Chatterjee, M.A., Wednesday, the 9th Dec., at 6 P.M. Subject: Force and Motion (concluded.) Laws of falling bodies—Atwood's Machine.

Lecture by Babu Ram Chandra Datta, F.C.S., Thursday, the 10th Dec., at 4-15 P.M. Subject: Oxides and Oxy-acids of Sulphur.

Lecture by Dr. D. N. Chatterjee, B.A., M.B., C.M., Thursday, the 10th Dec., at 5-15 P.M. Subject: Circulation.

Lecture by Babu Ram Chandra Datta, F.C.S., Friday, the 11th Dec., at 4-15 P.M. Subject: Oxy-acids of Sulphur (concluded.) Bi-sulphide of Carbon.

Lecture by Babu Ram Chandra Datta, F.C.S., Saturday, the 12th Dec., at 3 P.M. Subject: Phosphorus and its compounds with Hydrogen and Oxygen.

Lecture by Babu Girish Chandra Bose, M.A., F.C.S., M.R.A.S., &c. Saturday, the 12th Dec., at 4-30 P.M. Subject: Histology of Plants—A Cell.

Lecture by Dr. Nilratan Sirkar, M.A., M.D., Saturday, the 12th Dec., at 6 P.M. Subject: Histology—Nerve.

of the Board, who would have been only too willing to go and see 'a true case of plague.' The omission is the more unfortunate, because doubt had arisen in the public mind regarding the diagnosis of the previous cases. Drs. Dyson and Robson-Scott, however, as soon as they heard of the case, proceeded to the spot and made minute enquiries concerning it, with the result that it was clear that other reasons existed for the enlargement of the glands in the groin, which was reported to be one of the prominent features of the case.

The most noticeable point in the suspicious cases that have occurred is the fact that all the patients in whose blood the plague germ is said to have been found recovered, with the single exception of the case in Raja Raj Bullub Street, and in this case, as already stated, the symptoms noticed can reasonably be ascribed to other causes. Another remarkable fact is that none of these six sporadic suspicious cases produced any infection either in the neighbourhood or even among the people who attended the sick.

Looking only to the clinical symptoms set forth in the appendix to this report, we have no hesitation in expressing our emphatic opinion that none of these cases including the fatal case of Bipin Behari Dutt, can properly be described as a case of bubonic plague. It may be inferred, however, from the reports which have come before us, that the diagnosis made by the Health Officer and Dr. Cobb is based not so much upon the symptoms of the patients, as upon the supposed presence in their blood of a microscopic organism stated to be 'the plague bacillus.'

They conclude :—

"Looking to the evidence as a whole, we have no hesitation in expressing our opinion that there is no evidence that any case of true bubonic plague has yet occurred in Calcutta; and that the cases which have been reported to us as plague were so described on the strength of an opinion as to the origin and character of certain microscopic organisms which has not been confirmed by the results of an independent inquiry conducted by an expert of long experience in bacteriological research."

This is complete distrust of the Health Officer and his ways, as plainly expressed as sober official language can do. But Dr. Simpson sees not the condemnation. He does not feel the sting. He is evidently more thick-skinned than people generally are. The Board consist of men that are gentlemen. They could not perform a surgical operation for rousing Dr. Simpson's sensibilities. The fact of his sticking to his place notwithstanding the displeasure of his masters and his condemnation by the Medical Board, carries with it its own tale. He prides himself as an expert in the manipulation of the microscope. He is now declared to be no bacteriologist and, according to the statement of his new assistant, he has grossly neglected the supervision of an important work of his own department. It is a wonder, therefore, how he can still retain his position and a greater wonder how he has found a supporter in the Lieutenant-Governor who falls foul of the Commissioners for his lapses. This is only a proof of the utter helplessness of the Commissioners whom a breath can unmake as a breath has made. In fact, they have been seriously hampered in dealing with their Health Officer. He may very well defy them in the security of gubernatorial favour. The Governor, while chastising the Commissioners for the filthiness of the town, hesitates not to hold out an inducement to insubordination in a servant. Mr. James Kimber, the late Engineer to the Corporation, had, in the same way, been the means of bringing the Commissioners to grief. The Cunningham-Commission, presided over by Mr. Justice Beverley, has been repeated, in the interest of the Health Officer, in a form that will not end as that Commission had ended. The present movement is more systematic and thorough and has the ring of an Alexanderine, needless or needful, we do not enquire in the present article.

The present régime in Bengal, as regards the Calcutta Corporation, is that of Sir Ashley Eden and Sir Rivers Thompson and not of Sir Richard Temple who gave the present constitution. Sir Alexander

Mackenzie accepts Sir Ashley Eden, under whom he had acted, as his model in the art of government, and, following him, has commenced his attack on local self-government in Calcutta. Sir Ashley Eden was of opinion that local self-government is a sickly plant even in its native soil. Then Dr. Payne was supreme in the Corporation, though he was only a servant, and now Dr. Simpson rides over his legitimate masters. Sir Richard Temple was a fool to grant the present elective municipality. He was no better in other departments of the Bengal Secretariat. His favourites there have, therefore, been sent away. The Thompson's raid saved the then Engineer of the Corporation, who, afterwards in conjunction with the Chairman, turned on his deliverers and accomplished strange feats to cover past neglect of the drains and sewers. The Chairman did not throw the Commissioners overboard but carried on a mighty contest, aided by his friend, the present Chief Commissioner of Assam, with the Lieutenant-Governor and vindicated the Municipality with a vigour of reasoning of which he alone was capable.

Twelve years after, the Municipality has been taken up again for a sharp handling. The town is not what it was. Improvements, on a large scale, have been made in every direction. It is difficult to identify many neighbourhoods. Progress has been steady. The municipal income has gone up by leaps and bounds. The largest part of that income has been every year devoted to the cause of improvements. Hundreds of open drains have been filled up. Dozens of bustees have been cleared. Many new roads and streets have been opened. The conservancy has been vastly improved. Water connections have been extended. The value of landed property in the town has increased. Instead of thanking the Commissioners for what they have done, they are censured for what they have not done. Sir Alexander Mackenzie is an experienced administrator. And yet he has shown a regrettable lack of experience in thus indulging in a diatribe against those who are entitled to his best thanks. Time is a factor in every question of improvement. They who ignore this, must be regarded as ignorant, indeed, of the ways of humanity. Hysterical shrieks inspired by alarm are unmanly and unstatesmanlike. Rulers should not act like old women. They must take note of what is impossible. Sir Alexander Mackenzie, with the cleverest Secretary at his elbow, and with ten times the present income of the Corporation, will not succeed in making Calcutta a perfect town within even twenty years to come.

It is a consolation to think that Sir Alexander Mackenzie does not mean what he says—such, at least, is the interpretation put on his speech at Entally by a native daily edited by one of the loudest of Commissioners who had loudly complained of it. Mr. Risley, Secretary to the Bengal Government and President of the Medical Board, who is not usually courteous and communicative, who, while receiving presents from a stranger, always forgets to acknowledge them, specially if the stranger happens to be a native, who ignores the native without thinking it beneath his dignity to apply to the native press for literary commissions, has been prompt in making the bitter pill less bitter, if not sweet. Here is his balm. As Secretary to the Bengal Government he writes to the Medical Board of which he is the President:

"I am directed to acknowledge the receipt of the letter of the Medical Board, of yesterday's date, submitting the report of the five

Sanitary Officers and the Civil Surgeon of the 24-Parganas upon the results of the sanitary survey of Calcutta and the added area, made under the directions of the Board. The Lieutenant-Governor entirely agrees with the Board, and has already publicly declared, that the state of things disclosed constitutes a standing menace to the health of the city, and indicates a lamentable failure on the part of those responsible for the town conservancy. The Lieutenant-Governor would be glad if the Medical Board would make a full and searching enquiry into the causes of this failure, and report the result to Government. His Honour feels sure that the propriety and, indeed, the necessity of such an impartial enquiry will be generally admitted. The Lieutenant-Governor has complete confidence that the Corporation, both through its executive and collectively, will give every assistance to the Board in arriving at a correct conclusion, and will face the task of cleansing the town with a firm determination to allow nothing to come in the way of this.

2. The Lieutenant-Governor has himself an entirely open mind on the question of responsibility. It is a mistake to suppose that in his speech at the initiation of the drainage works, he intended to declare that the executive of the Corporation was blameless in the matter of the sanitary and other shortcomings of the city, and that the general body of Commissioners was alone to blame. For the state of some departments, such as the Warrant Department, there can be little doubt that the executive is largely responsible. It was His Honour's intention to stir up the Commissioners to take vigorous action to remedy the gross evils brought to light by the sanitary reports, and to point out various matters which in his judgment called for scrutiny and reform, but he carefully refrained from deciding to whom or to what feature in the municipal arrangements the blame is to be imputed for particular shortcomings. The Lieutenant-Governor considers (and said) that the constitution of the Municipality is not in itself calculated to promote the rapid disposal of work or to fix responsibility; that there has been at times undue interference with the executive, which ought, in a city like Calcutta, to be strong and well organised; and that there has been great remissness in working the existing building regulations. Sir Alexander Mackenzie believes that his views on these points have been held by every Lieutenant-Governor since the Corporation came into existence. But the questions before it and the Government at the present time are eminently practical, viz., what steps are necessary to remedy the existing foul state of the city and to prevent its recurrence. On these points the Lieutenant-Governor desires to have the advice of the Medical Board before he addresses the Corporation.

3. He understands that the Medical Board have themselves addressed the Corporation regarding the measures detailed in their letter, which ought, in their opinion, to be taken in hand at once. The Lieutenant-Governor trusts that the Corporation will respond promptly and heartily to the Board's suggestions, and insist on effect being given to them.

4. The Board should apply to the Corporation direct for copies of the regulations on house-connections, and for any other information which they may require."

Thus Mr. Risley raises his magic wand to calm the tempest raised by his chief. His interference seems to have softened to a degree the outraged susceptibilities of the Commissioners. At any rate, they are in no hurry to make their protest. The above is as complete a retraction as possible of the censures hurled forth on the 26th of November. "A full and searching enquiry into the causes of the failure," it is frankly admitted, has not yet been made. Till such an enquiry is completed, there can be no apportionment of praise or blame. Sir Alexander Mackenzie did not intend to castigate the Commissioners. Poor souls! if they thought so, they were mistaken. He was only "stirring" them up. It was only a crack of the whip and nothing more. If anybody was hurt and blood was drawn, he should take it as an unfortunate accident, for the intention to strike was totally absent.

OUR LONDON LETTER.

October 26.

When the mail closed on Friday evening, the 23rd instant, I purposely refrained from even mentioning the extraordinary case of the Chinese Doctor, Sun Yat Sen. That such a case was possible in the capital of the world seemed to be incredible. I am afraid we will not know the full details until Parliament meets. One thing seems clear. The doctor belonged to a secret society, very much apparently on the lines of the Nihilists in Russia. These Chinamen wished to overthrow the present dynasty. The plot was revealed, no doubt by one of themselves, as almost invariably happens, and sixteen of the comrades of Sun Yat Sen

lost their heads. He managed to escape to America, and eventually found his way over here. He may be a born conspirator and an eminent physician, but he must be singularly wanting in that most uncommon of all attributes--common sense. The very last place he should have gone to was the Chinese Embassy in Portland Place. But he appears to have courted persecution, by going ostentatiously to the Embassy. When his friend Dr. Cantlie applied to the Vacation Judge in Chambers for a writ of "habeas corpus" (what the immortal Sam Weller called "have his carcass") the Judge properly refused to issue the writ, remarking that the High Court had no power to interfere with the doings of an Ambassador. There was only one resource left, to appeal to the Executive Government in the person of Lord Salisbury. As soon as he heard of it, he put his foot down and negotiations were carried on with Sir Halliday Macartney. This last is a distinguished member of our diplomatic service. But in this instance he seems to have lost his head. The matter was no doubt complicated by the unfortunate condition of the Chinese Ambassador. He went down to Southampton to say adieu to Li-Hung Chang, was seized with paralysis, and since then has been lying between life and death. Lord Salisbury apparently insisted on the immediate and unconditional surrender of Sun Yat Sen, and so he was made free.

The Royal Academy, as the cable will have informed you, has elected Mr. E. J. Poynter to succeed Sir J. Millais, as President. The "Times" has nothing to say against Mr. Poynter, beyond the fact of his being Director of the National Gallery, and asks "whether those duties are not too exacting to be properly performed in conjunction with the duties of President of the Royal Academy?" It points out only once, more than forty years ago, were both offices conjoined in the person of Sir Charles Eastlake. But in 1850 our National Gallery was only of second rank. Now "it is comparable with the Louvre and with Dresden, and far superior in all round excellence to the Galleries of Vienna, Munich and Berlin."

Nov. 6.

Great Britain. We are in all the throes and agonies of the interminable education question. You will remember it was on this question the Government came to such a melancholy fiasco in the last session of Parliament. Voluntary Schools versus Board Schools, the former representing the Churches of Rome and England, the latter, the Non-conformists, Secularists and all who hold aloof from churches in general. Day after day, the "Times" has several columns devoted to the lusty combatants, one whole column yesterday being given up to Sir H. Howarth. It is impossible to read the trash, even if one had time, and then English Churchmen are divided on the question as to State aid or Rate aid. That is, shall the assistance be from the State under the supervision of the Education Department or shall it be from the local rates without any supervision at all? The position has been farther complicated by the prominent position taken in the controversy by Lord Salisbury's two sons, Viscount Cranborne and Lord Hugh Cecil, who are violent opponents of State aid. It is assumed they would not take upon themselves the prominence they have, unless with at least the tacit assent of their distinguished father. But the "Times" in a leading article yesterday, rebuts this conclusion. The "Times" writes:

"It is reasonable to suppose that the opposing schools of thought are represented within the Cabinet, which, however, is under a necessity to decide upon some course of action, which does not seem to be imperatively felt by outside disputants. Sir Michael Hicks Beach and Lord George Hamilton have indicated very clearly the enormous difficulties which, in their opinion, beset any scheme for assisting voluntary schools out of the rates, but they are not, of course, to be understood as having in any way fettered the discretion of the Cabinet as a whole, however certain it may be that they are the spokesmen of a large and influential section. On the other hand, the public, always keen to note indications of the opinions held by responsible Ministers, must be warned against what would be the very natural mistake of supposing that they have gained from communications that have appeared in our columns authentic information concerning the opinions of the Prime Minister. Statesmen differ widely in their methods, and it must not be inferred from a recent and conspicuous precedent that the son of a Prime Minister is necessarily his alter ego or even an authentic exponent of the general drift of his policy. It would be particularly unfortunate were the Convocation of the two Provinces, who hold their joint meeting to-day, to assume that the opinions expressed by Lord Cranborne and Lord Hugh Cecil are those of their distinguished father. Both have a marked individuality of their own, which would probably have sufficed to put all men on their guard against such a mistake, were it not for the precedent just referred to. But as things stand it may be useful to issue a warning which is of general application and by no means confined in its scope to the question now under discussion."

But yesterday afternoon a conference was held, at the Church House, Westminster, of members of the Convocation and of the Houses of Laymen when a resolution in favour of Rate aid was carried enthusiastically.

Earl Cranbrook (the famous Gathorne Hardy of the Irish Church debate) and Lord Cross earnestly protested in favour of State aid. Whereupon the Heir of Hatfield had the bad taste to sneer at "the old fashioned conservatism of the two previous speakers." This young lord appears to be as great a master of "jibes and flauts and sneers" as Mr. Disraeli alleged in the House of Commons his father was. But the best joke of the meeting was the Bishop of Manchester. His friends had been touting to secure for him the See of London. He is evidently terribly chagrined at having been passed over, and is determined to give the Government as much trouble as possible. It is a pretty seemly quarrel as it stands for these Right Reverend Fathers in God! Personally I hope most of the Prelates will follow Dr. Moorhouse. The separation of Church from the State will then be within "measurable distance."

Lord Rosebery's memorable pronouncement at Edinburgh has apparently given a deathblow to the fanatical agitation about Armenia. But the inevitable H. P. Hughes was determined to have the last word. So in his paper the "Methodist Times" he declares Lord Rosebery's resignation was due neither to Mr. Gladstone nor to Sir W. Harcourt, but to the uprising of the "Non-conformist conscience," because of his Lordship having refused to abandon the turf! Hughes writes: "Lord Rosebery ignored the 'non-conformist conscience' for the sake of a race horse, and the whole world sees the result." The "Scotsman" replies vigorously:

"Lord Rosebery ignored the nonconformist conscience for the sake of a race horse, and the whole world sees the result.' Was ever more arrant cant and humbug uttered by a minister of the Gospel? Does any sane man believe that at the time of Lord Rosebery's accession to the Premiership, the nonconformists were not just as well aware of his connection with the turf as, say, Mr. Gladstone, who recommended him, and as the majority of intelligent people in the country? Does any one believe that if Lord Rosebery had never won a Derby, but had only taken a secondary place with his horses, a word would have been heard from the nonconformist conscience, and those who profess themselves its keepers? But even if we waive these points it is surely ridiculous to connect Lord Rosebery's present position with his countenance of horse-racing. The nonconformists would have gone on supporting him and voting for him if he had chosen to remain Premier. It pleases Mr. Price Hughes to represent Lord Rosebery as having 'fallen from the great position he occupied in the country.' He has not fallen. He has stepped out of bad company in which may be included the spokesman of that hypocritical figment, the nonconformist conscience. As for position, nothing is more certain than that Lord Rosebery has, by his manlike stand upon the Armenian question and his refusal to sacrifice national issues to party exigencies, gained for himself in all classes, favourable or hostile, a reputation for statesmanship, which he never enjoyed."

Professor Johnston has, I am glad to see, determined to appeal to the Privy Council. That a man may be a very learned scholar, and yet a most inefficient teacher I know by my own experience. I was a pupil of one of the greatest Greek scholars of his day but the most inefficient of Professors, save only to his senior class. The difference between him and Professor Johnston lay in this. No rowdy student, Divinity or otherwise, would have dared to take any liberty with him.

To show the difficulty of any earnest mind knowing what to believe in these days, I quote two criticisms on the much vaunted "Ian Maclaren" alias the Presbyterian Dr. Watson of Liverpool.

First from the London "Presbyterian":—"The Rev. Dr. Watson's American Critics."--Dr. Watson's recent book, "The Mind of the Master," is running the gauntlet of some severe comments from Presbyterian critics in America. There is quite a scathing review of it in the "Presbyterian and Reformed Review"; and the "South-Western Presbyterian" comments as follows:—"Although, in common with his host of readers in two hemispheres, we alternately laughed and cried over 'Bonnie Brier Bush,' we were quick to discern a subtle poison diffused through it, only as a faint tincture, but coming to a stronger solution in later tales. In this book there is no concealment, but boldest avowal of beliefs, which, if he is an honest man, dictate his withdrawal from the Presbyterian Church, if in England it still holds to a genuine subscription to the Westminster Confession of Faith. It is a pity for the permanency of his own reputation, to say the least, that he should have been tempted to seize the occasion of a world-wide audience to publish his heretical crudities. If he had simply consulted Cruden he would not have committed some of the most patent blunders about the teachings of Christ and His apostles, pointed out by his critics. Suffice it to say, he denies the doctrine of the Atonement as understood by the true Church of God in the days of Paul, Augustine, Calvin, the Westminster Assembly, the Hodges and Alexanders, and the great body of Christians now in the world."

Now from the "British Weekly":

"No American paper has published a happier criticism of Ian

Maclaren than the *New York Tribune*. Of his first lecture in that city the writer says, "It took the form of a familiar commentary upon his stories, and in the course of that commentary the speaker manifested at once a profound knowledge of human nature, a lovely spirit of tender human sympathy, a thoroughly noble ideal of conduct, a broad mind, a most engaging whimsicality of temperament, and a complete command of absolute simplicity in his style of expression. His humour is playful. He knows the value of the right word, and he can make that value deeply felt by his way of saying it. His innocence of manner is almost demure, and it is irresistibly charming. He spoke extemporaneously, and occasionally with the cadence which is peculiar to orators of the pulpit; but since he is a clergyman, that peculiarity was to be expected. He read a few passages from his writings, and his Scottish pronunciation was perfect music. His voice is remarkably copious, and upon occasion, when deeply moved, he would be capable of impressive oratorical display; but in this lecture he consistently preserved, and with much dexterity and fine effect, that colloquial manner which always seems so easy and which is always so difficult. He had the art to begin with mirth and to close with pathos. His success was unequivocal. The welcome accorded to him by a most intellectual and refined audience was scarcely less delightful than his charming discourse. If such a speaker can traverse this country and everywhere meet with success, that fact will be the happiest of auguries for all that is best in American civilization."

The Primacy. Few people believed Lord Salisbury would appoint Dr. Temple to the primatial See of Canterbury. All admit his intellectual superiority, barring his crazy sad on the liquor question. But he is a man *more suo*. In these days one expects to see in the head of the Church of England a man like his two predecessors on the episcopal throne. It matters little that he be an Erastian like Archibald Campbell Tait, or a wise opportunist like Dr. Benson. But, knowing Lord Salisbury's weakness as belonging to the same school of extreme High Church principles as the illustrious Lord of Hawarden, the very last nominee to the chair of St Augustine should have been Temple. An old friend of the late Cardinal Manning has come to the front, telling us that the late Cardinal was an atheist, like his distinguished brother of Paris, Darbois. Had Lord Beaconsfield nominated Dr. Temple to the See of Canterbury, one would only have laughed at the *droit tracasserie* which allowed "him they call Dizzy" to place at the head of the Church of England one who, so far as the public can judge worships more the almighty sovereign than an honest belief in the resurrection of a risen Lord and Saviour! We of this generation will not know the wheels within wheels which have led to this nomination. Possibly, as Dr Temple is seventy-six years of age, it was felt that looking forward to the great rejoicings of the 20th of June 1897, it was wise and politic to place the Bishop of London on the throne of St. Augustine. An income of £15,000 a year with palaces at Lambeth and Croydon, is not to be sneezed at, and had Lord Salisbury named Archbishop Magee's old wife of a Bishop, he of Lincoln, Dr. King, no one would have been surprised. Lord Salisbury might have gone to the lowest level of the other Church party, and appointed Dr. Ryle, the Bishop of Liverpool. Either Lincoln or Liverpool would have been an anachronism, but not so fatal to the Church of England, as nominating a man like Dr. Temple. I speak with the greatest respect of the working men of London. They know their power. They have seventy votes in the House of Commons and what will those working men say over their Sunday pipe on this great scandal? Fifteen thousand pounds a year with two palaces, at Lambeth and Croydon, appeals to their sense of injustice. They say and say with perfect truth, Dr. Temple was known thirty years ago as one of the seven against the Lord Jesus Christ! No one condemns him for that. He boldly took sides with the late illustrious Head of Balliol College, Oxford, Dr. Jowett, with Baden Powell and Rowland Williams. All honour to Dr. Temple for having the courage to take such a position. But, as Head of the Church of England he is in a false position. The late illustrious Huxley or Tyndall would not have done so much harm as the advancement of this great intellectual power to a commanding position, which, if it means anything at all, implies an avowed belief in the resurrection of what, to Christians, is a term of very dear devotion, "our risen Lord." The late Dean Stanley whittled away all dogmatic truths, save that only. He maintained Christ was the risen Lord and he held out the hand of friendship to all who were willing to make the same acknowledgment. I may be a false prophet, but it does seem to me, the elevation of Dr. Temple is a terrible blow to all our old fashioned (if you like to call them so) ideas, portrayed in the "divine song Milton sang," of a world lost by sin, the inheritance of paradise to be recovered by all who can believe that Jesus Christ was the "risen Lord."

Here you and I part company. I admire and respect your devotion to duty to your countrymen, while I mourn for the sake of all that is good and true in English society, the primatial elevation of a man who has no belief beyond his own aggrandisement! It is a sad day for the Church of England. And to have had the

stab inflicted by one of its most illustrious sons, Lord Salisbury, must be, to all truth-loving children, a very terrible judgment of the One whom, all alike Hindus, Mohammedans and Christians worship as the common and beneficent Father of us all.

Great intellects like Carlyle refused to believe in a risen Saviour and Lord. Other intellects quite as illustrious as Carlyle believed it as divine truth. In that marvellous chapter in "Sartor Resartus," Carlyle, the son of covenanting parent, tells us how on the highway between Gith and Elinburgh, he renounced his ancestral faith. All honour to the man who had the courage to publish his convictions, but no less honour is due to those who accepted the Gospel story as believed in by St. Paul, one or other but not both. David Hume as Archbishop of Canterbury would not be a greater anachronism as Lord Salisbury's nomination of Dr. Temple.

To place on the throne of St. Augustine a man who has deliberately denied his Lord and master, would have been worthy of Benjamin Disraeli, but utterly unworthy of the great Lord of Hatfield. Your illustrious proconsul Lord Dalhousie once said in the General Assembly of the old Scotch Church before 1843 split it up into two parts—"the death knell of the Church of Scotland has been rung," and had that illustrious Scotchman been alive to-day, he would have told Lord Salisbury the "death knell of the Church of England had been rung."

Will any man of ordinary intelligence believe in a Church whose representative head may be placed on a level (possibly lower) with David Hume, John Stuart Mill, and John Morley? But, I must say no more.

Great Britain. The Guildhall Banquet. This was a very brilliant function, and took place, as usual, on Lord Mayor's Day, the 9th of November. The Prime Minister made a great speech which has satisfied all moderate men. Of course the fanatics will be wild. He showed how cordially he is working with France, by giving special praise to M. Hanotaux's great speech to which I have referred under the head of France. He also gave the MacKinley party a pat on the back, and he referred in terms of studied moderation to your friend Abdool Hamid. But, every one can read between the lines his days are numbered. The European concert seems to imply that M. Vambery's friend will be asked to quit, Turkey still being governed through the Sultanate under the supervision of the Great Powers. The Venezuela question too is settled, but of much more importance is the agreement between the Governments of Great Britain and the United States to form a permanent Board of arbitration for the adjustment of all disputes between the two Powers.

I need not trouble you with Mr. Morley's wordy dissertations at Glasgow and at the principal centres of the Montrose burghs for which he sits in the House of Commons. The one good thing he laid stress on was, that the question for the Radical party at present was not one of leadership but how to organize the party, and bring it into line, so that when a leader is selected he will have a band of loyal followers to lead. Lord Kimberly will no doubt take Lord Rosebery's place in the House of Lords, while Sir William Harcourt, supported by Mr. Labouchere, Sir Charles Dilke and the arch obstructive Dalziel, will lead in the Commons. In the sordid game of politics as now played, dirty work is inevitable and no better instrument for such work could Sir William employ than the last named.

The "British Weekly" gives us this prayer in this week's issue:

"O Lord, Thou fillest all things with light and all the creatures that Thou hast made will rejoice in the noonday of Thy smile. Say to those who are overweighted, overborne with sorrow, trial, difficulty and perplexity, that there is a day coming when there shall be no more sighing or groaning or burden-bearing, neither shall there be any more pain. Whisper to their hearts, 'Sorrow and sighing shall flee away.' Thou dost all things on a grand scale. Thou dost lord the lily and the daisy with dew. Thou dost not spare any of Thy love, the prodigality, the abundance, the overflowing, the overmuchness of Thy love. The sunshine that falls off the little globe we inhabit fills with morning light worlds that lie away. Thou dost give without impoverishment, and if thou didst withhold, it would not enrich thee. The river of God is full of water, and abundance stands at Thy right hand like an angel, representing the fullness and the tenderness of Thy compassion."

On perusing it one feels himself on a higher level than that of an ordinary secular paper and is disposed to say let us see what this devout Clandius Clear has to say on general politics, after having lifted our soul into the realms of evangelical union. I come upon a fierce Radical attack on Lord Salisbury's Guildhall speech, simply because the Unionist Prime Minister, and all sense of fairplay, of courtesy, of impartiality is thrown to the winds. And to the winds go the hypocritical prayer and a feeling of nausea and indignation is generated. And yet this is the stuff the Non-conformist conscience is fed on week by week! From the same paper I gather a Glasgow Professor in the Free Church College is at his favourite work of sneering at old evangelical truth. If there is one verse more than another in the Bible that through the ages

has brought comfort to weary souls, it is that containing the word, "come with me all ye that are weary and heavy laden." The rationalist Professor has discovered by a "scientific" study of the Gospel of Matthew that the ordinary interpretation put upon the words is altogether false and erroneous. It was not meant for a general invitation to all the "weary and heavy laden." It was a soliloquy by Christ to himself, which by arrangement Matthew the Publican overheard, and simply indicated not the "yearning of Jesus to give rest to weary multitudes, but His longing for apt disciples."

And that is the present teaching in the Church of Chalmers, Candlish, Cunningham, Duff and Guthrie! Teaching, no doubt highly appreciated by Marcus Dodo in Edinburgh, and George Adam Smith in Glasgow, to say nothing of William Miller of Madras. I beg his pardon, now that he has returned to Madras, I must give him his full title of which he is so proud, the Hon. and Rev. Dr. Miller. Won't he astonish the Madrasites when he turns up at the Governor's levee in his moderator's dress, shoe buckles and all!

The Indian Famine. All who take an interest in India are watching the development of events. Is it to be a severe famine or only scarcity? The best news in connection with it, is the efforts being made in Russia to raise subscriptions for the famine stricken. What better proof could we have than this, that as between ourselves and Russia "old things have passed away, all things have become new," more than justifying Lord Salisbury's remarkable words in his speech at the Guildhall.

• **France.** Two important events have to be noted. The masterly speech of M. Hanotaux on Armenia, and the death of the ex-President of the Senate, M. Challemeil Lacour. The latter was a very remarkable man to whom Mr. Blowitz in the "Times" has endeavoured to do justice. He was one of the "Immortals," a life Senator and had been Minister of Foreign Affairs, and Ambassador here.

Mr. Hanotaux's speech in the Chamber on the Armenian question was worthy of him, calm, clear and statesmanlike, no attempt to rival Mr. Gladstone's vocabulary of abuse. I have never seen any answer to the question What did Mr. Gladstone do during his last two tenures of the premiership to give effect to his extraordinary views of how to settle the Turkish question. When his zeal carried him away in the Bulgarian agitation, he was in opposition as now in dealing with the question of Armenia. It is like his famous bribe, when he suddenly dissolved Parliament in 1874 to abolish the Income-Tax. When he got back to office, nothing more was heard of the abolition of the Income Tax. M. Hanotaux is a statesman, one of the first in Europe. The Lord of Havarden is merely a domestic politician. The marriage of

The Duke of Orleans must be noted, on account of a foolish incident. A few ultra royalist ladies travelled from Paris to Vienna to present the bride with a crown of diamonds faced with a *fleur de lis*, which she wore at the wedding. A foolish story got abroad that when thanking the ladies for their gift, she made the statement that she prayed Providence that the crown might descend on the head of the Duke, and that in such an event she would be ready to second him with all her strength. The story bore its own contradiction, as the strict etiquette of the Austrian Court would have prevented such a *tracasserie*, unless indeed the speech had been made with the Emperor's sanction. That would have meant a rupture between France and Austria. However, an official denial was at once forthcoming, and so the incident ended.

On the day of the wedding at Vienna, a service was held at the Madeleine in Paris attended by all the Bourbon aristocracy, and an effort was made to rouse public feeling by disseminating Bourbon literature. Remarking on these incidents, the "Times" writes: "Monarchy in France is hopelessly handicapped by the long break in its traditions. The Republic alone has governed France for more than a quarter of a century, a period long enough to eradicate the sentiments and principles to which monarchy makes its appeal...Probably it is not too much to say that the old monarchy is about the last rival that the Republic has to fear...If Republican institutions are ever overturned it will be by a dictator born of the Republic, a man of modern type, wielding modern forces, appealing to modern instincts and possessed in a high degree of the qualities that dazzle the modern democrat. Should society want a saviour it will find him in some demagogue of larger brain and more virile force than his fellows. He will be modern of the moderns, and will employ the men, the materials, and the organisation of the Republic to construct his new system."

Cyprus. On the 6th instant some gobemouches spread a rumour that Lord Salisbury had determined to abandon Cyprus. The following morning an official contradiction appeared. It is a favourite weapon with the fanatics to urge that the convention of 1878 must be abrogated. But as Lord Rosebery pertinently asked in his famous speech, To whom are we to surrender it?

I am not going to discuss the question of the *modus operandi* by which we obtained possession of the island. Mr. Morley promises us some dainty debates on it when Parliament meets. I saw a

singular statement in a paper the other day which I have been unable to verify, that the idea was present to the fertile brain of the young Disraeli, when he wrote Tancred. Be that as it may, I have never been able to follow the line of those who assert that his diplomatic action in 1878 was unworthy of an English statesman. On the contrary, it seems to me to be only another proof of his extraordinary genius. He was combating Russia. The agreement with Turkey, was, Great Britain was to hold Cyprus until such time as Russia restored Batoum, Kars and Erzeroum, to Turkey, England paying to Turkey £92,440, as quit rent. Now who benefits most by the financial arrangement? Why, England pays one half of it to the French bondholders of the 1854 Turkish loan. Obviously then the first to lose by tearing up the convention would be the French bondholders. And then comes the question what has England done for Cyprus? Why, as, wherever she goes, she has been a civilizing Power, and the Cypriotes are thoroughly happy and contented under the benign rule of our gracious and beloved Queen. Before parting for the present with the subject, I may give you a squib written years ago when the late W. H. Smith, as First Lord of the Admiralty, and the present Lord Derby, then Lord Stanley, as Secretary for War, paid the island an official visit in a man-of-war. It will have all the more interest to you that it was written, I believe, by an eminent officer of the Indian Treasury, long since dead. The lines are

The Cypriotes received them with wildest huzzas:
The one they thought Neptune, t'other Mars,
They raised a brass statue to Stanley forthwith
And ran up a bookstall for W. H. Smith.

NEEDLESS ALARM.

Whether the suffering which people undergo from disease is more physical than mental is a point not easy to decide. It depends largely on the nature of the disease, and the make-up of the individual. Experience seems to show, however, that in one prevailing disease—indigestion or dyspepsia, the two kinds of suffering are very evenly divided, and both very great, the mental distress being chiefly due to the illusions and deceptions which attend it. For example, though dyspepsia is solely an affection of the digestive organs, it has power to set up disorders in others which always alarm the sufferer, and often perplex his medical advisers. These symptoms or sequences may relate to the head, the heart, the sight, the hearing, the lungs, or to other organs or functions. Take an illustration or two.

"In the spring of 1891," says Mr. Edward Tatham, "I fell into a low, weak state of health. I had a foul taste in the mouth, and was constantly spitting up a thick phlegm. My appetite was poor and after eating I had fullness and pain at the chest—the latter seemed to be puffed or swollen. What made me most anxious was my *breathing*, which came to be so difficult and short that at times I could only catch my breath by an effort. I was led to fancy that something must ail my lungs, especially as so great a quantity of mucus gathered in my throat and mouth. It was usually worse at night, and I got very little sleep on account of it; sometimes none at all. In a morning I would be quite worn out.

"As time went on I became very weak, and was much put to it to get about. I took all kinds of medicines and got no proper relief from anything. In February, 1893, Mr. William Beardsey, grocer, Cotmanhay, told me how he had been cured of a like trouble by Mother Seigel's Curative Syrup. Acting on his advice I got a bottle of this medicine from Mr. Platt's Drug Stores, Awsworth Road, and after taking it felt quite another man. My *breathing* was easier, and my food agreed with me. I continued using the Syrup, and got stronger and better every day. When I had taken four bottles I was as well as ever, being free from all pain or discomfort. My wife, who has suffered for years from *liver complaint*, has taken the Syrup with the same good results as in my own case. You are at liberty to make any use you like of this statement. (Signed) Edward Tatham, Tatham's Lane, Cotmanhay Road, Ilkerton, Derbyshire, March 21st, 1895."

"In October, 1888," writes another, "I began to feel weak, heavy, and tired. My appetite was poor, and after eating I had distress at the stomach, together with *shortness of breath*, and a good deal of pain across the chest. Sometimes I would be taken with sudden dizziness, as though I must fall to the ground. Cold, clammy sweats used to break out all over me and I trembled from head to foot. Finally, I got so weak I could scarcely walk to my work. Indeed, I had occasionally to leave my work; I have been away as long as a month at a time. In this way I suffered for about two years.

"In August, 1890, Mr. Thompson, the grocer in Church Street, urged me to try Mother Seigel's Syrup. After taking only one bottle I felt better. My food agreed with me and I was stronger. Continuing with this medicine, gradually all pain left me, and I completely recovered my health. Since then I have kept the Syrup in the house for use in time of need. You are free to publish this statement. (Signed) William M. Blenner, 71, Robinson's Buildings, Newhall, Walth, near Snefield, October 11th, 1895."

Cases of supposed disease of the heart, of the nervous system, of the kidneys, &c., constantly prove to be, not organic affections of those parts at all, but merely local or functional disturbances caused by the toxic or poisonous principles thrown into the blood by the decomposition or fermentation of food in the stomach; otherwise, by dyspepsia or indigestion. But until they are discovered to be so they are mistakenly treated; and serious, often fatal, results, follow. Until pronounced and undeniable symptoms of organic mischief show themselves (which is not the case once in a hundred times) you may take it for granted that your ailment is some form of dyspepsia, easily curable by Mother Seigel's Syrup, as demonstrated by the two instances cited above.

MILITARY SECRETARY'S OFFICE.

NOTIFICATION.

Simla, the 22nd September, 1896.

No. 9510-M.—His Excellency the Viceroy and Governor General will hold a Levée at Government House, Calcutta, on Thursday, the 17th December 1896, at 9-30 P.M.

All Civil, Naval, and Military Officers, Members of the Consular body, gentlemen whose names are borne on the Government House List, or who have already been presented at the Court of St. James, and Native Officers of the Native Regiments of the Garrison are invited to attend.

Gentlemen who propose to attend the Levée are requested to send their cards to the Aide-de-Camp in Waiting not later than Saturday, the 5th December 1896, after which date no cards will be received, and to bring with them to the Levée two cards with their names clearly written on them—one to be given on entering Government House, and the other to the Aide-de-Camp in Waiting at the time of presentation.

Gentlemen who propose to present others must send in *in writing* for approval the names of such gentlemen to the Aide-de-Camp in Waiting, not later than Saturday, the 5th December, when, if they are approved, presentation cards will be forwarded.

Gentlemen who present others must themselves attend the Levée.

Gentlemen wearing uniform will appear in full dress.

Gentlemen not entitled to wear uniform will appear in evening dress.

Clergymen being University Graduates and other gentlemen entitled to wear robes or gowns on account of judicial or academical office or status should appear in such robes or gowns.

The carriages of Gentlemen (except such as have the Private Entrée) attending the Levée will enter by the North-East Gate, set down under the Grand Staircase, and pass out by the North-West Gate.

By Command,

A. DURAND, Colonel,

Military Secretary to the Viceroy.

MILITARY SECRETARY'S OFFICE.

NOTIFICATION.

Simla, the 23rd September, 1896.

No. 9532-M.—Their Excellencies the Viceroy and the Countess of Elgin will hold a Drawing Room at Government House, Calcutta, on Saturday, the 19th December 1896, at 9-30 P.M.

Ladies whose names are borne on the Government House List, or who have already been presented at the Court of St. James proposing to attend the Drawing Room are requested to send their cards to the Aide-de-Camp in Waiting not later than Wednesday, the 9th December 1896, after which date no cards will be received, and to bring with them to the Drawing Room two cards with their names clearly written on them—one to be given on entering Government House, and the other to the Aide-de-Camp in Waiting at the time of presentation.

Ladies who propose to present others must send in *in writing* for approval the names of such ladies to the Aide-de-Camp in Waiting, not later than Wednesday, the 9th December, when, if they are approved, presentation cards will be forwarded.

Ladies who present others must themselves attend the Drawing Room.

Ladies attending the Drawing Room will appear in full dress, but need not wear trains or feathers.

Only Gentlemen having the Private Entrée themselves, and accompanying Ladies to the Private Entrée will be admitted to the Throne Room.

Gentlemen accompanying Ladies by the Public Entrée will leave them at the Entrance to the Eastern Gallery and rejoin them in the Ball Room.

The carriages of those who have the Private Entrée will enter by the South-West Gate, and set down at the South Entrance of Government House.

All other carriages will enter by the North-East Gate, set down under the Grand Stairs, and pass out by the North-West Gate.

By Command,

A. DURAND, Colonel,

Military Secretary to the Viceroy.

THE AUTHENTIC WEBSTER.

Revised, Enlarged, and Reset in New Type—

WEBSTER'S INTERNATIONAL DICTIONARY.

2,118 pages, 3,5000 Illustrations, cloth, £1-11s-6d.; half-calf, £2-2s.; half-Russia, £2-5s.; In Two Vols. cloth, £1 14s.

GEORGE BELL & SONS,

LONDON AND BOMBAY,

And all Booksellers.

"THE NEW WEBSTER.

In these days of hurried and superficial work it is pleasant to hear of a book on which one hundred workers have been steadily and quietly at work for a period of ten years, and which they have been able to bring to so satisfactory a conclusion as *Webster's International Dictionary*. In naming the new edition thus, the publishers say, 'we recognise that the language of the mother-country now encircles the globe; that the literature of each of its branches is the common possession of all; that not only through the literary, but also through the popular, speech of all these peoples there runs a unity of structure, a common vocabulary, and a substantial identity of the entire language, compared with which local variations are but trifling. Any complete dictionary of this language must be so comprehensive in its scope, and at the same time so true to those canons of the best-usage which are everywhere acknowledged, that it shall be serviceable to the inhabitants of Great Britain, of the United States, of Canada, of Australia, and to the English-speaking population of India and of Africa. The Londoner, reading a story of Bret Harte, will turn to such a dictionary for the slang of a Californian mining-camp, and the Melbourne merchant will consult it for the usage of the New York Stock Exchange. Beyond any other modern or ancient tongue, the English is coming to be a world-speech. The extension over the earth of the race-elements that use it as their mother-tongue, and the strengthening bond of unity among all English-speaking peoples, are among the most significant and beneficent facts of the age. It is in recognition of this, and of the wide use of *Webster's Dictionary* as an authority in Great Britain and its dependencies, as well as in the United States, that the present edition is distinctively called 'The International.' The change of title thus explained and justified, it remains to ascertain what changes and improvements have been made in the dictionary. It is evident at a first glance that the book has been materially increased. The pages are longer, and there are many more of them than in the earlier editions. Further inspection shows that the definitions have been made much fuller wherever the importance or many-sidedness of a word demands such expansion. The old principle of compactness has not been abandoned. The dictionary is not an encyclopædia. It is still what it always was specially adapted to the use of busy people, and people whose time is valuable."

A NEW HOME TREATMENT.

Sufferers are not generally aware that these
diseases are contagious, or that they are
due to the presence of living parasites in the
lining membrane of the nose and eustachian
tubes. Microscopic research, however, has
proved this to be a fact, and the result is that
a simple remedy has been formulated whereby
these distressing diseases are rapidly and per-
manently cured by a few simple applications
made at home by the patient once in two
weeks. A pamphlet explaining this new treat-
ment is sent on receipt of 2½d stamp by A
HUTTON DIXON, 43 & 45 East Bloor St.
TORONTO, Canada.

REVIEW OF POLITICS LITERATURE AND SOCIETY

VOL. XV.

CALCUTTA, SATURDAY, DECEMBER 12, 1896.

WHOLE NO. 753.

THE DUKKERIPEN OF THE STARS.

[The Tarno Rye, on the night of his return to the encampment of Boswells in Gypsy Dell, lingers before calling for the ferry-boat upon the tongue of land called Porto Bello, and looks down the river, where the stars are brilliantly reflected. Rhona, who has secretly come to meet him, appears on the opposite bank, but does not perceive him owing to the shadowing trees under which he stands.]

THE TARNO RYE.

I.

What sees she in the river as it flows?
Does she recall that summer night when we
Rowed here beneath the stars—the night when she,
Unconscious, then, of that within my breast
Which held me mute, murmured in loving jest,
“Our Tarno Rye, he’s dreamin’ while he rows”?
Or is she gazing at the stars that shine
Mirror’d within the stream to read their sign—
The dukkeripen* of good or evil made
By their reflections mingled with the shade
Yon pollard willow throws?

II.

That night I murmur’d, “Life’s one joy is this,
To love, to taste the soul’s divine delight
Of loving some most lovely soul or sight—
To worship still, though never an answering sign
Should come from Love asleep within the shrine.”
That night I said, “I ask no more of bliss
Than—while beneath the boat the wavelets heave—
To touch the gauds upon a Gypsy’s sleeve,
To see her bright nails glisten on her fingers,
To see her throat on which the starlight lingers,
Her mouth I dare not kiss.”

III.

But that same night Love wrote around the prow
In stars! Her trembling body turned to me
In joyful fear of joy, and I could see,
Pictured in frightened eyes, the blissful things
A girl’s pure soul can see when Love’s young wings,
Fragrant of heaven and earth, fan first the brow.

*
[Rhona gives a sudden start and looks round.]
What means that start? Why stands she there to listen?
I see her eyes that in the starlight glisten—
Her eyes—but not the thing of dread they see:
She’s feeling where her knife was wont to be—
Ah, would she wave it now!

[“The Scollard’s” figure appears from behind the pollard willow.]

IV.

‘Tis he, my Gipsy rival, by her side!
He lifts a knife. She springs the dauntless girl,

* Nature’s prophetic symbol. The dukkeripen of the stars reflected on a river is believed to be very powerful.

Lithe as a leopardess! But can she hurl
The giant down the bank? He falls below—
Falls where the river’s darkest waters flow!
Twice, thrice he rises—sinks beneath the tide!
Only the stars and I have seen him fall.
Death is her doom who slays a Romany *chal*
And weds a Gorgio: death! But only we,
The stars and one who loves the slayer, could see
How he the murderer, died.

[He looks in the river, where the reflected stars make mysterious figures as the ripples twist round the bulrushes.]

V.

‘T was only we who saw, ye starry throng!
And one white lie of mine will hide the deed
Of her who gave me love against her creed—
The Romany woman’s creed of tribal duty—
Gave Rhona’s wealth of love and faith and beauty.

THE DUKKERIPEN OF STARS IN THE RIVER.

Falsehood can never shield her: Truth is strong.

THE TARNO RYE.

I read your rune: is there no pity, then,
In Heaven that wove this net of life for men?
Have only Hell and Falsehood heart for ruth?
Show me, ye mirror’d stars, this tyrant Truth—
King can do no wrong!

VI.

Ah! Night seems opening! There, above the skies,
Who sits upon that central sun for throne
Round which a golden sand of worlds is strown,
Stretching right onward to an endless ocean,
Far, far away, of living, dazzling motion?
Hearken, King Truth, with pictures in thine eyes
Mirror’d from gates beyond the furthest portal
Of infinite light, ‘tis Love that stands immortal,
The king of kings. And there on yonder bank
Stands she, and, where the accursed carrion sank,
The merry bubbles rise!

VII.

At last she sees me on this tongue of land,
She plunges through the fringe of reed and moss,
She takes the boat; she’s pulling straight across,
Startling the moorhens as the dark prow brushes
Through reeds and weeds and water-flags and rushes.

* * *
Yes, yes, I saw! Is the little hand
That slew him? How the slender fingers quiver
Against my lips! Those stars within the river
May write of how he died, but Love, my darling,
Looks straight at Doom, though wolves of Death are snarling,
And smiles: “Behold, I stand!”

THEODORE WATTS-DUNTON.

—The Athenaeum.

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

WEEKLYANA.

FOR the first time, Madras has been given a Mahomedan sheriff and Calcutta a Marwari. The dignity is now more honorary than remunerative, yet it is an honour coveted by many commercial men.

WE see a company in the land of the Five Rivers offering to make the poor rich, the unlucky fortunate, and the rich more prosperous, and all to roll in wealth—for only one rupee. As the question involved in the offer interests states as well as individuals, the Government of this country will do well to pay particular attention to the advertisers.

GOVERNMENT officers lent to Municipalities, Port Trusts, and Local Boards, unlike those lent to Native States and Railway Companies, are not allowed promotion on the Government list until they return to Government service. They will, however, henceforth be placed in the same position as other Government servants in foreign employ, in respect of *pari passu* promotion through the grades of the Department, including eligibility for the special pension of Rs. 1,000 and Rs. 2,000 after promotion to the Superintending Engineer and Chief Engineer classes, provided that the appointments they hold are of equal rank and responsibility with those of a Superintending or Chief Engineer in Government service, and that their qualifications are such as would have entitled them to promotion under the Government rules.

Nature says of Babu Rambramho Sanyal's book "Hours with Nature:" "As the book is essentially a medley, to give an account of its contents is difficult." * * * If the book reaches a second edition, we would, however, advise him to study Mr. Boulanger's works, when he would probably amend his classification of reptiles, and point out some means of distinguishing between snakes and limbless lizards."

WE have received letters from respectable Mahomedan gentlemen taking exception to Khan Bahadar D. H. Ahmed's letter, the concluding portion of which was published in our number of the 21st November last. One of them says:

"I see Mr. D. H. Ahmed has an itching for writing. Write he must, whether sense or nonsense. None of his coreligionists cares to read his opinion on Mahomedan religion and law which he ought to know are not susceptible of change. It is a pity that he does not study the fundamental principles of Islam. One who attempts to introduce a change in the religion or law of the Arabian Prophet is regarded as a renegade by the Faithful. I do not know what his object is in discussing a subject with which he is not quite conversant. If it be to attain the position of a leader of Mahomedans in Calcutta, the less he talks about religious subjects the better. If the old Syed of Aligarh had refrained from making adverse comments upon the Koran, he would have to-day enjoyed the friendship of his coreligionists without exception."

Another writes:—

"Mr. D. H. Ahmed has recently been studiously keeping himself before the public in print and discussing with much authority such questions as the downfall of Mussalmans in Bengal and the reformation of their law of inheritance. He seems to be more philosophical than practical. It is not astonishing that these revolutionary reformers cannot discern the causes of the ruin of the old and opulent families and the general backwardness of the Mahomedans of the day in these provinces. They lack the power of observation.

Mr. D. H. Ahmed has lately been converted to Shialism. I believe this is his fourth change of faith and belief since he left school. He has written an Urdu pamphlet on some points of difference between the Shias and Sunnis. Not to say anything of the arguments, its Urdu is not even correct, but our friend cannot suppress his desire of appearing in print in some form or other."

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

THE *Englishman* is "assured on excellent authority that the Government of India has definitely decided to stand aloof from any scheme for importing grain into this country, and merchants may rest assured that whatever steps they may take in this direction, no competition will be experienced so far as Government is concerned."

Our information is that, on enquiry, Government was informed by European merchants that they could not import grain unless Government were prepared to take it up.

THE Morning Dress Darbar as announced last week was held at Belvedere on Tuesday. Sir Alexander Mackenzie first invested Maharaja Govindlal Roy and then addressed him in these words:

"Maharaja,—For the past ten years you have been distinguishing yourself and earning the approval of Government by acts of munificence designed to benefit your poorer fellow-countrymen. To you the Native Sanitarium in Darjiling mainly owes its existence, and the town of Rungpur its drainage. It would be tedious to detail the list of your minor benefactions. Suffice it to say that Sir Charles Elliott, in recognition of the fact that he had always found you foremost in good works, recommended you for the title which I have to-day had much pleasure in conveying to you."

It would be tedious indeed to enumerate the acts of the Maharaja.

Raja Sashishekharwar Roy was the next in the list. To him, the Governor's words were:

"Raja—You are an ex-ward of Government, and the Court of Wards has reason to be proud of its pupil. On taking personal charge of your estates, you devoted yourself to the enlightened promotion of agriculture, and especially to the revival of the silk industry. If all landed proprietors followed your example, Bengal would as a province be greatly benefited. In recognition of your services to the country at large, and of your intelligent discharge of your duties as a landlord, you were in 1889 created Raja. To-day's advancement in dignity recognizes your continued good work, and especially the services rendered by you to Government as a member of the Hemp Drugs Commission."

Then were brought up Shams-ul-Ulama Maulvi Zulfiqar Ali, Khandkhar Fuzli-Rabbi, Khan Bahadur, Rai Ram Okhey Chatterjee Bahadur, Rai Sarat Chandra Das, Bahadur, C.I.E., Maulavi Badruddin Haidar, Khan Bahadur, Rai Hari Ballabh Bose, Bahadur, and Rai Anand Chunder Sen, Bahadur, of Dacca. Then he addressed collectively:

"Of the seven gentlemen to whom I have just handed sanads of their titles, three are, I am happy to say, Mahomedans. The first, Shams-ul-Ulama Maulvi Zulfiqar Ali, is noted for his Arabic scholarship and efforts in the cause of Mahomedan education, the second Khandkhar Fuzli-Rabbi, Dewan of my old friend the Nawab Bahadur of Murshidabad, is distinguished not only by his social position, but also by his historical work 'On the Origin of the Mussalmans in Bengal.' The third, Maulvi Badruddin Haidar, has earned the good word of all the Presidency Magistrates with whom he has served and also of the High Court Judges, for his zeal, ability and integrity, and has also done good service as a Municipal Commissioner. Of the remaining four, two—Ram Okhey Chatterjee and Ananda Chunder Sen, rendered long and faithful service to Government as Deputy Magistrates, and are now enjoying their well-earned pensions. Hari Ballabh Bose is a member of the Orissa Bar, who has been for many years the Government Pleader at Cuttack, and is universally respected there for his high character and abilities. Last, but by no means least, we have that distinguished explorer, Sarat Chunder Das, C.I.E., who is officially Tibetan Translator to Government, but is better known to the learned world as the enterprising traveller who opened up once more the mysterious land of the Lamas, who lived in their monasteries, acquiring their language and their confidence, secured from their libraries many of their most important manuscripts, and is now engaged in compiling a dictionary of their speech which will give to European scholars a much-wished for key to the hitherto occult wisdom of High Asia. To one and all of these gentlemen, I have had pleasure in conveying these marks of the approval of the Government."

Then Sir Alexander remembered the would-be recipients of honour.

"I see among this audience many who have achieved similar distinctions. There are many more to whom the ceremonies of to-day may well serve as an incentive. The Government is never better pleased than when it sees the wealthier members of the community employing the superfluity with which Providence has blessed them in relieving the miseries or improving the lot of their poorer fellow-subjects. It takes note, as far as it can, of every landlord who is considerate to his rayyets. It delights to reward long and faithful service to the State, and to crown literary and artistic merit. It endeavours indeed to find out and recognize merit of every type and in every class of the community."

And concluded with an appeal to all the rich and the charitable in his dominions in view of the threatened famine:

"And now I would only say to you, and through you to the whole aristocracy and plutocracy of Bengal, that if you only have the will to do good none of you need at the present moment lack the opportunity. We are face to face in some districts with very real famine. In some there is actual dearth of food now, and in many there is not only the possibility of similar death hereafter, but also the risk of an even more terrible water famine. Government will, I need hardly say, do

to the best of its ability, and measures are already far advanced for meeting distress in those districts where the need is most pressing. But this is a year when every zemindar and owner of land ought to bestir himself for his own sake to keep his rayyets on their fields. Every means of increasing and improving the water-supply ought also to be sedulously set in motion. If there is any doubt about the sufficiency of local stocks, supplies of grain ought to be brought in from outside. For works of agricultural improvement the Government is ready to give advances, but there are hundreds of proprietors who need no advances, but are fully able to do all that their tenants need in the way of tank-digging, well-sinking, and other local works. I hope shortly to hear from all sides that work of this kind is being started. But I specially commend to your attention the small people of respectable standing who cannot dig and are ashamed to beg—he poorer *bhadra-log*. For them let the tact and good-will of their wealthier fellow-countrymen find suitable means of succour. The Government does not repudiate its own obligation to keep all classes of its subjects alive, but its methods are necessarily rough and indiscriminating, and into some classes of cases it is hardly seemly for it to pry. The price-lists even in Eastern Beagal are weighing on me like a nightmare just now. The whole staff of the Province is, I believe, on the alert, but unless we have the support and active help of the leading men in each locality, we shall fail to grapple adequately with the situation.

I shall keep myself informed as far as possible of all those who come forward at this crisis to do what is after all only their duty, and I have every confidence that Bengal will turn out to be inferior to no Province in the liberality of its rich men and the providence of its landholders."

NOTES & LEADERETTES, OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS

LORD George Hamilton, replying to a letter, stated that it was not at present the intention of the Government to undertake the supply and sale of grain, they believing that private enterprise was adequate. The possible formation of local corn rings would not be overlooked. Government was well able to deal with such illegal combinations.

The Russian newspapers have collected over one thousand pounds for the Indian famine relief fund, and they complain of Great Britain's failure to appreciate Russian sympathy.

THE St. Petersburg *Bourse Gazette* says that as the international situation is not favourable to Russia and France in demanding the evacuation of Egypt, it is best to postpone the Egyptian settlement, and concentrate their activity in Europe on the more urgent question of the settlement of Turkish affairs.

ALL the dock labourers in Hamburg have now struck, owing to the refusal of the employers to accept the offer of the authorities to arbitrate, though the men have accepted arbitration. A great Railway strike is threatened in England, owing, it is stated, to the London and North Western Railway Company dismissing some brakesmen.

IT was reported on the 5th December that the Egyptian Government had accepted the British offer of pecuniary aid, and conveyed its grateful thanks to Lord Salisbury. Next day, we were told that Egypt had expressed her warm gratitude to Great Britain for her offer of pecuniary aid towards the cost of the Dongola expedition, but had not accepted it, and that the Khedive's Government the same day refunded half a million to the Caisse Dette. The next day's telegram was that the payment was effected from the cash balance in the Egyptian treasury and that England would advance two hundred thousand pounds this month, and further amounts as required. The *Times* believes the loan will be chargeable to surplus revenues which will not be affected by the demands of the Caisse Dette.

The report that a French Syndicate has offered to advance the Egyptian Government half a million sterling, but the British have made a prior offer which renders the acceptance of the French offer unnecessary, is officially denied at Cairo.

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 29, SOUTHAMPTON BUILDINGS, HOLBORN, LONDON.

TURKS are being arrested nightly at Constantinople. The prisoners are conveyed to the Palace, where the Minister of Police and the Prefect have a permanent residence. Those lately arrested have been exiled without trial to Anatolia. It is believed that they are connected with the liberal party, which is growing in strength, and has sent a manifesto to the Embassies demanding political liberties, and concluding "Down with the Tyrant!"

PRESIDENT Cleveland in a message to Congress strongly urges the granting of genuine autonomy to Cuba which would end the ruinous war now going on there. America, he adds, is always ready to act as mediator, and he hints that she might eventually intervene in Cuba if Spain proved powerless to restore order. Mr. Cleveland says he can not believe that the present sombre prospect of affairs in Turkey will be long permitted to offend the sight of Christendom. With regard to tariffs he merely defends the existing ones. The Republicans are about to frame a tariff bill to submit to a special session of Congress after March 4. Reciprocity will be its chief feature, and it is understood that average rates will be lower than the Mackinley tariff, but will be considerably above the present rates.

THE Porte has received a despatch from the Ottoman Ambassador at St. Petersburg stating that complete accord exists between Russia and Great Britain regarding Turkish reforms.

VENEZUELA has accepted the agreement arrived at by the United States and Great Britain to settle the frontier question in dispute by arbitration.

THE French Ministry intend proposing an immediate reform in and increase of the Navy involving expenses of two hundred million francs. The German Government has proposed to increase the subsidies paid to steamship lines running to the Far East to one million and a half marks in order to meet foreign competition.

THE *Cologne Gazette* states that King Menelik has ceded to Russia a coast strip for a coaling station near Obok.

ADVICES received at Berlin state that the Dutch Consul at Lorenzo Marquez has been assaulted and wounded, that the German consulate has been attacked, and also that the British flag has been torn to pieces. No details of these outrages are yet to hand, Germany has demanded reparation of the Portuguese Government.

ADVICES from Madagascar state that the rebels in the middle of November looted a town ten miles from Antananarivo, and took some cattle and forty prisoners. The English residents had a narrow escape from being massacred.

THE *Times*, in discussing the Russo-Chinese treaty published by the *North-China Daily News*, says that there is room in the Far East for both Russia and Great Britain, and that the latter must simply strengthen her own positions and extend her markets, and if ever her interests are directly assailed, she must resist, if necessary, by arms.

THE North German Liner *Salier*, bound from Bremen to Buenos Ayres, was totally wrecked near Corunna, and all on board, numbering 275, were drowned. There were no Englishmen among them.

IT has transpired that two cases of plague were landed in London from Bombay in October, and treated in the Seaman's Hospital, without spreading elsewhere.

REUTER'S correspondent at Blantyre sends news, dated 25th October, stating that, owing to the Matabele rising, the Angoni Zulus under Chikusi attacked the south-west portion of Nyassa, burned the British Mission and many native villages, and killed many natives. Five hundred troops, including Sikhs, have been despatched against the invaders.

THE Viceroy returned to Calcutta on Thursday. There was a large gathering headed by the Lieutenant-Governor on the grand staircase of Government House to welcome him. Next Thursday, Lord Elgin holds his Levée. The Drawing Room follows on Saturday, the 19th December.

THE Municipal Commissioners in meeting have accepted without a dissentient vote the sanction of the General Committee for spoliation of Bendon Square by the Congress *Pandit*. Not that there was no verbal opposition. Only one Commissioner, Native, had the courage to oppose the desecration. And a European Commissioner raised his voice against the inroad into Calcutta on the occasion of people from Bombay where plague is raging. We doubt not the Medical Board will take up the subject. By the bye, can the Commissioners close the Square or any portion of it to the public? The Congress is supposed to represent the people and to press their rights on Government. How do the Calcutta managers of this year's Assembly encroach upon a valuable privilege of the residents of Native Calcutta?

THE office of Superintendent of Stamps and Stationery has always been considered a sinecure and been the resort of special favourites or the burial ground of independence. Mr. Roberts, the Police Magistrate, for quarreling with Sir Stewart Hogg, the Police Commissioner, over the murdered body of Mr. Justice Norman and for other impertinence, was sent there as to Coventry. In later years, Mr. Ryland had to make room for Mr. Barnes, the relative and Private Secretary of Sir Rivers Thompson. The present incumbent, who was out-beaming Beames in the Registration Department, was selected by Sir Charles Elliott, let us hope, for curbing his mischievous activity. He, it seems, is not for mending his ways, and the office having run into chaos, has to be set right again. It is said the incoming man is the Burma importation of Sir Alexander Mackenzie for his Private Secretariat.

The post of Assistant Superintendent has just been given to a European who has seen service for only a year. Another ugly rumour is that the office of Income Tax Collector is to be filled by another European ministerial officer on a pay of Rs. 1,000, who is only of the grade of Rs. 250. The question arises, Has it not been ruled that natives of India as defined in the statute are eligible for these appointments and why should there be such a big jump in favour of Europeans to the exclusion of deserving "Natives of India?" There is, besides, the order of the Secretary of State that no European is to be appointed to posts of Rs. 250 and upwards without special sanction.

KHAN BAHADUR Abdul Jubbar Saheb who would not be allowed to retire as Inspector-General of Registration, Bengal, and who left the service in dissatisfaction, has been partially compensated by the Secretary of State with a special pension of Rs. 5,400 a year. The Khan Bahadur would have been allowed, we are sure, the full Rs. 6,000, if he could act, while in service, independent of his conscience. His retirement, while still capable of hard work, has been a distinct loss to the public service. He comes from a district which supplied most of the Principal Sirdar Aneens, his father Moulvi Gham Ashgar Khan being one. Then was the period when only the respectable and the respectably behaved were taken into the public service, and the low and the ill-bred had to find their sphere of activity in other directions. As the first Mahomedan who had attained the first place in the Matriculation examination of the Calcutta University, and as the son of his father, Sir Frederick J. Halliday, the first Lieutenant-Governor of Bengal, had appointed, in 1859, Moulvi Abdul Jubbar to the Subordinate Executive Service as a Deputy Magistrate and Deputy Collector. After 36 years and 3 months, on the attainment of the age of 57, during which period he not only served Government with zeal and loyalty but also did credit to himself, always doing his duty uninfluenced by threats and frowns or only with an eye to promotion and favour, he retired. But for that strict adherence to his sovereign and his conscience, he would have been a much greater man than only a good neighbour and a faithful friend. Like most Natives in the public service, he did not cling to it till death or till he was forced out of it on account of infirmity, and would not take any private service though offered from high quarters. As a good Musulman that he is, he has made his pilgrimage to Mecca and passes his days chiefly as a retired country gentleman and in the service of his God.

DR. JELOVITZ has followed up his letter of the 5th instant (published in R. & R. of the 5th December) on the Bombay plague by another dated the 7th December which we publish below:

SIR,—Soon after sending in my letter, dated the 5th instant, for publication in your journal, I picked up another journal to look over the telegrams from Bombay, and lo! there I read in large letters the number of patients attacked by the bubonic plague, verifying my remark about the influence of the temperature of the atmosphere on the disease. Lower down, in a paragraph in the same issue, I read: "As it is, the plague is considered irremediable, and must be allowed to run its course." Further up: "The Health Department want to try the experiment of removing a portion of the tiles from the roofs of houses in which plague cases have taken place, and see what health-giving effects can be had by letting in the sun from the house-tops."

I shall not dispute the rationale of that theory—the benefit that may be derived from the rays of the sun; but what does the Health Department intend to do with the rooms on the ground-floor and the other floors immediately below the rooms where part of the tiles from the roof are to be removed? Are they going to remove parts of the ceiling from the lower rooms? How about the portions where the tiles are not to be removed? Is it possible that only a few hours' sun (eight to nine hours at the most) out of the twenty-four hours will have the desired effect? Are not the streets and lanes in the infected quarters equally responsible for the spread of the disease? These are open to the sky and have the benefit of the sun; and though its rays are beneficial to patients, it is doubtful whether their heating power is sufficient to counteract the increasing course of the disease. If we could utilise the sun to such an extent as to increase the temperature of the affected houses, streets, lanes, etc., continually, for about one month or more, it would, as I said in my previous letter, successfully combat the epidemic. Partial or even entire uncovering of roofs, while making the rooms of the uppermost flats uninhabitable, will be useless in raising the temperature of the entire building, as I presume must be the object of the Health Department.

It is now admitted that the vitality of all microbes (pathogenic) whether bacilli or cocci, is destroyed by heat; but different degrees of heat are necessary for different species; whilst some succumb to a temperature of 45 to 50°C., others require much greater heat for their destruction. As the bacillus theory has been so plausibly established in connection with bubonic plague, why not take to artificial heat to destroy the germ? I do not know of any other means than the one suggested in my letter of the 5th instant for this purpose. If no effective measures are taken and the malady be allowed to run its course, I fear it will make its permanent home in Bombay. In certain districts of China, Russia, and Turkish Arabia, plague has made its home. Though not always detectable, it is always present, sometimes showing itself in sporadic cases even as to escape the observation of medical men; and after a certain time, say, three, five, ten, or even thirty years, breaking out in an epidemic form, when it is—erroneously, I should think—believed to be of foreign importation. It cannot be expected to spare Bombay. The Continent of Europe has been free from this scourge for nearly two centuries, and the city of London for over two hundred and thirty years, and why? Because sanitary laws are strictly attended to and enforced.

This brings me to the measures to be adopted in Bombay for radical removal of bubonic plague, and, I may say, of other kindred fevers. The immediate measures at present to be resorted to, have already been suggested in my letter of the 5th instant, and I need not repeat them here. The permanent measures are much more costly and laborious. The cost, whatever it be, need not stand in the way, considering the human lives to be saved and the permanent benefit to be derived. I am not an alarmist, and do not pretend to know all about plague and its ultimate consequences when allowed to die a natural death. I only give my humble opinion from what I know by long experience. The measures to be resorted to, then, to permanently remove this dire disease from the midst of a populous city like Bombay are, to my thinking, first, free public baths in different localities of the city in the native quarters, where the poor can have the benefit of a daily wash of the whole body; these establishments to be provided with hot and cold water, to be supervised by a staff of competent men acting as health inspectors, in order to keep them clean and in a sanitary condition; secondly, removal of all garbage twice a day from every house, lane, and bye-lane; no sweepings and sillage allowed to be thrown into the streets from windows or doors (this prohibition is enforced in the majority of cities in the Continent of Europe); thirdly, the erection of dwelling-houses for the poorer classes, charging them a moderate rent; these buildings to be according to approved sanitary principles, with sufficient space for ventilation. They must not be higher than two storeys, exclusive of the ground-floor, four feet above the level of the ground, and not less than twelve feet high from floor to ceiling. These quarters to be periodically inspected, and the bathing-sinks never allowed to be polluted. Fourthly, revision of the Building Act, with an eye to sufficient light and ventilation of houses.

THE Health Department of the Bombay Municipality seems prepared to adopt the policy of the Russian Government in 1812 to keep out the French Army from taking their winter quarters at Moscow, for driving away Bombay's most unwelcome visitor. Dr. Jelovitz's method is certainly much less costly than partial or wholesale demolition or burning of infected houses and quarters.

The doctor has also some words for a correspondent of the *Statesman*, who, hiding himself under "Light," doubts his method as not supported by known specialists. Dr. Jelovitz replies:—

SIR,—"Light" remarks as a matter of fact that heat for the purpose of extinguishing epidemics has never been proposed by specialists in Europe or America, but does not say whether his specialists knew anything about bubonic plague and how it disap-

parts. In my first letter (5th December) I said that the malady has been known to abate and ultimately to disappear from a place when the temperature rises. Indeed, I know of no other disease in an epidemic form, to yield to heat as bubonic plague. "Light," I fear, either misinterprets or does not understand me. He says that "man is the foremost agent and recipient of infection." Exactly so, and it is that infectious atmosphere that must be cleared, and, from experience, I do not know of any other agent but heat (I here speak of infected atmosphere in connection with bubonic plague.) Heating the atmosphere does not increase the temperature in man, as it is well known that the perspiratory glands, besides doing other duties, perform the function of keeping down the temperature of the body during exposure to heat. He also tells us that "drinking water is another well known agency for conveying infection." This I admit, but he forgets that in bubonic plague the digestive and assimilative tracts are rarely affected and when they are, that is only a complication. In cholera and typhoid the gastro-intestinal disorders are the prominent symptoms. He remarks that "men could not easily quench their thirst in an atmosphere of 120°F (?) by drinking water of the same degree of heat." The heating of the atmosphere in a room, say 120°F., is surely not capable of raising to the same degree the temperature of the water, still less that in underground pipes. In a Turkish or Russian bath, both cold and hot water are found. In Russian baths, you always see the barrels of cold water in a room heated from 70 to 75°C.

THE Maharaja of Tippera, Bisam Samarvijay Mahamahodayi Pancha Sri Sriji Maharaja Bir Chandra Deb Barman Manikya Bahadoor, has not survived his banishment long. Yesterday, at his Calcutta residence in Little Russell Street, he drew his last breath. When on the 1st of August last we wrote of Tippera and him, there was no public intimation that he was ailing, away from home and his kingdom. Yet he was dying a slow death and it was the interest of no party to let him know that his days were numbered. He had once shaken off a gradual decay. From Calcutta, he went to Kurseong and came back to Calcutta to die. His has emphatically been the crowned head that lay uneasy from start to finish. And who could have thought that the home-loving Bir Chandra who got the kingdom because he was not permitted to leave home, would, towards the close of his career grow so fond of Calcutta and die there? He began in troubles, lived in troubles and dies in no peace of mind. For all that, he was an accomplished prince, had a kind heart and a loving soul and patronized the arts. Unless there is any ambitious design in any quarter to divert the usual course of succession, the heir-elect Sula Sriji Jubaraj Goswami Radha Kisor Deb Barman Bahadur assumes full authority in the State of Tippera. The selection of the next Burra Thakur will, we hope, introduce no fresh trouble into the principality, and that the new Maharaja will reign in peace.

THE Secretary, Medical Board has, under date Calcutta, the 9th December, 1896, addressed the following letter to the Chairman of the Calcutta Corporation:—

"Sir,—In continuation of my letter No. 43, dated 30th November, 1896, suggesting the early adoption of certain measures of conservancy, I am directed to address you further on the subject of the inquiry which the Board are now conducting into the sanitary condition of the town of Calcutta. The Board commenced that inquiry under the authority conferred upon them by the Government Resolution No. 937T.—M., dated Dujiling the 10th October, 1896, when it was believed that an outbreak of bubonic plague was imminent. In order to determine what steps should be taken to guard against such a disaster, the Board deputed a number of medical officers to examine the actual condition of the town and report on its sanitary requirements. The report of these officers has disclosed the existence of very serious evils, into the causes of which the Board have been directed by Government to make a full and searching inquiry, the results of which will complete their general inquiry into the liability of Calcutta to an invasion of the plague which is now rapidly gaining strength in Bombay.

The facts may be summarised as follows:—

I.—Overcrowded and badly built houses.—In many parts of the town both pukka houses and busti huts are dangerously overcrowded, and are built in a manner which renders proper ventilation and efficient conservancy almost impossible.

II.—Defects of public latrines.—The public latrines are deficient in number, faulty in construction and imperfectly cleaned.

III.—Defects of private latrines.—The private latrines are in many cases so constructed that they cannot be properly cleaned, nor can the Conservancy officers get access to them; and consequently many of them are choked with accumulations of filth.

IV.—State of house-drains and down-pipes.—The house-drains and down-pipes are in many cases broken, choked, and out of repair.

V.—State of surface drains.—The surface drains are blocked with foul matter, latrines are allowed to discharge into them, and the drains themselves are often used as latrines.

VI.—Neglect of road scavenging.—The scavenging of the roads is imperfectly carried out; the staff is inadequate for the work; and the sunsoil has become dangerously polluted.

VII.—State of compounds and court-yards.—The condition of the compounds and court-yards of houses is in many cases extremely filthy.

VIII.—Pollution of wells.—Wells in court-yards are contaminated by the percolation of sewage impurities from the soil.

IX.—State of cowsheds and stables.—Cowsheds and stables are situated in thickly populated places; their construction is faulty; they are

greatly over-crowded, and their flooring is soaked with sewage which pollutes the wells on the premises.

X.—State of hackney carriage stands.—Hackney carriage stands are badly constructed and not properly cleaned.

XI.—Condition of bustis.—Bustis are badly drained and imperfectly ventilated; the huts are too close together; the latrine arrangements lead to the pollution of the soil, the roads and lanes are too narrow, and conservancy is imperfectly carried out.

In view of these facts, I am to ask that, with the permission of the Commissioners, you will furnish any information that may be forthcoming in explanation of the apparent failure of the Health Department to deal effectively with the state of things described above; and will forward that information to the Medical Board, with an expression of the opinion of the Corporation, and with such remarks by yourself as may appear to be called for. Copies of all papers referred to should be annexed. The points to which the Board desire especially to invite attention are indicated in the following questions:—

(1) Are the facts correctly stated in the reports of the Sanitary Officers and the Civil Surgeon of the 24 Parganas?

(2) Have those facts been reported to the Commissioners by the Health Officer, and with what results?

(3) Is the law as it stands sufficient to enable the Commissioners to deal with the facts reported?

(4) Is the law enforced, and if not, why not?

(5) What duties have been assigned to the Health Officer under section 41 of Bengal Act II of 1888? Have these duties been duly carried out?

Finally, I am to express the hope that the Commissioners, who have already shown a laudable desire to co-operate with the Medical Board in respect both of special measures of conservancy and of the regulations recently passed under section 334 of the Act, will furnish the Board at as early a date as possible with all the information necessary to enable them to complete the present inquiry."

We hope the Commissioners, like their Health Officer, will not resent the enquiry, with a view to avoid it. If the constitution of the Board is bad, it should be rectified.

THE late Dr. Robson Scott, the first Secretary to the Medical Board, who was deputed to Bombay to study the plague there and the arrangements made to combat it, in October 1896, reports:—

"It is believed that it (plague) began insidiously in the end of July or the beginning of August, and as the nature of the malady was not detected until the beginning of September, it was found impossible to trace out the origin of the infection."

Regarding preventive measures, he says:—

"The large godowns in the ground floors of the buildings in which the disease has appeared have been closed, the goods stored in them are not allowed to be sold. Disinfection is carried out by washing the walls, etc., with chloride of lime, phenyle, and a mixture of sulphur and tar is allowed to smoulder day and night for six consecutive days inside.

A native policeman is placed in charge of each affected block of buildings to see that these measures are carried out.

2. Isolation.—Patients whose consent can be obtained are sent to the isolation hospital. A resolution was passed by the Bombay Government permitting enforced removal to hospital for those cases which could not be properly segregated in their houses. It was found impossible to carry this plan into effect owing to the strong objections of the relatives. On several occasions riots were nearly caused by the medical attendants pressing their patients to go to hospital.

3. Segregation of cases in their own houses. This may be said to have appeared only upon paper. The relations and friends of the patient are allowed to pass and into the infected rooms as often as they please. There are no means taken to prevent any one from passing into the quarters where cases are, no sheets soaked in antiseptics are hung over the doorways, and in fact nothing seemed to have been done to prevent the disease spreading with the exception of burning sulphur in the passages. In some single-roomed shops on the ground floor in which cases had occurred, the patients were left lying, and no precautions were taken at all to prevent the spread of the disease.

When a case dies, the room in which the death takes place is shut up, all apartments are closed, and the apartment is fumigated day and night for six consecutive days. The occupants at the end of six days are allowed to return and live there again. All infected tenements are washed down inside and outside with phenyle and water (5 to 2 per cent). This is applied by means of a fire hose. This is more applied to the outside of the house than to the inside; in other words, it is not done thoroughly. Wooden staircases are scraped down, and so are the floors.

Pure phenyle is poured into all the seething places in each story, and also into the house, pipes and drains. The privies in each story are treated in the same way. Bichloride of mercury was used in some of the dirtiest houses. The Municipal Inspectors make a house to house visitation daily in the affected area for the purpose of detecting concealed cases. Private practitioners have been warned to notify all cases of plague. The inhabitants in the affected districts have been asked to report all cases of fever to the Municipal authorities. All reported cases are seen by a medical man in Municipal employment. In cases of death all the clothing and bedding is burned. The sweepings and refuse from the affected houses are removed by the municipal carts, and the only precaution taken is to disinfect the carts."

HIS remarks about Calcutta are:—

"During last May I was engaged in making enquiries into the results of the preventive method of dealing with cholera by inoculation, and when carrying out my investigations, I visited all the wards in Calcutta, and I could not help noticing the most disgraceful state of unsani-

tation into which the town has been allowed to drift; mainly, I should say, from the deplorable want of strict supervision. I was brought into contact with the ward Medical Inspectors: most of them looked as if they did not over-work themselves, and when they made inspections, they must have done so with their eyes shut. I very nearly reported two or three of them to the Health Officer, and I wish I had done so now.

Medical Inspectors should not be allowed to keep private dispensaries or to carry on private practice, as private professional work is so apt to interfere with official duties."

DR. J. O'Brien writes on the 15th November to the Secretary, Medical Board:—

"Comparing the infected localities in Bombay with our Burrabazar would be a serious injustice to the former. The part of Calcutta most nearly resembling the infected quarters in the Mandvi district is the Harrison Road. The houses infected are nearly all palatial edifices of from three to six storeys. The chief sanitary defects in them when the plague broke out were (1) over-crowding, (2) defective removal of faecal matter."

While thus condemning, he gives a certificate of health to Calcutta:

"With regard to our prospects in Calcutta, we may, I think, feel confident that anything in the shape of a serious outbreak of this dread disease will be rendered impossible under the system of quarantine and strict sanitary supervision which has been recently introduced by Government and the Municipality. We may also obtain comfort from the thought that Calcutta does not appear to have been subject to invasions of the plague for long years past. From my own knowledge of the history of the town during the present century, and from enquiries that I have made among the senior medical practitioners, I cannot discover that there has been any epidemic within the past hundred years, though it has prevailed in many other parts closely connected by trade, &c., with the metropolis."

MR. F. H. B. Skrine, in his Memorandum on the Material Condition of the Lower Orders in Bengal during the ten years 1881-82 to 1891-92, writes of the Bhagalpur Division which includes the districts of Malda, Purnea, Bhagalpur, Monghyr and the Sonthal Parganas:—

"The necessity of feeder roads linking the railway with the centres of commerce is even more felt here than in other Divisions, and the paucity of the resources at the disposal of the District Boards is a great drawback to the development of trade. The latter is indeed at a very low ebb at present. In ordinary years a large export of wheat, pulses, and oil seeds, takes place in all the districts: while Malda and Purnea export silk, indigo, jute, gunny, and hides. Owing to a succession of inferior harvests, the outward movement of food-grain and oilseeds declined as a whole, though high prices and depressed exchange tempted holders of old stocks of wheat in Bhagalpur and Malda to unload for the benefit of the English market. The shrinkage of the export trade has made itself felt on the imports. Monghyr, which ordinarily imports rice, took less than usual; and what is more significant of a reduced purchasing power, the imports of salt, declined."

* * * The trade with Nepal has been stimulated by this addition of our railway system. We take grain, fowls, ghee, orange, cattle, timber, blankets, and wollens from the Nepalese, and send them metals, salt, piece-goods, kerosine oil, and sugar. * * * Prices rose in response to failures of supply and a large demand for exportation; but the upward movement was not so marked as in some other districts. Wheat sold for 32 lbs. per rupee in 1889-90, and for 25 lbs. during the current year. Rice rose from 36 to 24, and pulse from 37 to 33. It is worthy of note that the prices of wheat and rice are the same in both Divisions of Bihar, and that the average price is identical in Divisions so remote as Bihar, Chittagong and Rajshahi. The Chota Nagpur rayyet alone is precluded by its miserable roads and vast and thinly-peopled country from participating in the gain from high prices."

The Patna Division includes the districts of Champaran, Muzaffarpur, Darbhanga, Suran, Patna, Gaya and Shahabad, and is more thickly peopled than the Bhagalpur Division. Of this Division, Mr. Skrine says:—"With a large roadless income, cheap labour, and a plentiful supply of nodulous limestone, one of the best of materials, the Patna Division is better supplied with roads than any other portion of the province. Trade has thus greater facilities in this Division than in any part of Bengal, the eastern districts alone excepted, and the advantage to the cultivators of cheap communication and a choice of markets, cannot be overrated. * * * The imports into the Division are pulses and food grains, salt, spices, piece-goods, kerosine oil, oilseeds, coal, iron and hides. A considerable increase is noticeable as regards the first, and a decrease in that of salt. * * * The rise in imports of food grains, and the heavy drop in salt, piecegoods and kerosine oil, indicate a diminu-

tion in the purchasing power of the masses. Exports include rice, wheat, pulses, oilseeds, indigo, sugar, hides, and clarified butter.

* * * The year 1891-92 was one of deficient and badly distributed rainfall, the divisional average having been 28.55 as compared with a normal of 45.13 inches. As in 1873, the year prior to the Bihar famine, the rains ceased prematurely in August, and during the two succeeding months, the fall was less than half the average, the result was ruin to the *dhadoi* harvest of inferior grains, most valuable in south Bihar, and to the great rice crop in areas unprotected by canals; drought succeeded which lasted from October to February, and did immense damage to the cold-weather crops, opium, sugarcane, oilseeds, potatoes, and pulses."

WE have selected these districts, because they are to be the greatest sufferers in the present famine. The Bhagalpur division has an area of 20,511 square miles and a population of 8,063,160 or 418 to the square mile. The Patna division comprises an area of 23,675 square miles, with a population of 15,811,014 or 667 to the square mile. The rainfall during this year has been as scanty as in 1891-92, other things remaining almost the same. But the sufferings this year threaten to be greater because of the general scarcity in the surrounding districts. The price of common rice and wheat is almost the same, averaging 8 seers per rupee. In 1891-92 rice sold at 12 seers per rupee and wheat at 16 seers. The bordering districts of the North-West Provinces are as bad as regards prices of food-grains. West Bengal fares a little better, where scarcity bordering on famine may be said to have taken place. We do not yet know what would be the supply from Nepal. Perhaps the recent renewed friendship between the two Governments will facilitate exports from Nepal and that there will be no occasion for that Durbar to prohibit export of rice. The present distress is distinguishable from previous famines in that there is not only want of food-grains but of money to buy them. Russia has already begun collecting it, but our own Government is still hesitating.

AFTER an end of reports and consultations, preparation of statistics and expenditure of stamps and stationery and employment of extra clerks, the Bengal Government have come to the conclusion that there is a total failure of crops throughout the non-irrigated parts of Dumbhanga, Muzaffarpur and Champaran. It has also been decided to form, at once, in these affected areas, relief charges. Relief will come by and by.

THE total of stocks of rice in and around Calcutta in the first week of December 1896, according to the report issued by the Statistical Department of the Government of Bengal, was 11,70,499 maunds. In the same period of 1895, it was 16,06,373. Deducting 1½ lakhs maunds for probable exportation by sea, there remains 10 lakhs maunds for home consumption. There is thus no diminution in the stock reported for the last week of November.

DURING the week ending the 21st November 1896, 60,055 maunds of food grains were imported into Calcutta, from the Indian ports, while the exports to Indian ports amounted to 33,268 maunds. The foreign ports took away from Calcutta 1,08,691 maunds, and gave it only 11 maunds.

REIS & RAYYET.

Saturday, December 12, 1896.

SANITATION OF CALCUTTA,

OR,

A GLIMPSE INTO THE PAST.

ACCORDING to Captain Hamilton, it was Job Charnock who selected the site that has developed into the capital of the British Empire in the East. The attraction the place possessed was "a large shady tree," although, in other respects, as Captain Hamilton adds, "he could not have chosen a more unhealthy place on all the river." In Pinkerton's *Voyages and Travels* there is an account of the city given by Captain

Alexander Hamilton who visited India between the years 1688 and 1733. The Captain says :

"One year I was there, and there were reckoned in August about twelve hundred English, some military, some servants of the Company, some private merchants residing in the town, and some seamen belonging to the shipping lying at the town, and before the beginning of January there were four hundred and sixty burials registered in the clerk's book of Mortality."

To this, Mr. James Randal Martin, subsequently, after a summary, added :—

"In more recent times it was the custom of the European inhabitants of Calcutta to meet on the 15th of December of each year to congratulate each other on their escape from the period so emphatically marked by Captain Hamilton ; but though this is no longer considered necessary on account of the insalubrity of the place, still I think it will not be difficult to shew that we are far indeed from having effected for our 'emporium' all that might, or ought to have been done for it."

Again :—

"In Calcutta we have no longer such terrible epidemics as those of 1757 with its cold stage of 12 hours, and that of 1762 which carried off 50,000 Blacks and 800 Europeans. * * * Stavorinus speaking of the sort of sickness and fever which prevailed among the inhabitants of Calcutta during his visits (1768-71) says that it generally sweeps away those who are attacked by it in the space of three days. * * * Of Major Kilpatrick's force of 240 men stationed at Fulta, not 30 of the whole detachment, according to Mr. Ives, were left alive between August and December, 1756, by one of these epidemics. The same authority adds that the number of men buried in Bengal amounted to more than half of all who died in the several hospitals in India during the whole term of General Watson's command, a period of three years and one month. * * * Dr. Bogue, who also served in Watson's Fleet, says that out of three ships of the line and a twenty gun ship, and those not fully manned, they lost in six months upwards of 200 men, most of whom died of these fevers ; so much worse was the climate of Bengal in those times than that of any other port in our Eastern possessions."

The first step taken to sanitise Calcutta was made by the Marquis of Wellesley. By a minute, dated the 10th June 1803, he appointed a Committee with special instructions, viz.,

(1) To take the level of the town. (2) To examine the relative level of the river during the rainy season. (3) To prevent the stagnation of rain water in Calcutta and to cleanse the town. (4) To consider the establishment necessary for cleansing the drains and water courses. (5) To take into consideration all places of interment. (6) To examine the condition of bazars, markets of meat and slaughter houses in Calcutta. (7) To enquire into all existing nuisances in the town and vicinity of Calcutta. (8) To examine the situations for opening new streets and roads. (9) To suggest other plans and regulations to promote health, convenience and comfort of the inhabitants of Calcutta. (10) To submit an estimate of the expense required to complete all such improvements.

It does not appear how the enquiries were made and how they ended. It was not, however, till 1835 that a regular movement was started in that behalf. In April of that year Mr. (afterwards Sir) James Randal Martin addressed a letter to the Governors of the Native Hospital for establishing a Fever Hospital. He sent his "Note on the Medical Topography of Calcutta and its suburbs, chiefly with reference to the condition of the native health" on the 24th February 1834, pointing out what he called the worse than Batavian condition of the city. The Governors took up the subject and met to consider it on the 20th May 1835. At this meeting Mr. Martin submitted a further explanatory note. Other corroborative statements were forwarded by Dr. Vos, the Police Surgeon, and Mr. Bramley. A joint note, the production of Dr. Jackson and Babu Ramcomul Sen, was also sent. The Governors accepted the suggestions and formed a sub-committee, consisting of Sir Edward Ryan, the Lord Bishop of Calcutta, Sir J. P. Grant, C. W. Smith, Esq., Chairman, Babu Ramcomul Sen, Babu Raj Chunder Dass, Babu Radhakanto Deb, S. Nicolson, Esq., J. R. Martin, Esq., and Dr. A. R. Jackson.

On 1st June 1835, agreeably to their resolution, the Committee sent Mr. Martin's paper to Sir C. T.

Metcalf. Mr. Martin's paper was printed and circulated among the Magistrates of the town and suburbs, with directions to report thereon. On the 18th June the sub-committee convened a public meeting in the Town Hall, presided over by C. W. Smith, Esq., to consider the formation of a Fever Hospital.

At this meeting Radhamadhub Bannerjee, Russomoy Dutt, Rustomjee Cowasjee, Agakurboli Mahomed, Mothooranath Mullick, Raja Rajnarain Roy, Mahomed Mahedy-Muskey, Muttylal Seal, Bissonath Muttylall, and Dwarkanath Tagore were made members of the committee. On the 12th August a second public meeting was held.

We refer to the details of the Fever Hospital Committee, because this was the first occasion when Europeans and Natives combined to collect subscriptions for a public cause and the first time when a regular investigation was made into the sanitary condition of the town and its suburbs. On the 30th April Mr. Martin addressed a letter to Lord Auckland, enclosing the proceedings of the committee. On the 24th May his lordship acknowledged the communication, approving of the suggestion to establish a hospital with dispensaries attached and the extension of medical education.

In a further communication on the 21st June he recommended the formation of a more general committee not only to consider the question of the Fever Hospital but also the general question of the sanitation of the town. The enlarged committee consisted of Sir E. Ryan, Sir J. P. Grant, C. W. Smith, Esq., Chairman, Babu Ramcomul Sen, S. Nicolson, Esq., J. R. Martin, Esq., Dr. A. R. Jackson, Rustomjee Cowasjee, Esq., Dwarkanath Tagore, Esq., Russomoy Dutt, Esq., H. H. Cockerell, Esq., and A. Rogers, Esq.

There were also on the committee Babu Raj Chunder Dass who died in 1836, the Lord Bishop and Babu Radhakant Deb. On Mr. Roger's going home, Mr. R. S. Thomson was appointed in his place, while Babu Prossonnocoomar Tagore succeeded Babu Ramcomul Sen resigned. The name of Mr. J. Young was added to the list. Dr. Jackson went to Europe on the 3rd February 1838, and on the 7th August 1839 Mr. Cockerell died. On Mr. Smith's

The Indian Association for the Cultivation of Science.

210, Bow-Bazar Street, Calcutta.

(Session 1896-97.)

Lecture by Babu Ram Chandra Datta, F.C.S., Monday, the 14th Dec., at 4-15 P.M. Subject : Oxy-acids and Phosphorus (concluded.) Silicon and Boron.

Lecture by Babu Ram Chandra Datta, F.C.S., Tuesday the 15th Dec., at 4-15 P.M. Subject : Classification of the Metals and their Metallurgy.

Lecture by Babu Rajendra Nath Chatterjee, M.A., Wednesday, the 16th Dec., at 6 P.M. Subject : Atwood's Machine.—Balance and Laws of Pendulum.

Lecture by Babu Ram Chandra Datta, F.C.S., Thursday, the 17th Dec., at 4-15 P.M. Subject : Lead and Silver.

Lecture by Dr. D. N. Chatterjee, B.A., M.B., C.M., Thursday, the 17th Dec., at 5-15 P.M. Subject : Circulation.

Lecture by Babu Ram Chandra Datta, F.C.S., Friday, the 18th Dec., at 4-15 P.M. Subject : Mercury.

Lecture by Babu Ram Chandra Datta, F.C.S., Saturday, the 19th Dec., at 3 P.M. Subject : Copper.

Lecture by Babu Girish Chandra Bose, M.A., F.C.S., F.R.A.S., &c. Saturday, the 19th Dec., at 4-30 P.M. Subject : Histology of Plants—Tissues.

Lecture by Dr. Niranjan Sirkar, M.A., M.D., Saturday, the 19th Dec., at 6 P.M. Subject : Histology—Nerve Endings.

MA HENDRA LAL SIRCAR, M.D.,
Honorary Secretary.

Dec. 12, 1896.

proceeding to the Cape, Sir J. P. Grant was appointed Chairman. The Secretaries were successively G. J. Gordon, Esqre., W. C. Hurry Esqre., and Babu Russomoy Dutt. After five years, 1835 to 1839, the committee submitted their final report to Government. Containing a mass of testimony from medical and lay men, that report is an evidence of arduous labour.

On the 19th November 1836, two members, Sir John Grant and Mr Rustonjee Cowasjee, sent in their inspection report, from which we make the following extract :—

"We have passed through the greater part of the Roads and Lanes in the Native parts of the Town, bounded by Lall Bazar, Clive Street, Mutchooa Bazar, and College Street. Setting out from Tank Square, we passed through Old China Bazar, passed the Armenian Church up to Burra Bazar, through all the windings of which we passed as far as the Mint; from thence to the Portuguese Church, Moor-gheehatah, along the Chitpore Road to Mutchooa Bazar, and back through Colootollah Road. Through several of the Lanes and Alleys we could not pass, the same not being wide enough for the admission of any wheeled carriage or cart. The whole of this space with the exception of some places near College Street, is most thickly, inhabited; the houses and shops adjoin; and though not lofty, are sufficiently high to exclude sun and air; the free circulation of the latter of which is effectually prevented by the extreme narrowness, sharp angles, and perpetual tortuosities of the Streets; few Streets being more than a quarter of a mile in length in the same direction, and many not so much; none of the Streets, except those to be presently mentioned, much exceeding twelve feet between the front walls of the opposite houses, many being much narrower; and of this space from one foot, to one and a half foot in width, being occupied by a kennel on each side. These kennels are apparently two or two and a half feet deep, with brick sides, the bottoms filled with perfectly stagnant water and filth; and the tops covered, at distances of from one foot to two feet and two and a half apart, with buildings from six to ten feet in length, which in a few places are the entrances to houses; but which in all other instances are the supports of the platforms used as shops; which platforms are erected immediately over the kennel, from one foot to three feet above it, the space between the bridge and the platform being closed to the front; so that no part of the kennel is accessible for the purpose of cleansing it but the above mentioned intervals of one, two, or two and a half feet in length, at various distances, of not less than six, or more than ten feet from each other; while the whole stench freely escapes into the streets and houses."

The mortality of the time can be guessed from the evidence of Pundit Madonsoodun Goopto Koberuttan. We retain the spelling of the reports to show what improvement has been effected in this direction under the impulse given by Sir W. W. Hunter. Pandit Goopto stated that the "fevers are the most prevalent diseases; bilious, remittent and intermittent; that enlargement of the spleen is the general termination of the two last descriptions of fevers; that diarrhoea, dysentery, dyspepsia, rheumatism and venereal disease are the most prevalent diseases in the town, among the Native population." The committee, after full consideration of the various matters of cleansing, drainage, water-supply, ventilation and the fever hospital, sent in their report, dated Tuesday, the 7th January 1840, signed by J. P. Grant (Chairman), C. W. Smith, J. Young, J. R. Martin, Prossonnoocomar Tagore, R. Scott Thomson, Dwarka Nath Tagore, Rustonjee Cowasjee and Russomoy Dutt. It is a volume of 245 pages, quarto, the concluding paragraph of which runs thus :—

"It is no small satisfaction to your Committee, that the main objects contemplated for the improvement of the Town by this accomplished statesman (Marquis of Wellesley), six and thirty years ago, as then demanding the immediate attention of the Government of this country, have been brought to your Honour's notice as forming part of the various subjects of this their Report, and they entertain no doubt that your Honour will agree with him in his opinion, that the state of the Capital of the British empire in India claims that the Government should bestow upon it its prompt and serious attention as constituting one of its primary duties, and that among these duties is included that of contributing, in a just proportion, to the expense, which may be requisite to render it a healthy, and convenient residence for those in health—to pro-

vide it with ample, well-endowed, and well-regulated Hospitals for the sick, and the poor—and to bestow upon it generally that 'degree of order, symmetry, and magnificence in its Streets, Ghats, Wharfs, and Public Buildings,' which may not only 'tend to meliorate the climate, and to secure and promote the objects of a just and salutary system of Police,' but may give to it, in all respects, the character befitting the station, which it ought to hold among the Cities of the world."

OUR LONDON LETTER.

November 20.

Great Britain. On the evening of the 13th instant when the last mail closed, three remarkable speeches were delivered, one by Mr. Chamberlain at a complimentary banquet given him by the Chamber of Commerce at Birmingham, the other two by Lord Lansdowne and Sir M. Hicks Beach at the annual Colston dinner at Bristol. Mr. Chamberlain's theme was Commerce and his remarks proved again, if it were necessary, that he is a far-sighted, clear-headed Imperial statesman. He pointed out with amazing vigour how when Great Britain expands itself, it does so for the benefit of mankind. His words were, referring to the jealousy of foreign nations, "we, in our colonial policy, as fast as we acquire new territory and develop it, develop it as trustees of civilization for the commerce of the world. We offer in all these markets over which our flag floats the same opportunities, the same open field to foreigners that we offer to our own subjects, and upon the same terms. And in that policy we stand alone, because every other nation, as fast as it acquires new territory, seeks at once to secure the monopoly for its own products by preferential and artificial methods." It is interesting to notice that we alone have been successful, astonishingly successful, in making these acquisitions profitable. Every addition to the colonial possessions of France or of Germany adds immediately and continues to add, to the latest date, a heavy burden upon the taxpayers of the mother country." He was exceedingly severe upon the fanatics, the possessors of the nonconformist conscience more especially, who agitate for the relief of the Armenians, while condemning the Dongola and Ashantee expeditions. And he added these expeditions have "I believe, diminished the sum of human misery by a greater amount than even if we had secured the destruction of the Turkish Empire." He went on to offer an energetic protest against those pessimists who are continually foretelling the decadence of English trade, with special reference to those who cry out that Germany is distancing us in the race.

From actual figures taken over a period of ten years from the Board of Trade returns and Consular reports, he proved to demonstration we are still far in the van, and are so far ahead of Germany, that practically she can never overtake us. He admitted however that "in certain branches of our trade, in particular industries, particular classes of goods, we have been outstripped by our competitors, and have lost trade which we ought to have maintained."

Then he found the cause for this in the "too great independence of our manufacturing population," including in that term "all classes, the manufacturers themselves, and their work people" and he pointed out with much force, that if we were to maintain our supremacy, our manufacturers must consult the taste of their customers, and not endeavour to thrust upon them goods they do not want. I am sorry to say this remarkably able speech has roused the wrath of the Radicals because of the reference to the Dongola and Ashanti expeditions, and even the "Westminster Gazette," usually so fair and temperate, attempts to cast ridicule on Mr. Chamberlain's Gospel of Commerce. The editor makes the common blunder of attributing the historic phrase "a nation of shop-keepers" to Napoleon the Great, whereas Napoleon borrowed it from Adam Smith who made use of it in his great work on the "Wealth of Nations."

Your late Viceroy at the Colston banquet made a very able speech. He dealt in a thorough and comprehensive fashion with the too much neglected subject of the "needs of our army." The only regret is he thought it necessary to contrast the money spent on the navy with the much smaller estimates allowed for the army. That arch-blunderer Lord Wolseley again put his foot in it, at the Guildhall banquet, by his reference to the navy. So the "Times" writes, "Nothing, indeed, that Lord Lansdowne said was calculated to offend naval opinion in the same degree as Lord Wolseley's unfortunate observation at the Guildhall banquet."

I enclose another most interesting speech of Mr. Chamberlain's at the Jubilee dinner of the Edgbaston Debating Society. Not that I ask you to incorporate it in this letter, but some week you might find room for it. It is a most interesting speech, and might be the means of stimulating the senior students of the Government and Missionary colleges to start one or more debating societies. Edinburgh University has long been famous for such societies. The oldest, founded in 1764, the "Speculative," has been the nursing ground of our Barristers and clergy. On its roll it bears the illustrious names of Walter Scott, Jeffrey, Cockburn, Lockhart, Wilson and many others. Besides it, there are the "Dialectic" and "Diagnostic." All these have had an

important bearing on the education of Edinburgh University students. It is so long since I left Calcutta that it is possible you may have more than one already established. If not, now is the time to begin. I feel sure some of your native friends of the long robe would be willing to lend a hand. Care would have to be taken to secure the help of a few seniors, so that order might be maintained in the course of the debates. I shall be glad to hear your views on this subject.

Dr. Temple, Archbishop designate. Mr. Labouchere has the following in "Truth":

"Bishop Temple's translation to Canterbury would seem to have been prompted by the rule of contraries. The late Archbishop was before all things courteous, mildmannered, and conciliatory; his successor is conspicuously brusque, high-handed, and overbearing. If Lord Salisbury's selection was not prompted by the desire to have an Archbishop as different as possible from the last, the appointment must then be taken as a recognition of Bishop Temple's right-about-face on the Education Question, and his activity in support of the Athelstan Riley movement, and of the abortive Education Bill of last session. Doubtless, the most potent motive was that of putting the Church's most prominent fighting man in the position where he can best render support to the Government in their next legislative effort on behalf of Church Schools.

Whatever qualifications Bishop Temple might have had for the Primacy twelve years ago are now more than counterbalanced by his age. To appoint any man, however hale and vigorous, to an administrative post of such weight and difficulty within a few weeks of his seventy-fifth birthday is undesirable on every ground, and more especially for the bad example thus set to the innumerable prelates and incumbents who are to be seen sticking to their posts for years after their powers have failed. Dr. Temple's abilities as a ruler and organiser are denied by no one, but his work both at Exeter and in London has been marked by conspicuous blunders, and his jobbery has been a scandal. It is to be hoped that he will at any rate not carry with him to Canterbury his free-and-easy ideas as to the use of parochial endowments for lightening the burdens of Bishops without reducing their emoluments."

The Archbishop with his cranks and fads about temperance, has ever since his nomination got himself into hot water with one fully as capable as himself to engage in controversy, Dr. Mortimer Granville. The latter writes: "I was honoured with a good deal of indiscriminating abuse in 1891; why am I now resurrected for the purpose of being misrepresented?"

Each year's experience deepens the conviction that Dr. Temple and those who see with him are doing well intentioned work in a wrong and mischievous way. The hypothesis that total abstinents live longer than rational drinkers is wholly groundless. The fact is Dr. Temple has been able to throw off the overbearing swagger he learned when headmaster of Rugby. In Archbishop Tait's life you can read a painful account of how in the grounds of Addington he attempted to ride roughshod over the then head of the Church of England. His treatment of the humbler laity in the Diocese of London was a scandal. A sycophant of any layman of title, he was never so happy as when snubbing and insulting churchwardens of humbler social status. Of course, as Archbishop he is withdrawn from the opportunity of displaying his harsh and overbearing temper. But I hope his episcopal brethren will know how to look after themselves. One at least will not tolerate any exhibition of impertinent arrogance, the Bishop of Hereford, Dr. Percival.

BOOKS.

"The Empire of Blood" by the Rev. E. M. Bliss (an American Missionary to Turkey) seems to give in moderate compass and with judicial impartiality, a sketch from his own experience both of Turks and Armenians. He does full justice to the good side of the Turkish character, and he endeavours to enlighten the fanatics as to some evil qualities of the Armenian. The fact is much of the ill-feeling existing between the Turk and Armenian is due to the latter being, as everywhere where he has the opportunity, the blood-sucker and usurer. Indeed, it is just an exaggeration of the anti-Semitic feeling in Germany. Were you to believe Lady Somerset, or Dr. Dykes of the Presbyterian College here, the massacred Armenians were all holy men martyred for their allegiance to the Founder of Christianity. Anything more absolutely contrary to the fact could not be maintained. Such fiction from Lady Henry Somerset, one is prepared for, because like Mrs. Chant, her fad is notoriety. To be before the public as the almoner of Claudius Clear and Hodder and Stoughton, is as the very "breath of her nostrils." "To do good by stealth" is not her role. How much more useful she would be to her Armenian refugee friends at Marseilles if, instead of spluttering about with weekly letters in the "British Weekly," she would only bring hundreds of them to settle on her beautiful property at Reigate! But, while allowance must be made for her ignorance, the same cannot be said for Dr. Dykes. He is the Principal of the Presbyterian College here, which counts students all told, fourteen! He has two, if not three Assistant Professors. Let us say two. That gives an average of 4-2/3 of a student to each Professor. So they must have ample time at their

disposal to keep themselves abreast of current events. And yet Principal Dykes at the famous Conventicle at the City Temple, spoke the most arrant nonsense amid the deafening plaudits of the old women (many of them men) present.

"New Glosses on Gordon" by Mr. Boulger is making a sensation. Kinglake wrote of Gordon as a "really phenomenal man, whose romantic elevation above all that is base and common has made him a sort of warlike and heroic Redeemer." Mr. Boulger does not spare Lord Cromer or Lord Wolseley. Of Lord Cromer he writes: "Whoever was to blame afterwards, the first against whom a verdict of guilty must be entered, without any hope of reprieve at the bar of history was Sir Evelyn Baring," whom he accuses of "having from motives of personal spite and jealousy, retarded Gordon's departure by seven weeks, and that delay, I repeat it solemnly, cost Gordon his life." Then turning on Lord Wolseley he shews, to his own satisfaction, that Gordon was sacrificed to Wolseley's timidity and love of a "scientific" advance. Such men as Oatram or Havelock would have rescued Gordon, but Wolseley, thinking only of himself, as he has throughout his selfish career, cruelly sacrificed the immortal Gordon. Mr. Boulger's contention is, that if on January 3rd when Sir Herbert Stewart reached Jiddul, Wolseley had insisted on forced marches, the Nile would have been reached by the 7th or 8th and Gordon saved. But Wolseley has "no bowels of mercy" and although he has on his conscience (if he has one) his abominable treatment of Sir Birle Frere at Natal, and the responsibility of leaving Gordon to die a martyr's death, he turned up at the Lord Mayor's banquet on the 9th covered with orders and his brutally cynical smile, and seemed to say "Look at me. I am the greatest soldier of all time, Marlborough, Napoleon and Wellington rolled into one, to make a Wolseley."

Napoleonic Literature. I do not know if your educated countrymen of Bengal take a lively interest in all that relates to the history of the most marvellous man of all time. He placed himself on a level with Cæsar, Alexander and Charlemagne. One of the most remarkable of his sayings at St. Helena was "C. A. C. and I founded our kingdoms upon force. Jesus Christ founded his on love." Two remarkable books illustrative of his career have recently appeared, one in France the other in America. The former is the memoirs of Thiebault, published in five volumes in the original French but reduced to two in the English edition. It abounds in side lights not only on the character of Napoleon but also on the history of the Revolution, as Thiebault was a participant in the whole game from the date of Louis the 16th's flight until he and Marie Antoinette were brought back prisoners to Paris. It is a book of wonderful interest. The American issue is published by Macmillan and is called "The New Life of Napoleon." The "Times" in its review opens with the remarkable sentence, "It is curious that the most magnificent of modern lives of Napoleon should come from America, and that the costliest homage ever paid by literature to despotism should be the work of a Republican professor in a New England University." The book is magnificently illustrated, Professor Sloane and his publishers having put under contribution the Museum at Versailles, the Louvre and various private collections. The first volume now issued brings us down to the termination of the first Italian campaign, till 14th July 1797. "We can call to mind no popular history that gives so consistent and so clear an account of those early years, between Brienne and Lodi which are such a key to the character of the man." The only drawback to the Italian reader is the American spelling, "theater," "endeavor," "mold" for "mould," "brusk" for "brusque," etc.

Two works will be found of interest by the students of Philosophy, the "Literary Remains of Professor Croom Robertson," and the "Life of Professor Veitch."

The great event of the week has been the completion by Mr. Herbert Spencer of the monumental work of his life—a System of Synthetic Philosophy. It is an event of such historic interest that I give for the benefit of your University students the "Times" leading article (not a review) in full:

"We heartily congratulate Mr. Herbert Spencer on having at length completed the great work of his life—a system of Synthetic Philosophy. The third volume of 'The Principles of Sociology,' published to-day, brings the series to a close. It has been a task of no common difficulty which Mr. Herbert Spencer has accomplished. It has been nothing less than an attempt to exhibit in detail the unity of all knowledge, to show how the separate sciences all come under the same general laws, and can be rightly understood only when they are regarded as forming the constituent parts of one harmonious whole. This has carried him necessarily over a very wide range of work. A volume of First Principles, two volumes of Biology, two of Psychology, three of Sociology, and two of Ethics make up the ten volumes planned six-and-thirty years ago, continuously laboured upon since, and now at last finished. Mr. Herbert Spencer, in his preface to the concluding volume, confesses himself surprised at his own audacity in undertaking so vast a work, and still more surprised at having completed it. He has done it under grave difficulties, and with frequent interruptions from chronic ill-health. But the mind has triumphed over the body. Mr. Herbert Spenc-

cer's energy and perseverance, and resolve to finish what he undertook have enabled him to carry to completion a task which would well have taxed the powers of the strongest; and, often as he has despaired of reaching the end, the end has at length been reached, and he has fulfilled the purpose of his life.

Very few English writers have attempted to go as fully as Mr. Herbert Spencer has done over the field of speculative thought. The unity of knowledge is pretty generally accepted as a point of faith, but it is suffered largely to remain as a point of implicit faith. It was comparatively easy for early writers to have a fairly adequate grasp of the science of their own time. What Aristotle did, and what Bacon and Hobbes essayed to do, was of more easy accomplishment in their day than in our own. The rapid and continuous growth of the separate science has made the work of co-ordination less impossible, perhaps, but it has brought with it enormous and ever increasing demands on the intellectual equipment of those who would seek to grapple with it. How far Mr. Herbert Spencer's latest volume fulfils the promise of 1860, what it does and what, by the author's own confession, it has left undone, and on what points it calls especially for remark, we shall endeavour hereafter in due course to show. Our present concern is with the fact that the system of synthetic philosophy has at length received its last touch and that this stupendous undertaking has, in spite of all difficulties, been finished and launched on the world. It is with no empty form of words that we congratulate the author on his success, and on the pleasure he can now feel in his well-earned emancipation.

Mr. Herbert Spencer has for many years taken high rank as a systematic and philosophic thinker. It was in 1842 that he published his first work, and, many and multiform as have been his literary labours since, all that he has written has been consistent in every way with the views which he then held and expressed. As a writer he has attained a reputation not only in his own country and has exercised an influence not only on English thought. In Germany and in Russia he stands even higher than he does here, and has been more thoroughly studied in the most abstruse and least popularly attractive parts of his books. To Englishmen he is best known as an ardent and uncompromising advocate of individualism as opposed both to State Socialism and to what he considers an undue extension of the ordinary functions of government. He will be thought by many to have pressed his views too far and to have sought to confine the functions of government within too narrow limits. But he has stopped far short of the extreme opinions of some of his professed followers; and just as Wilkes declared that he had never been a Wilkesite, he has a full right to disclaim many of the inferences which have been drawn from what he has written, and have been put forward with the assumed sanction of an authority which he has never given. In the present day, when Socialistic schemes are floating everywhere in the air, it is an excellent thing that the world should be compelled to see that there are two sides to the question, and that, in the judgment of one of our most eminent thinkers, Socialism in all its forms will do more mischief than it so much as attempts to cure. It is largely the spread of Socialism which clouds over Mr. Herbert Spencer's views of what the future is to bring. His confidence in the social progress of the race is not shaken. His doubt is whether any peoples who have suffered themselves to be socialistically organised will be found worthy to enter into the promised land.

Captain A. T. Mahan has completed his "Life of Nelson." It is expected to be ready for publication in March. It will be in two octavo volumes uniform with the author's works on the "Influence of Sea Power," and will contain about 18 photographic portraits and several battle plans.

Dr. Conan Doyle's new novel "Rodney Stone" is out. I believe it has been running through one of the magazines in serial form, but it is now published as a book. It is very highly reviewed. "Rodney Stone," says the "Times," "is distinctly the best of Conan Doyle's novels." It is a story of the days of the Regency, and the few extracts given only make one keenly anxious to secure the book itself.

A few notanda by the way of chit-chat: Mr. Lecky has finished his introduction for the new edition of Swift's Works. Admiral Fitzgerald's memoir of Sir George Tryon, is to be out before Christmas and we are promised a very full and picturesque description of the *Victoria* disaster. Messrs. Hutchinson are about to bring out a novel the scene of which is laid in Venezuela. The title is a curious one, "The Devil tree of El Dorado." Messrs. Sampson Low promise a study of Philip, Duke of Wharton, by Mr. J. K. Robinson, whom Pope immortalized as the "scorn and wonder of his age." In France, Rousset has completed his history of the Franco-German war, and is preparing, in one volume, a popular account of the most outstanding features of that extraordinary campaign. General Tréchu has left behind him two volumes which should possess no ordinary interest, dealing as they do with the siege of Paris, and with the circumstances attending the foundation of the Third Republic in which he took so active and leading a part.

The first volume of Victor Hugo's Letters has been published. Their interest consists in the singular light they throw on this extraordinary man known to the present generation principally as the arch satirist of the Second Empire and Napoleon the Little. One had always looked upon him not only as a staunch Republican, but what is more to his discredit he gave the imprimatur of his illustrious name to Socialists and Communists. And this too after having drawn a pension for many years from the Bourbons and was drawing inspiration from Chateaubriand.

The "Times" reviewer writes:

"There is scarcely a grander passage in his poetry than the following, taken from a letter written from Boulogne to his favourite daughter:—

"All day I was looking at churches and pictures, and then at night I gazed at the sky, and thought once more of you, my Didine, as I watched that beautiful constellation, the chariot of God, which I have taught you to distinguish among the stars. See, my child, how great God is, and how small we are. Where we put dots of ink, He puts suns. These are the letters with which He writes. The sky is His book. I shall bless God, my Didine, if you are always able to read it, and I hope you may."

It would appear that at one time he coquetted with the Buonapartes, as shewn in a letter to Joseph Buonaparte, in which avowing himself a staunch Buonapartist he refers to the Duke of Reichstadt as the "coming man." He was in sober truth "the very weathercock of contemporary politics."

NEEDLESS ALARM.

Whether the suffering which people undergo from disease is more physical than mental is a point not easy to decide. It depends largely on the nature of the disease, and the make-up of the individual. Experience seems to show, however, that in one prevailing disease—indigestion or dyspepsia, the two kinds of suffering are very evenly divided, and both very great, the mental distress being chiefly due to the illusions and deceptions which attend it. For example, though dyspepsia is solely an affection of the digestive organs, it has power to set up disorders in others which always alarm the sufferer, and often perplex his medical advisers. These symptoms or sequences may relate to the head, the heart, the sight, the hearing, the lungs, or to other organs or functions. Take an illustration or two.

"In the spring of 1891," says Mr. Edward Tatham, "I fell into a low, weak state of health. I had a foul taste in the mouth, and was constantly spitting up a thick phlegm. My appetite was poor and after eating I had fulness and pain at the chest—the latter seemed to be puffed or swollen. What made me most anxious was my *breathing*, which came to be so difficult and short that at times I could only catch my breath by an effort. I was led to fancy that something must ail my lungs, especially as so great a quantity of mucus gathered in my throat and mouth. It was usually worse at night, and I got very little sleep on account of it; sometimes none at all. In a morning I would be quite worn out.

"As time went on I became very weak, and was much put to it to get about. I took all kinds of medicines and got no proper relief from anything. In February, 1893, Mr. William Beardsley, grocer, Cotmanhay, told me how he had been cured of a like trouble by Mother Seigel's Curative Syrup. Acting on his advice I got a bottle of this medicine from Mr. Platt's Drug Stores, Ainsworth Road, and after taking it felt quite another man. My *breathing* was easier, and my food agreed with me. I continued using the Syrup, and got stronger and better every day. When I had taken four bottles I was as well as ever, being free from all pain or discomfort. My wife, who has suffered for years from *liver complaint*, has taken the Syrup with the same good results as in my own case. You are at liberty to make any use you like of this statement. (Signed) Edward Tatham, Tatham's Lane, Cotmanhay Road, Ilkeston, Derbyshire, March 21st, 1895."

"In October, 1888," writes another, "I began to feel weak, heavy, and tired. My appetite was poor, and after eating I had distress at the stomach, together with *shortness of breath*, and a good deal of pain across the chest. Sometimes I would be taken with sudden dizziness, as though I must fall to the ground. Cold, clammy sweats used to break out all over me and I trembled from head to foot. Finally, I got so weak I could scarcely walk to my work. Indeed, I had occasionally to leave my work; I have been away as long as a month at a time. In this way I suffered for about two years.

"In August, 1890, Mr. Thompson, the grocer in Church Street, urged me to try Mother Seigel's Syrup. After taking only one bottle I felt better. My food agreed with me and I was stronger. Continuing with this medicine, gradually all pain left me, and I completely recovered my health. Since then I have kept the Syrup in the house for use in time of need. You are free to publish this statement. (Signed) William Mallender, 71, Robinson's Buildings, Newhall, Wath, near Sheffield, October 11th, 1895."

Cases of supposed disease of the heart, of the nervous system, of the kidneys, &c., constantly prove to be, not organic affections of those parts at all, but merely local or functional disturbances caused by the toxic or poisonous principles thrown into the blood by the decomposition or fermentation of food in the stomach; otherwise, by dyspepsia or indigestion. But until they are discovered to be so they are mistakenly treated; and serious, often fatal, results, follow. Until pronounced and undeniable symptoms of organic mischief show themselves (which is not the case once in a hundred times) you may take it for granted that your ailment is some form of dyspepsia, easily curable by Mother Seigel's Syrup, as demonstrated by the two instances cited above.

Sir George Chesney Memorial Committee.

CHAIRMAN :

General Sir Henry W. Norman.

MEMBERS :

The Marquess of Lansdowne, Field Marshal Lord Roberts, Mr. George Allen, Colonel Sir J. Atagh, Sir Stuart Bayley, Mr. William Blackwood, Sir Edward Braddon, Rev. A. G. Butler, Colonel Sir G. S. Clarke, General Sir E. Colten, Sir Auckland Colvin, Sir Juland Danvers, General C. H. Dickens, Sir Mortimer Durand, General Sir W. Stirling Hamilton, Captain Hexi, R. N., Mr. A. P. Howell, Sir W. W. Hunter, Lieut.-Genl. McLeod Innes, General Sir Allen Johnson, Sir H. S. King, M. P., Mr. A. Lawrence, General Sir R. Low, Sir Alfred Lyall, General Sir O. Newmarch, Sir Andrew Scoble, Field Marshal Sir Linton Simmons, Field Marshal Sir Donald Stewart, General R. Strachey, General Sir A. Taylor, Mr. Meredith Townsend, Mr. W. C. Unwin, General Sir George White and General Sir E. Williams.

Memorial

TO THE LATE

SIR GEORGE CHESNEY, K.C.B., R.E., M.P.

A Meeting was held, on the 24th April, at the Royal United Service Institution, of some of the friends of the late Sir George Chesney, to consider the question of the commemoration of his distinguished services as Soldier, Administrator, Statesman, and Author. General Sir Henry Norman presided, and was supported by Field Marshals Sir Linton Simmons and Sir Donald Stewart, and other friends of Sir George Chesney. To carry out the object of the Meeting, a General Committee was formed, which included the gentlemen then present, and in addition, the Marquess of Lansdowne, Field Marshal Lord Roberts, General Sir George White, Sir Andrew Scoble, Sir Alfred Lyall, Sir H. S. King, Sir W. W. Hunter, Mr. Meredith Townsend, General Richard Strachey, Mr. William Blackwood, and others.

The form the Memorial should take was left for the future consideration of the Committee, as it would depend on the amount subscribed, but the suggestions tended towards a bust of Sir George for the India Office, and a medal for valuable contributions to Military Literature. It was resolved to limit each subscription to a maximum of three guineas.

Subscriptions will be received by Lieutenant-General McLeod Innes, 9, Lexham Gardens, Cromwell Road, London, W.

COMMITTEE FOR INDIA :

His Excy. General Sir George White, V.C., G.C.I.E., K.C.B., the Hon'ble Major-General Sir E. Colten, K.C.I.E., Lieutenant-General Sir W. S. A. Lockhart, K.C.B., K.C.S.I., His Excy. Lieutenant-General Sir C. Mansfield Clarke, K.C.B., Major-General J. Duncan, Major-General G. E. L. S. Sanford, C.B., C.S.I., Major-General G. de C. Morton, C.B., Major-General A. R. Badcock, C.B., C.S.I., Brigadier-General W. G. Nicholson, C.B., Captain J. Hext, C.I.E., R.N., Colonel W. S. S. Bisset, C.I.E., R.E., Colonel T. Deane.

Honorary Secretary :

Colonel T. Deane, Simla.

Subscriptions will be received, in India, by Messrs. King, King & Co., Bombay; Messrs. King, Hamilton & Co., Calcutta; and by the Alliance Bank, Simla, and its branches at Calcutta, Cawnpore, Agra, Ajmere, Dujeling, Lahore, Muree, Mussoorie, Rawal Pindi and Umballa. Subscriptions are limited to a maximum of Rs. 32 in India.

By order of the Committee,
T. Deane, Col.,
Hony. Secy.

Simla, 18th July, 1896.

"LINSEED COMPOUND," Trade Mark of KAY'S COMPOUND ESSENCE OF LINSEED.

"LINSEED COMPOUND," a demulcent expectorant for Coughs, Colds, and Chest Complaints.

LINUM CATHARTICUM PILLS, digestive, corrective, and agreeably aperient.

KAY'S CUE CEMENT.—Tops Billiard Cues firmly. "Your Cement is the best I have ever used."—JOHN ROBERTS (Champion), 1866.

KLINX—New white inorganic Cement, almost hydraulic, for Pottery, Porcelain, &c.

COAGULINE.—Transparent Cement, for all broken articles. Manufactory, Stockport, England.

CHESHIRE BIRD LIME.—For Mosquitoes and noxious insects. In tin boxes. To spread on paper, twigs, twine. KAY BROTHERS, LTD., Stockport, England.

Don't Be Blind.

Don't refuse to believe in a thing, till you've tried it. Thousands of people suffer the indescribable tortures of RHEUMATISM because they have never heard of

Little's Oriental Balm

or because they are blind to their own interest and refuse to try it. It is a most marvelous pain killer and relieves rheumatic aches almost instantly. It soothes the nerves, allays inflammation of the flesh and quickly penetrates to the bones themselves. There is no reason why any one should suffer with rheumatism if they have Re. 1 to pay for a bottle of this unfailing remedy. Sold by all chemists.

THE AUTHENTIC WEBSTER.

Revised, Enlarged, and Reset in New Type—

WEBSTER'S INTERNATIONAL DICTIONARY.

2,118 pages, 3,5000 Illustrations, cloth, £1-11s-6d.; half-calf, £2-2s.; half-Russia, £2-5s.; In Two Vols. cloth, £1 14s.

GEORGE BELL & SONS,

LONDON AND BOMBAY.

And all Booksellers.

The Lord Chief Justice of England, in decision of the famous *Alexandra* case, said :

"I have looked, so that I might not go wrong, at Webster's Dictionary, a work of the greatest learning, research, and ability."

The Chief Justice of the U. S. A. said :

"I have used and relied on Webster's Unabridged Dictionary for many years, and entirely concur in the general commendation it has received."

Sir S. Arthur Blackwood, K. C. B., Secretary to the Post Office, says :

"The work has been in general use throughout the Department as a standard Dictionary for many years past."

The United States Commissioner of Education said :

"Webster's Dictionary is in constant use in this office, and is regarded as the highest authority in matters of orthography, pronunciation, and definition."

Prof. Max Müller, Professor of Comparative Philology at Oxford, says :

"There are few books I know so well as Webster's Dictionary. I have used it for more than forty years, and I may say I have learnt English from it. It was recommended to me by Bunsen. I remember well when I asked him which he considered the best English Dictionary, he laughed and said, 'The best English Dictionary is the American Dictionary by Webster.' . . . I see the new edition is not only enlarged, but improved, more particularly in what was its weak point, the etymologies."

Prof. Dowden, Professor of English Literature, Dublin University, says :

"I have looked into it with care, and compared some parts with the corresponding parts of other recently published Dictionaries. What the 'Quarterly Review' said of the last edition may, in my opinion, be said with fresh emphasis of the present edition—that it is the best practical English Dictionary extant. In saying this I have in view a range of vocabulary, accuracy of definition and derivation, aids given by pictorial illustration, and, considered in connection with these, the price."

S. DASSEX & CO.,

Manufacturers, Importers, Repairers and Tuners of all sorts of Harmoniums, Organs and Pianos, &c., 33, Colintonian Street, Calcutta, import materials direct from England and guarantee the best workmanship and finish; are the express manufacturers of

AN INDIAN JOURNALIST :

Life, Letters and Correspondence

OF
Dr. SAMBHU C MOOKERJEE,
late Editor of "Reis and Rayyet."

BY
F. H. SKRINE, I.C.S.,
(Collector of Customs, Calcutta, now Offg.
Commissioner, Chittagong Division.)

The Volume, uniform with Mookerjee's
Travels and Voyages in Bengal, consists of
more than 500 pages and contains

PORTRAIT OF THE DOCTOR.

DEDICATION (To Sir W. W. Hunter.)

HIS LIFE STORY.

CORRESPONDENCE OF DR. S. C. MOOKERJEE.

Orders to be made to the Business Manag-
er, "An Indian Journalist," at the Bee
Press, 1, Uckoor Dutt's Lane, Wellington
Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of
a remarkable man.—Mr. H. Babington Smith,
Private Secretary to the Viceroy, 5th October
1895.

Dr. Mookerjee was a famous letter-writer,
and there is a breezy freshness and originality
about his correspondence which make it
very interesting reading.—Sir Alfred W. Corft,
K.C.I.E., Director of Public Instruction, Bengal,
26th September, 1895.

It is not that amid the pressure of harassing
official duties an English Civilian can find
either time or opportunity to pay so graceful
a tribute to the memory of a native personality
as F. H. Skrine has done in his biography of
the late Dr. Sambhu Chunder Mookerjee, the
well-known Bengal journalist (Calcutta :
Thacker, Spink and Co.); nor are there many
who are more worthy of being thus honoured
than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr.
Skrine that the story of Mookerjee's life, with
all its lights and shadows, is pregnant with
lessons for those who desire to know the real
India.

No weekly paper, Mr. Skrine tells us, not
even the *Hindu Patriot*, in its palmiest days
under Kristodis Pal, enjoyed a degree of in-
fluence in any way approaching that which was
soon attained by *Reis and Rayyet*.

A man of large heart and great qualiti-
es, his death from pneumonia in the early
spring in the last year was a distinct and
heavy loss to Indian journalism, and it was
an admirable idea on Mr. Skrine's part to put
his Life and Letters upon record.—*The Times*
of India, (Bombay) September 30, 1895.

SPECIFICS

for all ordinary diseases, like Fever, Cough, As-
thma, Phthisis, Diabetes, &c., including dis-
eases brought on by irregularities of kinds.
Catalogues, containing full accounts of diseas-
es and remedies, are transmitted on applica-
tion. Prescriptions, with or without medicines,
sent to every part of India and Ceylon,
Cape Colony, and the British Isles, on receipt
(by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from
every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these

diseases are contagious, or that they are
due to the presence of living parasites in the
lining membrane of the nose and eustachian
tubes. Microscopic research, however, has
proved this to be a fact, and the result is that
a simple remedy has been formulated whereby
these distressing diseases are rapidly and per-
manently cured by a few simple applications
made at home by the patient once in two
weeks. A pamphlet explaining this new treat-
ment is sent on receipt of 2½d stamp by A
HUTTON DIXON, 43 & 45 East Bloor St.
TORONTO, Canada.

Scientific American.

VOL. XV.

CALCUTTA, SATURDAY, DECEMBER 19, 1896.

WHOLE NO. 754.

THE PROMISE OF THE SUNRISE.*

[The Tarno Rye, on the anniversary of the mysterious disappearance of Rhona Boswell, who had caused the drowning of Herne "the Scollard," stands in the mouth of his solitary tent in Gypsy Dell. He looks towards the spire of Raxton Church in the distance, over which the dawn is gradually brightening into a gorgeous sunrise.]

I.

Death's year hath passed : again the new-mown hay,
As on that night, perfumes the Dell—that night
Whose darkness seemed more dear than Eden-light—
Fragrant of Love's warm wings and Love's warm breath—
Where here I left her doomed to treacherous death
By Romany guile that lured me far away ;
'Twas here—where petals of the morn are cast
'Mid night's wild phantoms from the spectral past—
'Twas here she made the vow I smiled at then
To show her face some morn when hill and glen
Took the first kiss of Day.

II.

But *now* not all the starry Virtues Seven
Seem strong as she, nor Time, nor Death, nor Night.
What saith the morn ? "Love hath such godlike might
That if the sun, the moon, and all the stars,
Nay, all the spherul spirits who guide their cars,
Were quelled by Doom, Love's high-creative leaves
Could light new worlds." If then this Lord of Fate
When Death calls in the stars, can re-create,
Is it a madman's dream that Love can show
Those eyes I seek within yon ruby glow,
And build again my heaven ?

III.

"The birds," she said, "they knows us *Romany chiest*—
Lenseways the 'Gypsy-maggie' † an' the jay—
They knows the Romany tongue—yis, all we say ;
So, if the Hernes should do away wi' me
'Cause o' the Scollard's death, the birds will see
An' tell the flowers where Rhona's body lies.
The Scollard's strong to strive wi' now he's dead :
Outside the tent o' nights I hear his tread.
You mind them stars reflected in the river
That seemed a snake o' fire ? I see'd you shiver :
It had the Scollard's eyes !

IV.

But when I'm dead, the Golden Hand o' love
Will shine someday where mists o' mornin' swim ;

* Among the Gypsies of all countries the happiest possible "Duk-keripen" (i. e., prophetic symbol of a natural phenomenon) is a hand-shaped golden cloud floating on the sky. It is singular that the same idea is found among races entirely disconnected with them—the Finns, for instance, with whom Ukko, the "sky god" or "angel of the sunrise," was called the "golden king" and "leader of the clouds," and his Golden Hand was more powerful than all the army of Death.

† Gypsy girls.

‡ Water-Wagtail.

You'll see me too, dear, when the sun's red rim
Peeps through the Rookery boughs by Raxton spire,
And makes the wet leaves wink like stars o' fire ;
Then, when the skylark wakes the thrush and dove,
An' squirrels jump, an' rabbits scrabble roun',
An' hares cock up their ears a-shinin' brown,
An' grass an' blossoms mix their mornin' smells
Wi' dingle songs from all the *chirikees*,*
You'll seeme there above."

* * *

V.

I think 'twas here—though now I know not whether
Dead joy or living sorrow be the dream—
In this same tent—round which the branches seem
To stir their whispering leaves as if to tell
The Morn the dreadful secret of the Dell—
I think 'twas here we lived that life together.

[A shape that at one moment seems like a hand, and then a feather of gold, appears in the eastern clouds near the brightening wings of the Spirit of the Sunrise.]

My senses mock me : these wan eyes behold
What seems a hand, a mystic hand of gold,
Traced on the steaming canvas of the mist
Gilding the woof of pearl and amethyst—
A hand or golden feather.

[Beside the Golden Hand Rhona's face appears.]

VI.

Is that a picture in a mad man's eye ?
Or is it Memory, like a mocking elf,
Weaving Hope's tapestry to cheat herself ?
Or doth great Nature, she who garners all
The fleeting pictures Time can limn, recall
The face of her the Romanies doomed to die ?
Or is there glowing a face from brow to chin
Where yonder wings of Morn are widening thin,
Her very face, her throat, her dimpling cheek,
Her mouth—the mouth that love first taught to speak—
Smiling "'Tis I, 'tis I" ?

VII.

THE LARK RISING FROM THE HAY-FIELD.

Birds of the Dell, the veils of morn are shaking !
And see the face of her, ye loving birds,
Who knew your songs—who gave them human words
In those sweet mornings when her breath would mingle
With breath of flowers, and all the dewy dingle
Greeted the Spirit of the Sunrise waking ;
Ye birds who saw her buried—ye who know
Where, conscious of the flowers, she lies below,
But cannot tell yon mourner, for the spell
The monstrous deed hath cast about the Dell,
The man whose heart is breaking !

* Birds.

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

VIII.

THE BIRDS OF THE DINGLE.

She keeps her promise, she who made the vow
 No Romany law, no Romany guile, should ever
 Divide their lives, nor Death's fell malice sever
 The chain the Sunrise forged 'twixt her and him ;
 She keeps her promise ; through the mists which swim
 Love's light is shed from her sweet eyes and brow
 Who vowed to show the lover's *dukkeripen**
 Of hope, the Golden Hand of promise, when
 Fate should fulfil the prophet-river's warning,
 And gaze from ruby-pillared domes of morning ;
 She keeps her promise now.

IX.

THE SPIRIT OF THE SUNRISE.

Though love be mocked by Death's obscene derision,
 Love still is Nature's truth and Death her lie ;
 Yet hard it is to see the dear flesh die,
 To taste the fell destroyer's crowning spite
 That blasts the soul with life's most cruel sight,
 Corruption's hand at work in life's transition.
 This sight was spared thee : thou shalt still retain
 Her body's image pictured in thy brain ;
 The flowers above her weave the only shroud
 Thine eye shall see : no stain of Death shall cloud
 Rhona ! Behold the vision !

X.

THE TARNO RYE.

As on that morn when round our bridal pillow
 The sunrise came and you cried : "Smell the whin !"
 And rose and oped the tent "to let it in,"
 Yon clouds—like molten metal, boiling brass,
 Brightening to gold—are crested as they pass
 With Love's own fire !—yes ! while each gleaming billow
 Rolls o'er the Dell, 'tis Love's own hand that launches
 The self-same Promise through the self-same branches !
 The Promise of the Sunrise !—Oak and ash
 And birch and elm and thorn pass on the flash
 Down to the river-willow !

THEODORE WATTS-DUNTON.

—*The Athenæum*.

WEEKLYANA.

DR. John Hopkinson is evidently an advanced pessimist, and offers a make-weight to the roseate views of Mr. Balfour and Mr. Chamberlain.

"Dr. John Hopkinson, President of the Institution of Electrical Engineers, speaking at the annual dinner of his society last night, said England owed her prominent position to the fact that she was the first to use coal on a large scale. If the employment of that material as a basis of power were to cease, British supremacy would go with it. The Falls of Niagara wasted more power every day than could be derived from all the coal raised in the whole world, and in the future it would be the work of electrical engineers to utilise it, and other waterfalls, for the transmission of power for purposes of traction and industrial undertakings. When that work was fully realised, there would only be two courses open to Englishmen ; they would either have to live on their accumulated savings, or flit to countries having greater water power than their own. In either event, the supremacy of Britain would go."

Who is the "Indian Contortionist" that is now the admiration of England?

"An Indian contortionist gave a remarkable exhibition before a committee of medical men at St. George's Hospital yesterday. The performer, patient, victim, or whatever name he may be called, is Yoga, of the Westminster Aquarium, and his fame has become so noised abroad that from a passing show he has become an object-lesson to young doctors. Yoga was introduced in the theatre as a Brahmin of the high caste, who has forfeited his religious rights by coming to England. He is said to have spent forty years in a cave living upon goats' milk and dried fruits. He appears to be able to reverse the ordinary functions and uses of his joints and ligatures, and to twist and double his arms and legs about in any way he chooses,

* Symbol.

and all of the medical men present yesterday confessed themselves amazed at his marvellous performances."

Our London correspondent who sends the paragraph says the "Indian Contortionist" must surely be a fraud, for no high caste Brahmin would so demean himself. Not necessarily. The Indian is capable of the feat described and with Europeans, even the most knowing, every Brahmin is a high caste one.

THE British Museum have acquired the Wellington letters. We read

"Yesterday the autograph letters and documents belonging to the late Viscount Hill were sold by auction at Shrewsbury by order of the Official Receiver. The documents comprised autograph letters of the Duke of Wellington to his most trusted General, Lord Hill, the latter's own letters, those of Sir Richard Hill, M.P., and the Rev. Rowland Hill, as also letters from Royal personages and historical documents, the whole covering a period varying from 1792 to 1842. The letters and despatches of the Duke of Wellington, addressed to General Lord Hill, dealt chiefly with brilliant military operations, in which Wellington always found so able a coadjutor in Hill. Some of the letters were of a private character, and were written in a most free and friendly manner. They covered the whole of his official life, and were bought on behalf of the British Museum for £600."

LORD Armstrong justifies his name :—

"Lord Armstrong enters upon his eighty-seventh year to-day. His lordship's physical and mental activity is remarkable in a man of such advanced age. Though hydraulics, engineering, and gunnery have been so prominent in his lordship's studies and attainments, it will be agreeable news to many to learn that for a considerable period now (the *Newcastle Journal* announces) Lord Armstrong has been engaged upon electrical research, the result of which will be made known to the world in a publication that is likely to make a sensation in scientific circles. Not the least interesting and important feature of the new work will be the illustrations. These are from photographs made under Lord Armstrong's supervision at Cragside."

THE next extract is interesting in another sense :—

"The children of a Birmingham suburb came in for an unexpected treat the other day, and made such good use of the golden opportunity that the doctors of the district are likely to have a busy time of it. A confectioner's van, full of Christmas stock, capsized, owing to the horse bolting, and there was a glorious smash. The boxes, says the *Sheffield Telegraph*, fell out of the van, and the sweets fell out of the boxes. Chocolates strewed the roadway. Father Christmases lay cheek by jowl with sugar pigs. The driver was thrown from his seat, and so badly hurt that he could do nothing to mitigate the ruin. The horse managed to get clear of the shafts, and fled. In a moment the street was alive with children, who with shouts of glee threw themselves upon the wreckage, and carried off all they could lay hands on."

A CORRESPONDENT of the *Daily Graphic* writes :—

"An amusing echo of the Tell legend has just come before the civil tribunal at Augern, in Southern Austria. It appears that one of the employés at a large sugar refinery in that town had an ambition to repeat the exploit of the Swiss hero, and chose for his living target a schoolboy of the name of Mellyha. In order to make things quite safe, he requested the young Mellyha to wear two hats for the occasion, a tall hat which he borrowed from a bystander, and the lad's own *chapeau de gala*, or Sunday hat. The whole edifice was surmounted by the traditional apple. The Tell legend was not quite realised either in costume or results, for the marksman missed the apple, but pierced the Sunday hat through and through, with the ignominious result that he was sued before the Civil Court to recover damages for the hat, and also had to satisfy a claim of ten gulden from the father 'for anguish and distress caused to him in his feelings as parent.' The boy who personified the young Tell received a severe reprimand and a caution to mind what he was about for the future."

ANOTHER correspondent writes :—

"The abolition of the Buckhounds is not a Ministerial question ; but it is a matter which the Queen herself can and must decide. The popular idea that there is an annual vote for the Royal Hunt is a mistake, for the expenses are defrayed out of the Civil List. About eight years ago the Queen appointed a secret committee to investigate and report upon the expenses of the Household, and the members sent up a private report to her Majesty, in which they strongly recommended the abolition of the Buckhounds ; but nothing was done, in consequence of the resolute opposition by certain members of the Royal Family. This committee consisted of the following thoroughly competent persons : Lord Cross, Lord Welby, the late Earl Sydney, and the late Sir Henry Ponsonby. The Queen certainly has no love for the hunt, but her Majesty is surrounded by persons who are saturated with a most obstructive indisposition to any changes of this description. A motion in both Houses of Parliament would probably strengthen the Queen's hands. It is inconceivable that Lord Salisbury, Mr. Balfour, Mr. Chamberlain, Sir William Harcourt, or Mr. Morley can regard the Royal Hunt with approval."

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 19 SOUTHAMPTON BUILDINGS, HOLBORN, LONDON.

THE Commissioners of Calcutta will specially meet on Monday next, "to consider the points raised in His Honour the Lieutenant-Governor's speech, delivered at Entally, on the 26th November, 1896."

IT is declared in the *Calcutta Gazette* that a piece of land measuring about 4 bighas is required for a public purpose, that is, for filling up the tank called Alankar Dighi of the Katwa Court compound and will be acquired under the Act. The purpose for which the Land Acquisition law is to be enforced is not very clear. Is it that the tank will be acquired to be filled up or that a new tank will be dug to fill up the old with the earth so obtained.

THE market rate of exchange for the fourth quarter of 1896-97 has been fixed at 1s. 2-25/32d., the percentage of salary admissible on account of Exchange Compensation Allowance in that quarter being Rs. 10-14-2 approximately.

FROM the 1st day of January 1897, the institution fees payable under section 71 (a) of the Presidency Small Cause Courts Act, when the amount or value of the subject-matter does not exceed five hundred rupees, will be annas 1½ in the rupee on such amount or value instead of annas two. Another concession to begin with the new year is the increase of double the weight for the same postage of privileged newspapers.

FOR selling adulterated barley powder, Nawab Syed Ameer Hossein has fined a shop-keeper in Harrison Road R. 5, and for selling adulterated arrowroot two other shop-keepers have also been similarly punished by the same Northern Division Magistrate.

THE ferry train carrying *bhoosa* carts, while crossing Sutlej Bridge, caught fire from a spark from the engine and in a few minutes was ablaze. Apprehending danger to the bridge, the train was run over it with full speed to Phillour. The wind was blowing high. Before the train could be brought to a stand the flames had extended to five carts. One cartman, in trying to scale the sides of the truck, was considerably burnt and is not likely to survive.

MR. J. Holt Schooling, in the *Pall Mall Magazine*, calculates that in England and Wales people die at the rate of more than 1,500 per day, or 65 in each hour of the day and night—or more than one per minute. As regards the age at which death occurs, the age-group under five years includes by far the largest number; and, as regards deaths of adults, the age-group 65-74 contains more than any of these other groups. Here are the figures:

Age.		Age.		Age.	
Under 5 years...	37.4	25-34 years...	5.8	75-84 years...	8.5
5-9 " ...	2.9	35-44 " ...	7.0	85 years & upwards	2.1
10-14 " ...	1.6	45-54 " ...	8.1		
15-19 " ...	2.3	55-64 " ...	9.8	Total ...	100.0
20-24 " ...	2.7	65-74 " ...	11.8		

"In a series of diagrams Mr. Schooling shows the respective killing power of ten of the English population's most deadly enemies. The most frequently fatal diseases are: *Diseases of the Respiratory System*, which thrust so deep into our thirty millions, and are largely made up of bronchitis, powerfully aided by pneumonia; *Diseases of the Nervous System*, which have about one-half the killing power of their mighty leader; and *Diseases of the Circulatory System* [nearly all diseases of the heart] and *Phthisis* [commonly called consumption] which are each of them nearly equal in killing power to the group of Nervous diseases just referred to. *Old Age* comes next, and claims every year about 1 per 1,000 of the population. In England and Wales 5 per 1,000 of the population are aged eighty and upwards; so that if we consider these five as aged persons liable to die of old age, we see that at present only one person 'wears out' in every five who should end in this natural and peaceful way.

THE first meeting of the 143rd session of the Society of Arts was presided over by Major-General Sir Owen Tudor Burne, chairman of the council. The opening address was devoted to "India: Its Arts, Manufactures, and Commerce."

"The Chairman alluded at the commencement of his address to the diversified character of the natural features of India, and pointed out that its vast population was as varied in character and thought as the Norwegian and the Italian, while, similarly, the climate had its extremes of heat and cold and of drought and rain. This great empire, he reminded his hearers, was protected by a military force which numbered about 73,000 European and 146,000 native troops, besides 30,000 Volunteers; it was irrigated by nearly 41,000 miles of canals, traversed by nearly 20,000 miles of railways (none of which might be said to have

existed half a century ago), and covered with a network of about 46,000 miles of telegraph line. Speaking of its natural features and products, he said that the mountainous tracts of the Himalayas produced all the plants and species of European grain, fruits, and flowers, and the vegetable produce of the plains of India was the same as in all tropical countries. Dealing with Indian art, he said that the fine arts, which should always follow the useful arts, and which were generally confined to painting, sculpture, engraving, and architecture, did not take a leading place in the present occupations of modern India. It was to architecture that we chiefly looked for the fine arts in India, and this was said to owe its development to Buddhist rather than to Hindu impulses. Nevertheless, Hindu art powerfully asserted itself in the Imperial work of the Moguls, and had left behind memorials which excited the admiration and astonishment of our age. But the great characteristic of all art in India was the obvious absence from it of intellectual power. Speaking of the manufactures of India, he mentioned, after dealing with the native art industries, that there were now 144 cotton mills (containing 34,000 looms and 3,700,000 spindles) in India, of which 100 were in the Bombay Presidency alone. These employed 140,000 hands. There were also 29 jute mills, with 10,000 looms and 200,000 spindles, employing 75,000 hands, and 2,500 rice, paper, tobacco, and other mills and factories, which employed some 300,000 more of the industrial population. Breweries also, of which there were 22 in India, were in a flourishing condition. The commerce of India was of an interesting character and of increasing importance. Before the English became the ruling power in India the country did not possess £1,000,000 a year of staples for exportation. She now sold to the world about £70,000,000 of such staples; and, taking merchandise alone, the average value of India's trade with England was some £22,000,000 sterling, or about one-third of her total exports. She received imports from the mother country amounting to about £28,000,000 annually. The internal trade of India greatly exceeded her foreign commerce."

NOTES & LEADERETTES, OUR OWN NEWS

& THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

PRESIDENT Kruger, in closing the Volksraad, said he desired only to act on the defensive and never aggressively, and to preserve friendly relations with Great Britain in love and peace. In his address to the five thousand Boers at Krugersdorp on the occasion of the anniversary of Dangan Day, there was no trace of any Anglophobe feeling.

OWING to the mediation of the Board of Trade, the threatened Railway strike has been averted. The dismissed brakemen have been reinstated, and the London and North Western Railway Company will consider their grievances. The Hamburg strikers, getting discouraged are resuming work. At a meeting of the delegates of the Dockers and Seamen's Union, it has been decided to declare a general strike in London failing an advance in wages of ten shillings per week.

THERE is strong popular opposition in Venezuela against the agreement arrived at with Great Britain, but the President and Government approve.

THE *Daily News'* Olessa correspondent states that several Russian papers now strongly deprecate the Indian famine fund, and argue that charity begins at home. There are signs that the fund is becoming a fiasco. There is also the report that an ukase has been issued to the Directors of Russian Railways to convey corn collected for India free, and also orders its free storing until shipped in volunteer fleet. The *Times* regrets the impression formed at St. Petersburg that the object of the Russian famine fund for India has not been appreciated by Great Britain, and says that it is regarded as a genuine and spontaneous offering springing from the impulse of the Russian heart, but that caution is necessary in considering the bearing of such offers whether emanating from British or Russian sympathy. It praises the efforts of native charity whereon Government must mainly rely on such occasions, and is not for any foreign aid until all available Indian sources of charity are exhausted.

THE treaty published by the *North-China Daily News* at Shanghai between Russia and China, is denied at St. Petersburg. The railway scheme is confined to the construction of a short Chinese Railway in Manchuria connecting the West Siberian and Vladivostock lines.

THE St. Petersburg *Viedomosti*, in an article on the Armenian question which has been much commented upon, says that Russia will adhere to common European action and exhaust all means of conciliation before a resort to arms, but that if the Powers decide upon an active policy Russia must obtain the sole mission of executing the work of protecting the Christians in Turkey. The *Times* states that any intervention or coercion in the affairs of Turkey must be of an international character, conferring no exclusive advantages upon any one Power. Lord George Hamilton, speaking at Ealing, said that there was strong probability of a satisfactory settlement being shortly reached, which would put a stop to the Turkish misrule. The *Daily News* correspondent at Constantinople says it is understood that the Powers intend to coerce the Sultan in the matter of granting the promised reforms. The *Daily News* publishes a telegram from Vienna which states that, in the event of the Sultan refusing to grant reforms the ambassadors of the Powers will demand their passports.

It is expected that the negotiations between Great Britain and the United States relative to the arbitration treaty will be concluded within three weeks. It is believed that the treaty will be for a term of five years, and will provide for the formation of an arbitration court comprising three judges for each country to settle all differences except the Venezuela and Behring Sea questions, but to include the Alaska boundary dispute.

THE preamble submitting the naval estimates to the Italian Parliament deplores the condition of the Italian navy which, it declares, has fallen below the level of efficiency when compared with the navies of other Powers. It demands seven millions lire as an additional vote for the purpose of building new ships. The French Chamber of Deputies has rejected the proposal to expend two hundred million francs on the navy. Ministers admitted that there were various defects and abuses in the navy, and undertook to introduce remedial measures.

THE *Times'* correspondent at Athens telegraphs that an extensive revolutionary movement is being projected in Macedonia to take place in spring. The leaders propose to create a diversion by fomenting a revolt in Crete. Quantities of munitions have already been sent to Crete.

STUDENT disorders have taken place at Moscow, St. Petersburg and Kieff. Political documents have been seized, and several arrests made.

SAAD-ED-DIN, Governor of Crete, has been recalled in accordance with the wishes of the Powers. Under pressure from Italy and France the Porte has promised an amnesty to the Armenians.

THE Italian Government has formally denied in the Chamber of Deputies that Russia has occupied a strip of coast near Obok.

A SHARP shock of earthquake has taken place throughout the central, southern, and western counties of England and also in the suburbs of London. The shocks were most serious at Hereford, where the Cathedral and Railway station, besides many houses, were damaged.

THE Levée on Thursday night was largely attended. We give an analysis below with that of two previous years. The number of unavoidably absent is increasing and it is, we fear, due to the hour at which the ceremony takes place. Levée is a morning reception and is so in every court except in Calcutta. When will the anomaly cease and the old regular order re-established?

OUR private information from England by the last mail is that Sir W. C. Petheram, our retired Chief Justice, will be put on the Judicial Committee of the Privy Council.

THE increase of plague in Bombay, which Dr. Jelovitz attributes to fall in the temperature, has been the occasion of a fresh notification by the Health Department. It is in these words:

"A disease of a peculiar nature characterised by fever and swelling of the glands, is prevalent in Bombay. This fever is propagated and increased by living in an insanitary way, especially in overcrowded and dark buildings, by taking an insufficiency of proper food and hence lowering the vital power, and by neglecting wounds or abrasions on the surface of the skin. In order to put a stop to this fever, it is necessary that the people should co-operate with the Municipal authorities by reporting at once to the Health Officer or the Ward Medical Officer every case of fever and swelling of the glands. This is necessary in order that the sufferer may be promptly treated and that precautions may be taken to prevent the disease spreading and infecting others. It is observed that the people who are most often attacked are those who live in dirty, overcrowded buildings, insufficiently lighted and ventilated, and who do not eat good food. The Municipal authorities are prepared to clean and disinfect all houses in which this disease has appeared, and people will best help by not putting any obstruction in the way of Municipal officers. Further, all people are warned that the best way of avoiding this fever is to clean and keep clean and admit light to every part of their habitations, keep all doors and windows open, burn all old rags and rubbish that may have accumulated, eat a sufficiency of good food including fruit, and carefully clean and cover all wounds or abrasions of the skin from dirt and the air."

In October last, the municipality made a grant of Rs. 1,00,000 for special sanitary measures. That sum being exhausted, the Standing Committee have made a fresh recommendation for another Rs. 1,50,000. The proposition to engage, if possible, the services of Dr. Yersin for a limited period, fell through, and the Committee decided that the Commissioners be asked to ascertain by telegram on what terms the doctor would come to Bombay and for what period in connection with the enquiries which were being made into the bubonic plague.

The panic due to plague has much increased. "The exodus," it is said, "during the Diwali was great, both by sea and land, but it was nothing compared to the migration from the city during last week to the suburbs and to Gujrat and distant parts of the country." Some of the streets in the affected localities are reported to present a deserted appearance. The number of people who have left are estimated at a hundred thousand. These are mostly of the lower classes, such as artizans, workmen and domestic servants. This exodus is not desirable, for it is said there have been several cases of plague in Cutch among arrivals from Bombay. A Borah lad has died from the same cause at Broach. Other towns in Gujrat have likewise suffered. The attacks so far are confined to the Bombay runaways. If they cannot escape by flight why then imperil the safety of others by going to them?

MR. R. D. Mehta writes to the *Englishman* :—

"Sir,—You will have noticed the enormous rise in the number of fresh cases of bubonic plague at Bombay reported in your columns, as well as in the mortality incidental to the plague. The figures are sufficiently alarming. But they do by no means give the public an accurate idea of the gravity of the situation. They are not exhaustive. I have been on a visit to Bombay recently and I had the opportunity of being present at the meeting of the Municipal Commissioners; and in that meeting I heard one of the Commissioners, who is also an eminent medical man, complain that all the cases of the plague were not reported to the Press, and it was impossible for the public to get accurate information on the point. Thus you will see the information is far from being complete and the figures are low. Add to this the fact that the plague is steadily, albeit slowly, expanding, and is victimising classes of people who are remarkable for the cleanliness of their habits and might consequently be expected to enjoy an immunity from all sorts of filthy diseases. Only a few weeks ago when I was at Bom-

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

being confined among the lower classes of people, people who might be from their dirty habit of living suspected to be predisposed to it. But now Eurasians, Parsis, and Europeans—in fact, the very best men of the place, who habitually take every sanitary precaution, are falling victims to it."

He then asks the question :—

"I am not an alarmist, and do not wish to create any unnecessary alarm. But regard being had to the awfully insanitary conditions of life in Calcutta and the intimate relations between it and Bombay, is it too much to predict that, sooner or later, Calcutta will be visited by the plague?"

We hope our good friend brings no plague with him.

THERE were apprehensions of plague overtaking Bombay in 1833. The precaution taken to save the city was swift and effective. We read in an old journal of the 13th March of that year :—

"The plague in Bombay. There is now no doubt that the *Sophia* which recently came into Bombay from the Persian Gulf had the plague on board, and had carried off a large number of her crew. In the log-book of this vessel, the Captain who has also been carried off by plague, has stated, that in going from the beach at Bushire to a house to the vicinity, he discovered two hundred dead bodies lying in the streets. The reader will easily judge from this fact to what state that unfortunate city must have been reduced by the plague. In order to prevent infection, it has been determined to scuttle and sink the *Sophia* at Bombay; a measure rendered the more necessary as she had on board the clothes of those who had died of the plague."

BOMBAY, in public meeting under the presidency of the Governor, has declared that there is famine in the land, and that it is time when measures must be adopted for inviting subscriptions to alleviate the sufferings caused by the scarcity which prevails in many parts of the Presidency. The Governor-Chairman announced the receipt of subscriptions amounting to Rs. 40,000 and said "do not let any one be abashed because his subscription could only be the modest one of one rupee, eight annas, or even less; in this matter the poor might help the poor. True charity knew no race or caste."

THE *Pioneer* writes :

"But the general drought extended to Orissa and all over the Division the Commissioner reported a little time ago that outside the irrigated area the outturn would be very poor."

There are two canals in the Orissa Division. One from Bhudruck to Cuttuck, a distance of 65 miles; the other from Cuttuck to the river Suburnarekha, the northern boundary of the Division. The latter is called the coast canal, but as its water is saltish, it could not be used for irrigation purposes and crops on both sides of this canal dried up for want of rain. The only benefited area in the Division is that lying on the two sides of the Bhudruck canal.

WE would draw the attention of our readers to the letter of Mr. Skrine, Commissioner of the Chittagong Division, on the cry of prohibition of the export of rice as a famine relief measure. We too had been asked to swell the cry, but we knew that the prohibition was impossible. Lord Northbrook had decided the question during the famine of 1874. Mr. Skrine explains why the step is not necessary now. We are much obliged to him. If other high officials followed the Commissioner of the Chittagong Division, the ruled would better understand their rulers and cease to grumble unnecessarily. In very few but pregnant words, Mr. Skrine points out generally the duties of citizens, their proper aspirations and the way to the desired goal, and in particular those to

The Indian Association for the Cultivation of Science.

210, Bow-Bazar Street, Calcutta.

(Session 1896-97.)

Lecture by Babu Ram Chandra Datta, F.C.S., Monday, the 21st Dec., at 4-15 P.M. Subject: Bismuth, Cadmium and Tin.

Lecture by Babu Ram Chandra Datta, F.C.S., Tuesday the 22nd Dec. at 4-15 P.M. Subject: Arsenic.

Admission Fee, Rs. 4 for Physics, and Rs. 4 for Chemistry; Rs. 6 for both Physics and Chemistry; Rs. 4 for Physiology; Rs. 4 for General Biology; Rs. 6 for complete course of Physiology and Biology. The charge for a single lecture is 4 annas.

MAHENDRA LAL SIRCAR, M.D.,

Honorary Secretary.

Dec. 19, 1896.

be performed at the present moment when there is famine in the land. His words may seem harsh but they are the outcome of a sympathetic heart. And there are few governing officials in the country who truly feel for the people like him and try to elevate their condition.

REIS & RAYYET.

Saturday, December 19, 1896.

THE RIGHT OF AN UNCHASTE WIDOW UNDER THE HINDU LAW.

AMONG the ancient Hindu legislators, there is a deal of conflict as to the capacity of even a chaste widow to inherit the estate of her deceased husband. There is the same conflict in the modern digests. According to Vijnaneshwara, who lived in the 11th century of the Christian era, and whose commentary on the code of Yajnavalkya is accepted as an authority in almost every part of India excepting some of the districts of Bengal, succession to the undivided share of a deceased member of a joint family takes place by survivorship, and not by inheritance; and it is only upon the death of a person who was not a member of a joint family that his estate, in the absence of nearer heirs, can be taken by his widow. Jimutavahana, the author of the digest called the *Dayabhaga*, which is accepted as an authority in most of the Bengali-speaking districts of Bengal, tried hard to upset all the doctrines of the *Mitakshara*, and, among other matters, sought to establish that the chaste widow of a sonless person inherited his estate in all cases, and not merely where the deceased had no one associated with him as a member of a joint family. The *Dayabhaga* was accepted as an authority by the Pandits of Bengal in the 15th century of the Christian era. But the people of the country evinced great reluctance to recognise in practice the heritable capacity of widows, and even long after the acquisition of sovereignty by the English, cases very often came before the courts in which Hindu widows sought to establish their rights as against the undivided coparceners of their deceased husbands. In fact, it is the administration of the Hindu law of the *Dayabhaga* by the English Law Courts of Bengal that has led to the complete recognition of the heritable capacity of Hindu widows in the Province.

According to the plain meaning of the ancient texts favouring the claim of the widow and the commentaries of Jimutavahana, it is only the chaste widow that can inherit and enjoy the estate of her deceased husband. The kind of casuistry by which their sense has been distorted will be found in the judgments in *Srimati Matangini v Jai Kali*, 5, Bengal Law Reports, 466; *Keri Kolitani v Moni Ram Kolita*, 13, Bengal Law Reports, p. 1; *Indian Law Reports*, 5 Calcutta, p. 776. The method of interpretation followed therein may be regarded by the expounders of our laws in these days as unexceptionable. But it has given a far greater shock to Hindu feelings and sentiments than perhaps anything else ever done by our present rulers executively or judicially. Hindu law gives a very inferior status to remarried widows, and, in practice, the remarriage of widows is quite unknown among the higher classes of Hindus, while even among the lowest classes of Bengal it is very rare. Ordinarily, a Hindu widow will live either under the protection of her husband's relatives or under that of her parents,

Rarely a widow brings disgrace on her relatives by eloping with some young man, and afterwards openly living a life of shame in a town. In such cases her kinsmen try their best to ignore their connection with her altogether, and her own sense of shame generally leads her to keep away from her relatives and friends. To avoid having to see her or to be known to be connected with her, the relatives would willingly give her anything excepting a share in the family dwelling house and the ancestral lands. But by recognising the right of an unchaste widow to enjoy the estate of her deceased lord, our courts have made it impossible for her kinsmen to oust her from the family dwelling house or from her husband's share of undivided lands. The disgrace that she might now inflict upon her coparceners by insisting upon the right given to her by our judge-made law, and misconducting herself while living under the same roof with them, can be better imagined than described, and this result is due to a view of our ancient laws for which there is hardly any justification whatever.

The most important of the holy texts cited in the *Dayabhaga* as favouring the right of a chaste widow to succeed to the estate of her deceased husband, are those of *Vrihaspati* and *Vridhdha Manu*. The ordinances of the former are not correctly translated in *Colebrooke's Dayabhaga*, and the following passages containing a more correct version are cited from the Sacred Books :—

"In the revealed texts (of the Vedas), in the traditional law (of the Smritis), and in popular usage, the wife is declared to be half the body (of her husband), equally sharing the outcome of good and evil acts.

Of him whose wife is not dead, half his body survives. How should any one else take the property, while half (his) body lives ?

Although kinsmen (*Sakulyas*), although his father and mother, although uterine brothers be living, the wife of him who dies without leaving male issue shall succeed to his share.

A wife deceased before (her husband) takes away his consecrated fire (*Agnihotra*), but if the husband dies before the wife, she takes his property, if she has been faithful to him. This is an eternal law." Sacred Books of the East, vol. XXXIII, chapter XXV, vs. 46-49, cited in the *Dayabhaga*.

The law on the subject is similarly laid down by *Vridhdha Manu* in the following text cited in the *Dayabhaga* :—

"The widow of a childless man, keeping unsullied her husband's bed, and persevering in religious observances, shall present funeral oblations and obtain his entire share."

On the authority of these and other texts, it is admitted on all hands that it is only the chaste widow who can succeed to the estate of her childless husband. In the cases cited above the question was not as to the right of an unchaste widow, but the effect of unchastity after the death of the husband, and the vesting of the estate in the widow. The shastric law is contained in the following text of the sage *Katyana* :—

"Let the childless widow, preserving unsullied the bed of her lord, and abiding with her venerable protector, enjoy with moderation the property until her death." *Dayabhaga*, chapter XI, I. 56.

With reference to this text, the late Mr. Justice Mitter, in his order of reference in *Keri Kolitani v. Moniram Kolita*, said :—

"This passage shows clearly not only that the widow's right is a mere right of enjoyment, the word 'enjoyment' being understood in the sense explained above, but that the exercise of that right is absolutely dependant on her 'preserving unsullied the bed of her lord.' The participial form of the word 'preserving,' i. e., continually preserving, which is also the form used in the original (*palayanti*) proves conclusively that the injunction is one in the nature of a permanently abiding condition, which the widow is bound at all times, and under all circumstances, to satisfy; and the right of

enjoyment conferred upon her being expressly declared to be subject to such a condition. Every violation of the right must necessarily involve a forfeiture of that right. It has been already shown that the widow's right of succession is dependant solely and exclusively on the authority of special texts, and it would not certainly lie in her mouth to say that she is entitled to enjoy that right without being bound by the conditions which these very texts have imposed upon her. It has been said that the same reasoning would apply with equal force to the other portion of the text which requires her to abide with her venerable protector. But this is not a separate condition by itself. It is, in fact, merely that of preserving unsullied the bed of her lord, and is simply as a means to an end. Indeed, it was at one time a matter of grave doubt whether a widow, who has voluntarily left the protection of her husband's kinsmen, is entitled to retain his estate. The question was ultimately settled in the affirmative by the Privy Council. But the decision in the case of *Cossinaut Bysack v. Hurrosoondery* was expressly put upon the ground that the widow, in that particular case, had not changed her residence for unchaste purposes."

Considering the wording of the text of *Katyana*, these observations appear to be quite unexceptionable. In fact, one of the Judges, who favoured the claim of the unchaste widow, observed that the text at first sight appeared to require chastity as a condition of enjoyment. The main ground of the decision under consideration was that there was no text expressly laying down that unchastity on the part of a widow could make her forfeit the estate inherited. But there are in Hindu jurisprudence, as administered at the present day, a very large number of well accepted propositions for which it would be simply impossible to find any direct authority in any original text or in any digest, and which are founded either on inferences, or on sheer ignorance of our Judges. There was certainly in the text of *Katyana* a very broad basis for the view taken by the dissentient Judges, and, as their view was favoured by the sentiments of the Hindu community, there is very little justification for the decision by which the majority of the Judges overruled them and outraged the feelings of the Hindus as a nation.

As an instance of the other fallacies on which the decision of the majority of the Full Bench in *Keri Kalitani v. Moniram Kolita* was based, the following passage from the judgment of the Chief Justice Couch may be cited :—

"The widow, chaste at her husband's death, takes as 'half her husband's body,' and for performing works efficacious for his soul. The daughter, unmarried at her father's death, takes because she is 'as it were himself' (*Dayabhaga*, chapter XI, S. 2, V. 1), and because she is, equally with the son, 'a cause of perpetuating the race,' and (V. 7) confers benefit on her father by means of her son.' It is clear from V. 30 that the issueless widowed daughter, in whom as a spinster the estate had vested, would retain it until her death, although after her husband's death she would be wholly inefficacious to confer the benefits, for which she had been selected to take." 13 B. L. R. 79.

The part of the reasoning of Mitter J. that is commented upon in the above passage is clearly erroneous. His reading of the *Dayabhaga* had led him in *Guru Gobindo Shaha v. Ananda Lal* to lay down that the law of inheritance as propounded in the *Dayabhaga* was based solely on the principle of spiritual benefit and that heritable right had its origin in every case in the capacity of the heir to confer some benefit on the soul of the deceased. This view is rendered very plausible by a very considerable part of the observations made by the author of the *Dayabhaga* in the different parts of his great work. But in one of the concluding passages of the chapter on collateral succession, *Jimutavahana* has himself admitted that his theory is untenable, and that heritable capacity is founded upon special texts, and not on any principle of reason. This being the true principle of the *Dayabhaga*, it is not correct to say that, according to it, the widow or the daughter

succeeds because of her capacity to confer spiritual benefit, or that, if after inheriting she forfeits the capacity to confer such benefits she loses also the estate. Under the circumstance, the criticism of Couch C. J. touches only the reasoning by which Mitter J. sought to establish his view of the law, but not the point at issue.

If the text of Katyana be sufficient to support the view that the widow incurs forfeiture by unchastity, then it cannot be said that such forfeiture is protected by Act XXI of 1850. The only provisions of Hindu Law that the Act abrogates are those that inflict the penalty of forfeiture

(1) On account of voluntary renunciation of the Hindu religion.

(2) On account of exclusion from the communion of the Hindu religion.

(3) On account of loss of caste.

There is nothing in the Act to support the doctrine that it can save forfeiture brought about by any other cause, as, for instance, unchastity in a widow. The Judges who favoured the claim of the unchaste widow Keri Kolutani, were apparently led to do so not so much by an earnest desire to administer Hindu law according to the Hindu codes of law, as by a mistaken view of public policy. Jackson J., who was one of the majority, said:—

"From unascertained causes, immoveable property is notoriously, in some parts of Bengal, to a very great extent in the hands of Hindu widows whose relation with the families of their deceased husbands are not always amicable; whose personal liberty is now, it may be said, unlimited and whose enjoyment of the estate not merely defers, but often seriously impairs the prospects of reversioners. If therefore it be recognised as a rule of law by this tribunal that a Hindu widow forfeits, by unchastity, the estate which she had taken as the heir of her husband, then I apprehend, not only will a fruitful cause of domestic discord be largely extended, but a motive will be afforded, to say the least of it, for publishing and bringing into court the most deplorable scandals."

This apprehension may appear reasonable enough in a foreigner. But it must appear to be quite unreasonable to every one knowing anything about the stringency of the Indian law as to libels in these days, and the social ignominy caused to every member of a Hindu family by the misconduct of any one connected with it. A Hindu cannot easily change his residence, and whenever there is a scandal in a Hindu family it becomes the usual topic of conversation among his castemen and fellow-villagers. If the misconduct is of a serious nature, the whole family may be put out of caste. In any case, they are made very miserable indeed.

The judgment delivered in the case of Keri Kolutani v. Moniram Koluta by the late Mr. Justice Mitter was not, as shown already, such as can be supported in all points. But it was evidently based upon the opinions of some of the most learned Pandits of the country, and a very considerable part of the reasoning by which it was sought to be established was quite unassailable. The overriding of such a decision by foreign lawyers, unacquainted with our sentiments and ignorant even of the language in which our legal codes are written, is however not the only instance in which the self-sufficiency of our Judges has got the better of their common sense and sense of justice. The appointment of the works of Messrs. Mayne, Macnaghten and Cowell as text books for Hindu boys, are acts which are still less justifiable, and the climax was reached when Dr. Jolly was brought from Germany to teach the descendants of the Rishis the laws given to their nation by their ancestors.

THE PROHIBITION OF THE EXPORT OF RICE.

TO THE EDITOR, *Reis and Rayyet*.

SIR,—I have been inundated with petitions and letters suggesting that Government should forbid the export of rice from this Division: and the general feeling that some such measure should be adopted has found a vent in some places in a most unwarrantable interference with the course of trade by subordinate officials and the police. Your paper circulates widely in Eastern Bengal, and is largely copied by your native contemporaries. I venture, therefore, to ask permission to explain in your columns the reasons which evidently prompt Government to maintain an attitude of vigilant neutrality as between the producer and consumer.

The nineteenth century will go down to posterity as the era of developed communications. Old men can remember the time when India had no railways, steamers, or telegraphs; no roads, except a few trunk lines maintained for military purposes; and no post offices save those which existed for the benefit of official correspondents. Twenty years ago there were not half as many carts in the whole district of Tippera. Now the familiar *bail ghari* may be counted by thousands there.

The result of the amazing improvements introduced in the means of locomotion and intercourse is that the whole empire, nay the entire civilized world, shows a solidarity as regards supply and demand. In Moghal times and, indeed, in the earlier days of the British *raj*, one district might starve while the cultivators of a neighbouring one were groaning under a glut of grain: and as to supplying deficiencies by importations from foreign countries, why, half the population of Bengal might—and indeed did on one occasion—perish before Europe could learn or relieve the wants. In our times the range of prices over tracts of immense area is very small indeed: and India lays the uttermost ends of the earth under contribution. This dead level in market values of food grains is, perhaps, the most salient economic feature of the day. It is due to the fact that the Post Office, Telegraph and Press are speedy to proclaim deficiencies: and roads, railways and steamers enable those who have a surplus stock to come to the rescue.

Thus a universal sympathy has grown up, making the whole world kin and war daily more and more of an anachronism. But there is nothing so sensitive as the complicated and automatic mechanism of commerce which thus annihilates time and space. To interfere rashly with its workings in any detail is to wreak far-reaching and perhaps irreparable mischief. So complete is the consensus of opinion amongst educated men on this point that Governments are constantly endeavouring to narrow the sphere of their action in economics.

In well-ordered States the central power now concerns itself only with the preservation of peace, the conservation of health and with organisations for promoting convenience which are on too vast a scale for private enterprise. There is in India far too little recognition of the great principle of *laissez faire*. The constant clamour for the intervention of an overtasked Government in social and commercial affairs is degrading to those who raise it, and is a standing obstacle to the building up of a national spirit—a consummation which I desire as ardently as any one. "Only by blood and tears are nations saved." I would rather see a people toiling slowly upwards towards their redemption at the cost of many mistakes and much individual suffering than one dragooned and policed into a semblance of civilization.

So much for the general principles which animate a good Government in its dealings with the commercial classes. Now a few words as regards that which should be taken up by the people themselves. I have pointed out the amazing solidarity of modern social life. This implies a sympathy which should be more than skin-deep. If, for instance, rice is in demand for export hence, the fact shows that others need it more than we do: and we should cheerfully give of our surplus to relieve their necessities. This we can do with a light heart where means of communication are well organized. In the Chittagong Division, for instance, the Assam-Bengal Railway and the B. T. S. N. Company are about to quote through rates for rice to any station on the former's line from Lower Burma, which will have a surplus of nearly one and half million tons for export. In February

next, rice may be placed in every part of this Division at prices lower than those now ruling.

There is another weighty consideration, based on the working of the laws of supply and demand—that it is a policy fraught with disaster to depress prices artificially. For instance, suppose rice is selling at Chittagong in December at 9 seers per rupee. Exportation is prohibited. The price falls to 12 seers per rupee. Result, increased consumption, a depletion of stocks with no cash return enabling dealers to replenish them, and probable starvation for the masses in March. There is no greater incentive to economy than dear food.

The only course open to a civilized Government at such times is one of vigilance and preparation for relieving local suffering. All that is possible in these directions is being done: and to ask for more is equally foolish and futile.

I have been on special duty in two famines and could say much from personal knowledge of the culpable extravagance which characterized our dealings in Behar in 1874 and the equally culpable want of foresight shown in Madras two years later. Let us learn by our predecessors' blunders and keep our heads cool.

And the educated and wealthy section of the community have duties not less pressing than those which devolve on Government. The first should inculcate, by precept and example, moderation, economy and sound principles: the second must remember that riches, like power, are a trust for the public good. There is an infinite sphere for true philanthropy in this Division and a greater one in other parts of Bengal which have not its advantages of soil, rainfall and communications. I have, &c.,

F. H. SKRINE.

Chittagong,
15th Dec., 1896.

OUR LONDON LETTER.

November 27.

Great Britain. Mr. Balfour did a good day's work on Thursday the 19th as Chancellor of the University of Edinburgh. Early in the forenoon he opened a bazaar to assist the scheme for providing a new ground for the students' athletic society. Principal Sir William Muir presided over a large attendance of the public.

"Mr. Balfour, after explaining briefly that they had already collected and expended £10,000 on an athletic field, and that they now wished to raise another £2,000 to equip the ground, said that they might ask him why this great effort should be made for what to some might appear little better than a luxury. But he was there to plead, not for a University luxury, but for a University necessity. To hear some people talk, they would almost suppose that athletics were a kind of parasitic growth upon modern educational institutions. He did not take that view, and he never had taken that view. If that were the place or the time, above all, if that were the audience, he thought that he could demonstrate that there were some subjects of academic study of great repute, of historical standing, which would not claim to be equal in educational efficiency to some of the athletic pursuits now so ardently followed both in Scotland and in England. (Cheers.) While patience, sobriety, courage, temper, discipline, subordination, were virtues necessary for the highest excellence either at cricket or football, there was a higher point of need. No doubt a University existed largely to foster that disinterested love of knowledge which was one of the highest of all gifts, and to give that professional training which was an absolute necessity in any modern civilized community. But he did not think the duties of a modern University ended there. A University gave a man all through his life the sense that he belonged to a great community in which he spent his youth, which, indeed, he had left, but to which he still belonged, whose members were not merely the students congregated for the time being within the walls where they were pursuing their intellectual training, but who, though scattered, never lost the sense that they still belonged to the great society which gave them their education. (Cheers.) That feeling was not the least valuable possession which a man carried away with him from a University life. That feeling might be fostered—was fostered, no doubt—by a community of education, by attending the same lectures, by passing the same examinations, but no influence fostered it more surely and more effectually than that feeling of common life which the modern athletic sports, as they had been developed in modern places of learning, gave to all those who took an interest in such matters, whether as performers or as spectators."

He then took a special train to Sheffield which he reached about 5 p.m. Later he was present at the Annual Cutlers' Dinner, and delivered a long non-political speech, vigorous and racy. He chaffed Mr. Mundella on Free Trade, and Sir Howard Vincent (both guests at the feast) on Fair trade. He pointed out there were only

two Powers in Europe that went in for Free Trade, Great Britain and Turkey. He scouted the pessimistic views, so prevalent, as to the future of British commerce, and maintained it could hold its own, not only against Germany, but against the world. The "Times" in a leader had a sly hit at his silly boast of never reading newspapers, and pointed out that many things that now appeared as striking novelties to Mr. Balfour, were months ago within the grasp of those who took the trouble to keep themselves abreast of current events from reading the daily journals.

The Archbishop-designate. Some of your readers will be interested to read the quaint old English in which the "letter recommendatory" to the Chapter of Canterbury is couched:

"The *congé d'élire* sets forth that 'supplication having been humbly made to us on your part, that whereas the aforesaid Church is now void and destitute of the solace of a pastor, we would be graciously pleased to grant you our fundatorial leave and licence to elect another Archbishop and pastor, permission is hereby given, we requiring and commanding you by the faith and allegiance by which you stand bound to us that you elect such a person for your Archbishop and pastor as may be devoted to God and useful and faithful to us and our kingdom.' This document bears the Great Seal of the United Kingdom. The letter recommendatory is a much more interesting and quaintly-worded document—'Victoria Regina, Trusty and well-beloved. We greet you well: Whereas the Archbishopric of Canterbury is at this present void by the death of Dr. Edward White Benson, late Archbishop thereof, we let you weet that for certain considerations us at this present moving, we of our princely disposition and zeal, being desirous to prefer unto the same Archbishopric a person meet thereunto, and considering the virtue, learning, wisdom, gravity, and other good gifts wherewith the Right Rev. Father in God our right trusty and well-beloved counsellor Frederic Temple, Doctor in Divinity, now Bishop of London, is endued, we have been pleased to name and recommend him unto you to be elected and chosen unto the said Archbishopric of Canterbury.' The execution of the writ being accepted, the meeting decided to proceed to the election on Wednesday, the 25th inst., and directed the issue of the customary mandate. In pursuance of this decision, citations have been posted in the stalls occupied by the Dean and other prebendaries, requiring their attendance at the Chapter-house, between 9 and 10 o'clock on November 25, to proceed with the election. The enthronement will probably take place in the first week of January next."

Sir Gerald Fitzgerald. The following refers to Sir G. Fitzgerald who was the pet of Calcutta society in the far back days of Lady Mayo. His career has been a singularly fortunate one. He was a junior clerk in the War Office, when he was selected by the late Sir Charles Trevelyan (then your Chancellor of the Exchequer) as one of the four Government clerks to go out to Calcutta, and assist the Financial Department, in inaugurating the system of book-keeping that held good in the Government offices in London. Without in any way derogating from Sir Gerald's financial ability, I am within the mark when I say he owed much of his advancement to his supremacy in the ball room. He was in those days irreverently called "Frizzle," and a capital story is told of him. He was boasting to a well-known and very popular lady of the Government House set, that during the London season his button-holes cost him £80 a year. The answer was very pert, "Pray then, Mr. Fitzgerald, on what did you live?" seeing his salary as a junior clerk at the War Office was only £80. In course of time, Lord Cromer (who, as the Hon. Evelyn Baring had known Fitzgerald in Calcutta) had him promoted to Cairo. One winter the late Lord Houghton (better known as the *Monckton Milnes* of Carlyle and other literary celebrities) spent at Cairo with his two daughters, one of whom Fitzgerald married. This high connection no doubt paved the way for his removal to London to hold the high and well paid post of Accountant-General of the Navy.

"We learn with regret that Sir Gerald Fitzgerald, K.C.M.G., Accountant-General of the Navy, will retire from the Admiralty at the end of the present month after completing more than 41 years in the public service. His duties during that period have been remarkably varied, since he has worked at the War Office and in India and Egypt, as well as in the Admiralty. He began his career in 1856 as a junior clerk in the War Office, and was sent to India in 1863 to assist in organizing the Finance Department. He held various important posts, receiving on several occasions the thanks of the Indian Government, and in 1876 he went to Egypt to take in hand a similar task there. The system of accounts which he established has been proved thoroughly sound and efficient, and has won high praise from such authorities as Lord Cromer and Sir Alfred Milner. Sir Gerald received the appointment from which he is now retiring in 1885, in which year also he was made a K.C.M.G. During his tenure of the post many important changes have been carried out in the department, the Navy Estimates have been remodelled, and the financial difficulties presented by the Naval Defence Act have been surmounted with entire success."

London County Council. After all Mr. Burns' boasting of this immaculate Council, it has just been discovered that in the "Works Department" (Burns' special pet) there has been a systematic

ing cooking of the accounts. There is no charge of personal dishonesty against any of the officials, but a systematic cooking of the accounts, so as to blind the members and lead to the supposition that all work was being done within the estimates as approved by the Council. The *modus operandi* appears to have been this. One contract has been worked out, let us say at £1,000 under the estimate. Another has shown an overoutlay of £1,000. So the book-keepers transferred the saving on the one contract, to balance the excess on the other. The matter is still under investigation, but last Friday a preliminary discussion took place in which Burns displayed his usual vulgar truculence. The "Times" writes: "Figures are awkward things and cannot be got over by Mr. John Burns' facile vituperation." It accuses him of "using the most obvious fustian." It is high time this redoubled plumber were relegated to private life, to earn his living by the sweat of his brow, and his colossal arm. His latest exploit has been knocking a man down in broad daylight on the embankment, because he said "I know you John Burns, a precious man you are to be a member of Parliament. I could tell a lot about you." I think the honest workingmen of Battersea are getting very sick of him. The substance of all his speeches is vulgar abuse of every man better born and better bred than himself. If he is turned out in favour of another Radical candidate, it will only be paying him back in his own coin. A dirtier trick than the one he played to secure the seat will not be found in electioneering annals. Battersea was represented by a thorough Gladstonian, the late Mr. Vaughan Morgan, whose large works lie in Battersea. There was no ostensible reason for superseding him, only the innate conceit of Burns had to be gratified, and poor Mr. Morgan was sacrificed. The better class of the workingmen of Battersea now see it was a bad day for them when they exchanged a worthy gentleman like Mr. Morgan, for a brazen-faced vulgarian like John Burns.

The above was written before the Council's weekly meeting on Tuesday. Sheltering himself under the protection of "privilege," Burns made one of his foul-mouthed attacks on a fellow Councillor, Mr. Gurden, and grossly libelled the "Globe" newspaper. Under the heading "A Challenge to John Burns," the "Globe" of Wednesday evening has the following:

"In the course of yesterday's debate Mr. John Burns, M.P., saw fit to prefer certain serious charges against those responsible for the conduct of this journal. Having regard to the part which 'The Globe' has played in unveiling the scandalous malpractices in the Works Department, we are not surprised that Mr. Burns, who takes so warm an interest in that Department, should make us the target of his invective. Mr. Burns is a past-master in the arts of the demagogue, and he is not unmindful of the ancient maxim which urges those who have a bad case to 'abuse the plaintiff's attorney.' We do not, as a rule, attach any undue importance to the words of Mr. Burns. 'The fittest answer unto such is silence when they brawl.' At the same time, there are limits even to our forbearance, and when a member of the London County Council sees fit to charge us with assailing the Works Department because we are deprived through its agency of certain mysterious advertisements, we have no hesitation in informing Mr. Burns, in the homely Saxon which he loves, that he is telling a downright lie. There are other statements made by him in reference to this journal to which we give an equally categorical denial. His allegation as to the source of the information which we have published was sufficiently refuted by Mr. Walter Emden. Mr. Burns has chosen to make certain calumnious charges against us under the shelter of his privilege as a member of the London County Council. If he will leave his entrenchments and come out into the open, we guarantee him the opportunity of justifying his statements on a charge of criminal libel. If, on the other hand, he declines to repeat outside the Council the charges which he has publicly and deliberately made within its walls, we brand him as the coward and the liar that he is, and leave him to the contempt of all honest men."

"Pretty well for a member of Parliament to be denounced as a 'coward and a liar!' But Burns is both, and it remains to be seen whether the respectable members of the Society of Amalgamated Engineers will continue to pay this vulgar skunk £150 a year, merely to pose as a 'coward and a liar.' Better far, as I have said, to send him back to the sphere from which he should never have been withdrawn. As an unknown entity, working for his daily bread as an artisan, he would be left to the contempt of all his brother workmen, who must be thoroughly disgusted to have such a man representing their interests in the House of Commons. On the 'lucus a non lucendo' principle, he has hitherto been familiarly known to his pals as 'Honest John,' but the epithet will now convey such a world of contrary meaning that it will either be dropped or used only in the way of bitter irony."

The great drink test. The Radical party deserve commiseration. Not satisfied with their endless differences over Lord Rosebery and Armenia, the drink question has to be added as one full of anxieties for the future. The question has long been simmering, but what has given it a peculiar vitality is the action of Mr. Johnson

Ferguson, the member of Parliament for the Loughborough division. He is a man of independent character, and presided not long ago at a dinner of the local "Licensed Victualliers." His speech on that occasion has been gall and wormwood to the caucus. The "Westminster Gazette," by far the ablest of Gladstonian papers, says "the correspondence that has arisen has an interest far beyond the particular matter at issue, for it raises the entire question of the limits of tolerance in the Liberal party." That notorious temperance faddist and whilom Indian globe-trotter, Mr. Caine comes in for comment. He has issued his shibboleth, and announced *orbi et urbi* that "every Liberal who did not approve of the prohibition clause of the Local Veto Bill must be closed among the beerhouse vote." Writes the "Westminster":

"In all electioneering we really know no more disagreeable spectacle than that of a candidate who habitually drinks the best claret at dinner, denouncing liquor as the cause of all evil to an audience of workingmen who as habitually take beer or strong waters, when both are aware that it is a piece of 'business' for the conciliation of teetotalers. It is the insincerity which lies beneath performances of this kind which is largely responsible for the evil plight into which Temperance legislation has fallen. The excessive lip-service which the extreme Temperance Party have exacted from Liberal politicians has created a wholly wrong conception of public opinion on this matter. It has led to the introduction of a Local Veto Bill, which, it is discovered at the last moment, has no real enthusiasm or conviction behind it, and it has wasted the force which might have been expended upon a more moderate measure."

But the Liberal moderate drinker who dares to speak his mind on this matter has to meet Mr. Caine's charge that he contributes to the 'beer-house vote.' He must put up with that as best he can. Mr. Caine, after all, supplies only another instance of that peculiarity of political colour-vision which we discovered the other day in Mr. Tom Mann. The law of that, if we may repeat it, is that to every being of very pronounced colour in politics all other beings of less pronounced colour seem indistinguishable. To Mr. Mann as a Socialist, there is no distinction between Liberals and Tories; to somebody else as an Anarchist, there is no distinction between Mr. Mana and Liberals; to Mr. Caine as a Local Veto advocate, everyone who does not support that particular method of reform belongs to the Beer-house Party. To Mr. Caine as to Mr. Mann it can only be said that we must each act according to our vision, and that if he will insist that the Temperance reform which falls short of Local Veto is indistinguishable from beer-house legislation, then there will be no Temperance reform at all. The whole question will be irrevocably shunted into that limbo of tabooed questions which neither party will touch because a few extremists insist upon an all-or-nothing policy."

Indian Sanitary Statistics. The report on sanitary measures in India for 1894-95 forms painful reading. Apart from diseases incidental to young recruits suddenly transported from a temperate climate to one subject to the conditions of India (such as cholera and enteric fever) the two great factors in paralysing our European army in India are "contagious disease and ague." These two alone are answerable for 61% of the total sickness in the three Presidencies. Admissions into hospitals were at the enormous rate of 15'8 per 1,000. Looking at the conditions favourable to the growth of ague, the "Times" pointedly remarks "it is difficult to resist the conclusion that large bodies of our troops have not been quartered on the most healthy spots that could be found for them." As to contagious disease, "it is permitted to rage will-nigh unchecked, with grave injury both to the effective strength of the European garrison, and to the permanent health of the majority of those whom it attacks." There is an instructive tabular statement embodied in the report "showing the number of soldiers who on 15th July 1894 had suffered, at one time or other, from some form of the disease." It would appear that on that day out of 70,642 British soldiers present in India not fewer than 44,395 had contracted the disease in one form or another. The figures are truly appalling. It is to be hoped the present Government will insist on India being differently treated from England and Scotland. Here let the fanatics, the Butters and Stansfields, the Steads and Stuarts, have their full fling, but forbid their intermeddling with the Indian Government, and let us have no more female spies, with their ferret eyes and unsavoury predilections, acting the part of detectives. I have always strongly felt that our poor soldiers, when dragooned to celibacy, have a right to demand of the fanatics that they at least will set an honest example. But what are the facts? The principal offender, Sir James Stansfield, has been twice married. Stead and Stuart are both married men. I can understand a pure-minded celibate like the late Cardinal Newman making the appeal to our soldiers with some effect, but what of our Archbishops and Bishops, all married men, while the venerable Bishop of Liverpool, Dr. Ryle, so well known for his unctuous tracts, has been privileged to have three wives. The late Bishop Terrot of Edinburgh beat him however, for he had four! No doubt when the House of Commons legislates on this matter leaving the Government of India a free hand, the

fanatics and the nonconformists will start an agitation, under the guidance of Stansfield and Stuart. As they are both violent Gladstonians, they may win a few votes at the new general election, but the intelligent workingman of London will have none of it. The Hughes and Cliffords, the Rogers and Hortons may scream and roar to their hearts' content, but the sound sense of the working classes will keep them on the side of their poor comrades, who in a most trying climate are ever ready to shed their blood in defence of their country's honour.

An obituary notice in the overland "Englishman" of the 4th instant reminded me of old days, when there subsisted between the British merchants and their employees, a bond of mutual respect and sympathy. I refer to the death of Babu Kristo Chunder Dhur on the 28th October "for 20 years the faithful and much esteemed cashier of Messrs. Frinlay and Co."

The United States, Spain, and Cuba. There is a growing feeling of uneasiness in the United States as to the intentions of Spain. There is a noisy jingo party in the States eager to help the Cuban revolutionaries, and nothing would please them better than were Spain to declare war against the Government at Washington. But so far there is no tangible evidence of such an intention on the part of Spain. No doubt were President Cleveland to recognize the rebels, Spain would not hesitate for a moment. But, as President Cleveland resigns office in March, it is very unlikely he will stir the embers of such a conflict. Nevertheless, his hand may be forced when Congress meets next month. The "Times" points out that there are difficulties in the way of the United States hardly less critical than those with which Spain is now confronted. It would appear there is a black population in Cuba of some 7,00,000 "just about the very worst possible sort of population to govern upon Anglo-Saxon principles. The Cuban population has been thoroughly demoralized by a long spell of what can only be described as anarchy. It has found rebellion much more interesting than work. There is no burning desire to increase the Negro element in the Federation. On the other hand were Cuba treated as a territory it is extremely probable that the difficulties which now perplex and baffle Spain would survive to tax the far smaller military resources of the United States."

Germany. The draft Budget for 1897-98 was laid before the Imperial Diet yesterday. It has roused the wrath of the Radicals, as all the profits accruing from posts, telegraphs and railways are absorbed by the expenditure on the army, navy, and military pensions. And after all it shows a deficit of 57,000,000 marks which will have to be met by the issue of a loan to that amount. The Imperial debt of Germany now represents two milliard marks. The total military estimates amount to 486,460,645 marks.

The separate Prussian Budget shows a large credit balance, which is to be devoted to increasing the pay of the judges, as also of the clerks in the Government offices.

The debate in the Imperial Diet on the question of duelling appears to have been of great interest. By far the ablest speech seems to have come from Herr Lenzmann, a member of the Extreme Radical party. Appealing to documents which he produced, he proved the new War Minister (General von Gossler) was entirely in the wrong, when, in his speech the previous day, he endeavoured to make out that the character of Lieutenant von Brusevitz had been comparatively faultless. He proved the Lieutenant had killed the workman Siepmann deliberately, and exclaimed amid the ringing cheers of the Radicals, and some of the Centre party, "such an act is not open to so moderate a construction as manslaughter, it is murder". Nevertheless, the Lieutenant gets off with only six years' imprisonment.

BOOKS.

A most interesting volume of the late Lord Blackford's (formerly Sir Fred. Rogers, permanent Under Secretary of State for the Colonies) letters has been published. He was a first class Oxford man and subsequently Fellow of Oriel. His intimate friends were the late Cardinal Newman, the late Dean Church and Mr. Gladstone. One only regrets so few letters have been given to the public. A second volume would be welcome. He was a remarkable man and one of the finest specimens of our permanent civil servants.

"Professor Nichol's Life," by Professor Knight of St. Andrews, is a book well worth reading. He enjoyed through life the affectionate intimacy of Dr. Jowett, many of whose letters are given.

"The Abbe de Lamennais and the Liberal Catholic Movement in France," by the Hon. W. Gibson, is a good book. The Abbe was a "man of extraordinary genius, whose life by reason of his genius, was one long tragedy." His celebrated work "*Paroles d'un Croizant*" was a strange medley of "Anarchism and ideal Catholicism" wittily described by Rogers-Collard as "'93 going to its Easter communion." Another epigram on it was "the Cross surmounted by the Red Cap." Mr. Gibson's work throws side-lights on Lamennais' two celebrated colleagues Lacordaire and Montalembert.

"A Cycle of Cathay," by an American Missionary to China, Dr. Martin, appears to be a book of the deepest interest to all who follow the wonderful upheaval going on in China.

"It is perhaps the most valuable contribution that has been made to our knowledge of China in recent years. The length of a Chinese cycle is, roughly speaking, about 60 years, and it is with the last 60 years of the history of China that Dr. Martin deals."

Dr. Martin's great gifts as a linguist soon enabled him to conquer the Chinese language, and so exceptional were his acquirements that Mr. Reed, the United States Minister, employed him in conducting the negotiations that led to the opening of Peking to foreigners. Dr. Martin writes "Truth is not a point of honour with the Chinese and adroit lying is, with them, admitted to be one of the prime qualifications of a mandarin." It is a book full of instruction and should be read by all who take an intelligent interest in the future of the Chinese Empire. Here, I may say, we are puzzled to know the truth about our late visitor Li Hung Chang. The latest report is that he has determined to retire into private life, because of the unworthy treatment to which he has been subjected, since his return, by the court party.

"A New History of Philosophy," by Professor Weber of Strassburg demands a passing notice. It is said to "exhibit the best features of French and German scholarship," and gives a clearer exposition of Hegel than any of his predecessors. The one fault appears to be the undue space he devotes to Spinoza, Kant, and Schopenhauer, while others about whom we would wish to be better informed are hurriedly passed over, such as Lotze, Wundt, Steinthal, Fiske, James and Bain. As the "Times" truly remarks students wish to have a history of speculation during the last half of this century. A true friend of India, Professor Duesen of Kiel, one of the greatest Sanskritists of the day and author of the "*Elements of Metaphysics*" might undertake the task. It could not be entrusted to abler or more worthy hands.

LOOKING FROM THE LONELY ROCK.

THE island of St. Paul is merely a great rock in the Southern Ocean. It is the top of a volcanic mountain. There are no means of sustaining life to be found on it. The nearest inhabited land is Australia or Africa. To that ugly and desolate refuge came a boat containing nine persons—two of them women. They had food—on short allowance, for perhaps a week. In less than three days they were half insane from anxiety. Water, water, water everywhere, but no help. On the fifth day, at dawn, a brig hove to off the island. They saw her. Shouting, praying, weeping, they stumbled to the beach, and were rescued. It was one chance in a hundred. I'll tell you *why* some other time.

But, alas! isn't it as bad or even worse on land? Look at the physical wrecks in homes, in hospitals, and answer me. One perishes of privation from shipwreck. A *thousand* perish of privation in the midst of plenty. It isn't food they long for, but *power to use it*—worst and deadliest of all wants.

"My food seemed to give me no strength," says one of this army of unfortunates, "and as the hopeless, starving days passed slowly by I grew weaker and weaker. By-and-by my legs trembled and bent under me, and I could no longer get about."

"The ailment which reduced me to this fearful condition began in the spring of 1892. At first I hardly recognised it for what we commonly call a disease. I felt tired, heavy, and languid, as one often does on the approach of warm weather. I fancied it would pass away, but it did not. I lost my appetite, and only ate from habit and to keep me going. I had no pleasure in it, and no warmth or glow followed it, as happens always when one is well. No matter how light and simple the repast was, or how careful I had been to select things that would not be apt to hurt me, the result was the same. No sooner had I swallowed it than my stomach was distressed, and my chest and sides full of pain. If you will allow me so to put it, *my food appeared to strike back at me*, as though I had no right to use it."

"There was a nasty bitter flavour in my mouth, more or less headache, and a kind of nervousness, which was new in my experience, as it was depressing and cheerless."

"Home remedies failing to help me, I consulted a doctor, but his prescriptions benefited me no more than our domestic medicines had done. My flesh and strength grew less, and I felt like one who has missed his way and looks in vain for a guide to point the road home."

"Finally I commenced attending the Leamington Hospital, and continued to do so for twelve months, but the treatment they gave me had no better effect than all the rest. You can hardly understand how weary I got of taking drugs. I turned almost with loathing from every new dose—not because of the taste, but because they deceived my hopes; they were of no use to me."

"In this state I was, when in March, 1894, a friend urged me to try Mother Seigel's Syrup. On account of the very reasons I have mentioned, I hated to experiment with any more medicines. But I overcame this aversion (most fortunately for me) and got a bottle of Mother Seigel's Syrup from Mr. Judd, the chemist, in Leamington, and after taking it I felt a marked and great improvement. I had no pain after eating and my food felt right, digested, and gave me strength. And as I grew stronger my nerves ceased to trouble me. I can only say that by the continued use of the Syrup I got better daily and was soon as vigorous and well as ever. I have had no relapse, and have every reason to think my cure a permanent one. You are welcome to publish my letter. (Signed) (Miss) Lucy Eden, Tachbrook, near Leamington, September 26th, 1895."

We hope Miss Eden's recovery may indeed prove permanent, and if it does she will find no words too strong when she speaks of the remedy which wrought it. But oh, the vast multitude who still stand, like the shipwrecked people on the island, looking for rescue!—victims of that most obdurate, common and baneful of diseases, chronic dyspepsia. It is for their sakes Miss Eden kindly writes her statement, and for their sakes we print it. May it reach many of them!

Sir George Chesney Memorial Committee.

CHAIRMAN:

General Sir Henry W. Norman.

MEMBERS:

The Marquess of Lansdowne, Field Marshal Lord Roberts, Mr. George Allen, Colonel Sir J. Ardagh, Sir Stewart Bayley, Mr. William Blackwood, Sir Edward Braddon, Rev. A. G. Butler, Colonel Sir G. S. Clarke, General Sir E. Colten, Sir Auckland Colvin, Sir Julian Danvers, General C. H. Dickens, Sir Mortimer Durand, General Sir W. Stirling Hamilton, Captain Hext, R. N., Mr. A. P. Howell, Sir W. W. Hunter, Lieut.-Genl. McLeod Innes, General Sir Allen Johnson, Sir H. S. King, M. P., Mr. A. Lowence, General Sir R. Low, Sir Alfred Lyall, General Sir O. Newmarch, Sir Andrew Scoble, Field Marshal Sir Lintorn Simmons, Field Marshal Sir Donald Stewart, General R. Strachey, General Sir A. Taylor, Mr. Meredith Townsend, Mr. W. C. Unwin, General Sir George White and General Sir E. Williams.

Memorial

TO THE LATE

SIR GEORGE CHESNEY, K.C.B., R.E., M.P.

A Meeting was held, on the 24th April, at the Royal United Service Institution, of some of the friends of the late Sir George Chesney, to consider the question of the commemoration of his distinguished services as Soldier, Administrator, Statesman, and Author. General Sir Henry Norman presided, and was supported by Field Marshals Sir Lintorn Simmons and Sir Donald Stewart, and other friends of Sir George Chesney. To carry out the object of the Meeting, a General Committee was formed, which included the gentlemen then present, and in addition, the Marquess of Lansdowne, Field Marshal Lord Roberts, General Sir George White, Sir Andrew Scoble, Sir Alfred Lyall, Sir H. S. King, Sir W. W. Hunter, Mr. Meredith Townsend, General Richard Strachey, Mr. William Blackwood, and others.

The form the Memorial should take was left for the future consideration of the Committee, as it would depend on the amount subscribed, but the suggestions tended towards a bust of Sir George for the India Office, and a medal for valuable contributions to Military Literature. It was resolved to limit each subscription to a maximum of three guineas.

Subscriptions will be received by Lieutenant-General McLeod Innes, 9, Lexham Gardens, Cromwell Road, London, W.

COMMITTEE FOR INDIA:

His Excy. General Sir George White, V.C., G.C.I.E., K.C.B., the Hon'ble Major-General Sir E. Colten, K.C.I.E., Lieutenant-General Sir W. S. A. Lockhart, K.C.B., K.C.S.I., His Excy. Lieutenant-General Sir C. Mansfield Clarke, K.C.B., Major-General J. Duncan, Major-General G. E. L. S. Sanford, C.B., C.S.I., Major-General G. de C. Morton, C.B., Major-General A. R. Badcock, C.B., C.S.I., Brigadier-General W. G. Nicholson, C.B., Captain J. Hext, C.I.E., R.N., Colonel W. S. S. Bisset, C.I.E., R.E., Colonel T. Deane.

Honorary Secretary:

Colonel T. Deane, Simla.

Subscriptions will be received, in India, by Messrs. King, King & Co., Bombay; Messrs. King, Hamilton & Co., Calcutta; and by the Alliance Bank, Simla, and its branches at Calcutta, Cawnpore, Agra, Ajmere, Darjeeling, Lahore, Murree, Mussoorie, Rawal Pindi and Umballa. Subscriptions are limited to a maximum of Rs. 32 in India.

By order of the Committee,
T. Deane, Col.,
Hony. Secy.

Simla, 18th July, 1896.

"LINSEED COMPOUND," a demulcent expectorant for Coughs, Colds, and Chest Complaints.

LINUM CATHARTICUM PILLS, digestive, corrective, and agreeably aperient.

KAY'S CUE CEMENT.—Tips Billiard Cues firmly. "Your Cement is the best I have ever used."—JOHN ROBERTS (Champion), 1866.

KLINX.—New white inorganic Cement, almost hydraulic, for Pottery, Porcelain, &c.

COAGULINE.—Transparent Cement, for all broken articles. Manufactory, Stockport, England.

CHESHIRE BIRD LIME.—For Mosquitoes and noxious insects. In tin boxes. To spread on paper, twigs, twine. KAY BROTHERS, LTD., Stockport, England.

Don't Be Blind.

Don't refuse to believe in a thing, all you've tried it. Thousands of people suffer the indescribable tortures of RHEUMATISM because they have never heard of

Little's Oriental Balm

For because they are blind to their own interest and refuse to try it. It is a most marvellous pain killer and relieves rheumatic aches almost instantly. It soothes the nerves, delays inflammation of the flesh and quickly penetrates to the bones themselves. There is no reason why any one should suffer with rheumatism if they have Little's Oriental Balm.

GEORGE BELL & SONS,

LONDON AND BOMBAY,

And all Booksellers.

The Rev. Dr. Abbot, formerly Fellow of St. John's College, Cambridge, late Head Master of the City of London School, says:

"I have examined it from the point of view of a schoolmaster accustomed to teach English literature, and not unfamiliar with the needs of learners; and I have been, on the whole, agreeably surprised to find how far a work intended principally for the general readers meets the difficulties that present themselves in the study of those great English classics which are read, or should be read, in our public schools. . . . Taken altogether, the International Dictionary appears to me, considering its manifest value, almost as cheap as it is valuable. It should be possessed by every school library and by every English boy who, after leaving school, finds himself in the fortunate position of being able to buy it."

Prof. J. W. Hales, Professor of English Literature of King's College, London, says:

"I feel quite certain that any student of our language and literature, or any general reader, will search in vain for any one-volume English Dictionary to be compared in value with the new edition of Webster. . . . Undoubtedly the praise given to the edition of 1864, of being 'certainly the best practical (English) Dictionary extant,' is not less due to this new issue of 1890. Immense pains have been taken to bring it to date. Some of the most distinguished living scholars have lent their services, and the result is that, as a whole, in respect of comprehensiveness, in etymological value, in definitional fulness and accuracy, it takes the foremost place amongst works of the same character."

The Chief Inspector of Schools, Sidney, N. S. W., said:

"Its completeness and its accuracy render it, in my opinion, the best existing Dictionary."

AN INDIAN JOURNALIST :

Life, Letters and Correspondence

OF

Dr. SAMBHU C MOOKERJEE,

late Editor of "Reis and Rayyet."

BY

F. H. SKRINE, I.C.S.,

(Collector of Customs, Calcutta, now Offg.
Commissioner, Chittagong Division.)

The Volume, uniform with Mookerjee's
Travels and Voyages in Bengal, consists of
more than 500 pages and contains

PORTRAIT OF THE DOCTOR.

DEDICATION (To Sir W. W. Hunter.)

HIS LIFE STORY.

CORRESPONDENCE OF DR. S. C. MOOKERJEE

Orders to be made to the Business Manag-
er, "An Indian Journalist," at the Bee
Press, 1, Uckoor Dutt's Lane, Wellington
Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of
a remarkable man.—Mr. H. Babington Smith,
Private Secretary to the Viceroy, 5th October
1895.

Dr. Mookerjee was a famous letter-writer,
and there is a breezy freshness and originality
about his correspondence which make it
very interesting reading.—Sir Alfred W. Corft,
K.C.I.E., Director of Public Instruction, Bengal,
26th September, 1895.

It is not that amid the pressure of harassing
official duties an English Civilian can find
either time or opportunity to pay so graceful
a tribute to the memory of a native personality
as F. H. Skrine has done in his biography of
the late Dr. Sambhu Chunder Mookerjee, the
well-known Bengal journalist (Calcutta :
Thacker, Spink and Co.); nor are there many
who are more worthy of being thus honoured
than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr.
Skrine that the story of Mookerjee's life, with
all its lights and shadows, is pregnant with
lessons for those who desire to know the real
India.

No weekly paper, Mr. Skrine tells us, not
even the *Hindu Patriot*, in its palmiest days
under Kristodis Pal, enjoyed a degree of in-
fluence in any way approaching that which was
soon attained by *Reis and Rayyet*.

A man of large heart and great quali-
ties, his death from pneumonia in the early
spring in the last year was a distinct and
heavy loss to Indian journalism, and it was
an admirable idea on Mr. Skrine's part to put
his Life and Letters upon record.—*The Times*
of India, (Bombay) September 30, 1895.

SPECIFICS

for all ordinary diseases, like Fever, Cough, As-
thma, Phthisis, Diabetes, &c., including dis-
eases brought on by irregularities of kinds.
Catalogues, containing full accounts of diseas-
es and remedies, are transmitted on applica-
tion. Prescriptions, with or without medicines,
sent to every part of India and Ceylon,
Cape Colony, and the British Isles, on receipt
(by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from
every quarter.

CATARRH,**Hay Fever, Catarrhal Deafness.**

A NEW HOME TREATMENT.

Sufferers are not generally aware that these
diseases are contagious, or that they are
due to the presence of living parasites in the
lining membrane of the nose and eustachian
tubes. Microscopic research, however, has
proved this to be a fact, and the result is that
a simple remedy has been formulated whereby
these distressing diseases are rapidly and per-
manently cured by a few simple applications
made at home by the patient once in two
weeks. A pamphlet explaining this new treat-
ment is sent on receipt of 2½d stamp by A
HUTTON DIXON, 43 & 45 East Bloor St.
TORONTO, Canada.

WEEKLY NEWSPAPER

AND
REVIEW OF POLITICS LITERATURE AND SOCIETY

VOL. XV.

CALCUTTA, SATURDAY, DECEMBER 26, 1896.

WHOLE NO. 755.

NEW YEAR'S EVE.

A TRANSLATION, OR RATHER ADAPTATION, FROM A SWEDISH TALE
BY ANDERSEN.

LITTLE Gretchen, little Gretchen,
Wanders up and down the street ;
The snow is on her yellow hair,
The frost is at her feet.

The rows of long dark houses
Without look cold and damp,
By the struggling of the moonbeam,
By the flicker of the lamp.

The clouds ride fast as horses,
The wind is from the north,
But no one cares for Gretchen,
And no one looketh forth.

Within those dark, damp houses
Are merry faces bright,
And happy hearts are watching out
The old year's latest night.

The board is spread with plenty,
Where the smiling kindred meet,
But the frost is on the pavement,
And the beggars in the street.

With the little box of matches
She could not sell all day,
And the thin, thin tattered mantle,
The wind blows every way,

She clingeth to the railing,
She shivers in the gloom—
There are parents sitting snugly
By firelight in the room ;

And groups of busy children
Withdrawing just the tips
Of rosy fingers pressed in vain
Against their burning lips,

With grave and earnest faces
Are whispering each other
Of presents for the new year, made
For father or for mother.

But no one talks to Gretchen,
And no one hears her speak ;
No breath of little whisperers
Comes warmly to her cheek ;

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 19 SOUTHAMPTON BUILDINGS, HOLBORN, LONDON.

No little arms are round her ;
Ah me ! that there should be,
With so much happiness on earth,
So much of misery.

Sure they of many blessings
Should scatter blessings round,
As laden boughs in autumn fling
Their ripe fruits to the ground.

And the best love man can offer
To the God of love, be sure,
Is kindness to his little ones,
And bounty to his poor.

Little Gretchen, little Gretchen
Goes coldly on her way ;
There's no one looketh out at her,
There's no one bids her stay.

Her home is cold and desolate,
No smile, no food, no fire,
But children clamorous for bread,
And an impatient sire.

So she sits down in an angle,
Where two great houses meet,
And she curlerh up beneath her,
For warmth, her little feet.

And she looketh on the cold wall,
And on the colder sky,
And wonders if the little stars
Are bright fires up on high.

She heard a clock strike slowly,
Up in a far church tower,
With such a sad and solemn tone,
Telling the midnight hour.

Then all the bells together
Their merry music poured ;
They were ringing in the feast,
The circumcision of the Lord.

And she thought as she sat lonely,
And listened to the chime,
Of wondrous things that she had loved
To hear in the olden time.

And she remembered her of tales
Her mother used to tell,
And of the cradle songs she sang
When summer's twilight fell,

Of good men and of angels,
And of the Holy Child,

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

Who was cradled in a manger,
When winter was most wild ;

Who was poor, and cold, and hungry,
And desolate and lone ;
And she thought the song had told
He was ever with his own.

And all the poor and hungry,
And forsaken ones, are his ;
" How good of him to look on me,
In such a place as this ! "

Colder it grows and colder,
But she does not feel it now,
For the pressure at her heart,
And the weight upon her brow.

But she struck one little match
On the wall so cold and bare,
That she might look around her,
And see if He were there.

The single match has kindled,
And, by the light it threw,
It seemed to little Gretchen
The wall was rent in two.

And she could see the room within,
The room all warm and bright,
With the fire-glow red and dusky,
And the tapers all alight.

And there were kindred gathered
Round the table richly spread,
With heaps of goodly viands,
Red wine, and pleasant bread.

She could smell the fragrant savour,
She could hear what they did say,
Then all was darkness once again,
The match had burned away.

She struck another hastily,
And now she seemed to see,
Within the same warm chamber,
A glorious Christmas tree.

The branches were all laden
With such things as children prize,
Bright gift for boy and maiden,
She saw them with her eyes.

And she almost seemed to touch them,
And to join the welcome shout ;
When darkness fell around her,
For the little match was out.

Another, yet another, she
Has tried, they will not light,
Till all her little store she took,
And struck with all her might.

And the whole miserable place
Was lighted with the glare,
And lo, there hung a little child
Before her in the air.

There were blood-drops on his forehead,
And a spear-wound in his side,
And cruel nail-prints in his feet,
And in his hands spread wide.

And he looked upon her gently,
And she felt that he had known
Pain, hunger, cold, and sorrow,
Ay, equal to her own.

And he pointed to the laden board,
And to the Christmas tree,
Then up to the cold sky, and said,
" Will Gretchen come with me ? "

The poor child felt her pulses fail,
She felt her eyeballs swim,
And a ringing sound was in her ears,
Like her dead mother's hymn.

And she folded both her thin white hands,
And turned from that bright board,
And from the golden gifts, and said,
" With thee, with thee, O Lord. "

The chilly winter morning
Breaks up in the dull skies,
On the city wrapt in vapour,
On the spot where Gretchen lies.

The night was wild and stormy,
The morn is cold and gray,
And good church bells are ringing,
Christ's circumcision day.

And holy men were praying
In many a holy place ;
And little children's angels
Sing songs before his face.

In her scant and tattered garment,
With her back against the wall ;
She sitteth cold and rigid,
She answers not their call.

They have lifted her up fearfully,
They shuddered as they said,
" It was a bitter, bitter night,
The child is frozen dead. "

The angels sang their greeting,
For one more redeemed from sin ;
Men said, " It was a bitter night,
Would no one let her in ? "

And they shuddered as they spoke of her,
And sighed : they could not see,
How much of happiness there was,
With so much misery.

WEEKLYANA.

WE cannot make a better Christmas present to our readers than the piece of poetry with which we open this number. Old readers of this journal are familiar with it, and may like to renew their acquaintance. It is good reading and an instructive story. In the present season of joy and want from scarcity throughout the Indian world and an unusually cold weather, the sufferings of little Gretchen ought to open the purse-strings of the rich. For,

Sure they of many blessings
Should scatter blessings round,
As laden boughs in autumn fling
Their ripe fruits to the ground.

And the best love man can offer
To the God of love, be sure,
Is kindness to his little ones,
And bounty to the poor.

There is no enjoyment like true charity. It, like mercy, is twice bless'd. It blesseth him that gives, and him that takes.

WE are glad, therefore, to read in the *Calcutta Gazette* of this week, that the following subscriptions have been made and works undertaken in the district of Pabna, in the Rajshahi Division :

I.—Rai Bonomali Roy Bahadur, Rs. 1,000 to the Lady Dufferin Fund, and Rs. 4,000 for the excavation of four tanks in Ulupara and

Aganjan thanas. Rupees 1,000 have already been sent to the Lady Differin Fund, and sites have been fixed for the excavation of the tanks.

II.—Babu Sarat Chandra Chowdhuri, of Parsadanga, Rs. 15,000, for a tank in Pabna bazar. Rupees 5,000 have already been deposited for land acquisition proceedings, which are in hand.

III.—Srimati Krishna Kumari Chowdhurani, of Taras, Rs. 6,000, for founding a scholarship.

IV.—Srimati Sasi Mukhi Chowdhurani, of Poyda, Rs. 4,000, for the re-excavation of a large tank at Poyda. This work will soon be commenced.

V.—Chowdhuri Fasi Uddin and brothers, of Pabna, Rs. 2,000, for the construction of a Muhammadan boarding-house in connection with the Pabna zilla school. This sum has already been deposited.

VI.—Raphikonessa and Fakarennessa Chowdhuranis, of Pabna, Rs. 2,000, for a new tank in north-west of Pabna town. Land acquisition proceedings are in progress for this.

VII.—Babu Tarak Nath Pramanik, Rs. 2,000, for the re-excavation of a large tank in the Pabna bazar, known as Amir Khan's tank.

VIII.—Babu Hara Sundar Mazumdar, of Pengua, Rs. 2,000, for excavation of a tank at Pengua. Land acquisition proceedings have commenced.

IX.—Babu Jogesh Prasanna Bhaduri, of Porjana, Rs. 1,000, for the excavation of a tank and the opening of a dispensary at Porjana. The site of the tank has been fixed.

X.—Babu Durga Sundar Roy, of Haturia, Rs. 1,500, for the excavation of a tank in his village.

XI.—Babu Robindra Nath Tagore, of Shazadpur, Rs. 1,000, for the excavation of masonry wells in his zamindari.

XII.—Babu Sri Gobinda Chowdhuri, Rs. 1,000, for completion of a Natmandir of the Pabna Kalibari, and Rs. 300 to the Public Library.

XIII.—Babu Bhobani Charan Chowdhuri, of Haripur, Rs. 1,000 for the re-excavation of a tank.

XIV.—A. Chowdhuri, Esq., of Haripur, Rs. 800, for a Sanskrit toll-house.

XV.—Babu Durga Kanta Chakrabarti, of Saidabad, Rs. 500, for the re-excavation of a tank in his village.

XVI.—Babu Juanoda Gobinda Chowdhuri, Rs. 200, to the Public Library.

XVII.—Babu Bijoy Chandra Banerjee, of Shazadpur, Rs. 500, for masonry wells.

NOTICE has been published under sec. 6 of Act V (B.C.) of 1864 that the concessions in respect of tollage granted to Steamer Companies for their transport services on the canals in Bengal are to be abolished from the 1st April 1898.

MR. E. V. Westmacott, Commissioner, Presidency Division, notifies for general information that "I appoint Nilu Biswas, son of Nardi Mondal, of Ghoneswampore, in thana Shamsheergunge, to be a member of the Dhulyan Union Committee, in the Jangipur sub-division of the district of Murshidabad." Mr. Westmacott takes particular care about the identification of his nominee. What strikes us is how does the son of a Mondal become a Biswas? Either the father is not properly described or the son is given a higher social status by the appointment.

NOTES & LEADERETTES, OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

NOTWITHSTANDING the opposition of Mr. Olney, Secretary of State, the Committee of the Senate on Foreign Relations has adopted a joint resolution requiring President Cleveland to recognize the autonomy of Cuba. The adoption has caused a semi-panic on the New York Bourse. Mr. Olney has announced that the resolution does not affect the policy of the Government. He denies the power of Congress to recognise the autonomy of Cuba. This foreshadows a grave dispute between the Legislature and the Executive if the Congress persists. Governors of several American States declare that they are ready to raise volunteers to fight Spain if necessary. President Cleveland approves of the position taken up by Mr. Olney. Senor Jose Maria Beranger, Spanish Minister of Marine, has been ordered to hasten the completion of the warships now building. Don Antonio Canovas Del Castillo, the Spanish Prime Minister, in an interview with Reuter's representative, said he relied on the statesmanship of President Cleveland and Secretary Olney and the good sense of the more sober Americans to prevent a war between the two countries, but Spain was determined to uphold her dignity, and was making preparation against all eventualities. Senor Canovas states that Spain would rather succumb than grant Cuba her inde-

pendence, but is sincerely disposed to grant a satisfactory autonomous administration providing the rebels submit.

GENERAL Kitchener has arrived at Dongola. Part of the Kordofan army has arrived at Omdurman, where many camels have been collected, it is believed, for the purpose of raiding cattle. The telegraph between Suakin and Tokar has been cut. It is believed that the Khalifa will continue to act on the defensive, except in the matter of raiding.

REUTER'S correspondent at St. Petersburg says that the question of the passage of the Dardanelles will only be raised in the event of the Turkish crisis compelling the Powers to resort to coercive measures. M. Nehdoff will submit to the other Ambassadors at the Porte certain proposals comprising those made in Lord Salisbury's programme recently submitted to the Powers. The *Times'* Constantinople correspondent states that before considering their plan of action the Ambassadors there will collect information which will probably occupy several weeks. Lord Salisbury has not prepared any project regarding the Turkish reforms, but has simply proposed to the Ambassadors of the Powers at Constantinople to draft a report dealing with the situation, and to submit the same to the Powers. This proposal has been accepted, and is now being done. Reuter's special correspondent at Constantinople states that the Ambassadors of the Powers are empowered to concert fresh proposals to ameliorate the Turkish situation, and will refer the same to their Governments before submitting them to the Sultan. All the Powers including Russia are agreed in principle as to the necessity for coercive measures if the Sultan is unyielding. The Sultan has issued an irade granting an amnesty to the Armenian prisoners except those condemned to death for murder, and they will be imprisoned in provincial fortresses.

THE cargo of the German steamer loading at New York, with maize for India, under Government orders, is intended both for food and seed purposes. The *Times'* Odessa correspondent states that the appeal of the Russian press in aid of the sufferers by the Indian famine has had little or no response in the south of Russia.

It is estimated that there is a deficiency of seven million bushels in the Australian wheat crop.

A COURT-MARTIAL held at Barcelona has sentenced to death eight Anarchists concerned in the bomb outrage in June.

FORTY men have been killed by a fire damp explosion in a colliery belonging to the Austro-Hungarian State Railway. Twenty-seven others are missing and access to those entombed is impossible.

LORD George Hamilton has written to the Lord Mayor stating that he has just received a telegram from Lord Elgin advising that until the situation is more fully developed nothing should be done in England to raise funds. No definite opinion can be formed until the results of the winter rains are known. Lord George Hamilton has given a similar reply to the offer from the Lancashire Cotton Duties Committee to raise an Indian Famine Fund.

SIR Henry Norman, Sir Edward Grey and Sir David Barbour have been appointed Commissioners to enquire into the West Indies sugar industry.

It is officially stated in Paris that General Gallieni, commanding the forces at Madagascar, has completely subdued the rebels at Imerina, and is now hunting down the scattered remnants.

DR. Granier, convert to Mohamedanism, has been elected Radical member of the French Chamber. The Doctor wears a turban. This toleration is unknown to the English, who are given to tradition and precedent.

MR. Rhodes and Sir Frederic Carrington, with a number of Imperial troops, have arrived in Durban. Mr. Rhodes in an interview, on his return, said the war was now over, and only a few petty Mashonas were now giving trouble. All Imperial troops will now be withdrawn, except two hundred Hussars.

A Russian ukase has been issued sanctioning the formation of a company to construct and work a railway from a point on the Western Frontier of

Heilungchiang to a point on the Eastern Frontier of Kirm and connect with the Trans-Siberian line. The capital is five million roubles. The shareholders must be Russians or Chinese, the work to be completed in six years. The Russo-Chinese Bank is promoting the company.

THE Tsar has sent a band of Russian musicians, and also a quantity of instruments including an organ and piano to King Menelik.

FRANCE has resolved to reorganise her artillery and introduce a new field gun. Germany, therefore, also proposes a similar measure.

It is officially announced at Lisbon that the Portuguese Governor of Lorenzo Marquez will visit the German Consul who will return the call, and that the Portuguese warships will salute the German ships which will return the salute, thus settling the difficulty in that quarter.

THE Mint having ceased to coin rupees (the Calcutta Mint would turn out one crore annually) and thus there being no bullion reserve, the Government of India, for these and other reasons, at the sitting of the Supreme Legislative Council on Thursday, the 17th December, took power, by amendment of the Indian Paper Currency Act, 1882, to increase the Government Currency reserve from 8 to 10 crores. For one thing, the new investment in Government securities, makes an addition to the Public Treasury in the shape of interest.

THE Drawing Room, as was expected, was a brilliant one. The attendance was under 300. Thus:—

Private Entrée	52
Public Entrée	142
New Presentations	95
Actually Present	289
Unavoidably Absent	98

The numbers for 1894 (we have no record for 1895) are:—

Private Entrée	40
Public Entrée	166
New Presentations	104
Actually Present	310
Unavoidably Absent	127

The publication of the Supplementary Levée List, necessarily alters some of the figures given by us last week. The corrected figures are:—

Private Entrée	...	125—Asiatics...	15...Europeans...	110
Public Entrée	...	874—Asiatics...	262...Europeans...	612
New Presentations	...	226—Asiatics...	59...Europeans...	167
Actually Present	...	1,225—Asiatics...	336...Europeans...	889
Unavoidably Absent	...	476—Asiatics...	174...Europeans...	302

THE Bengal Legislative Council opened its session on Saturday last, the Lieutenant-Governor presiding. In opening the proceedings, the President remarked that

"he desired to say a few words regarding the position of the Legislative business which would engage their attention during the present session. First on their list was a 'Bill to amend the Bengal Local Self-Government Act of 1885.' Hon. members would remember that the Hon. Mr. Risley had mentioned at the last session that it was not intended to proceed with the smaller measure then before the Council as it had been suggested that a larger measure should be introduced. This latter had been in circulation and many opinions had been received regarding it and certain other opinions were awaited. The Local Government were in correspondence with the Government of India, and he was not in a position yet to say when it would be possible to lay the measure before the Council. It would have to be carefully considered, especially as it might be found necessary to add to it clauses dealing with the better sanitation of Bengal and the matter of water-supply. He hoped, however, that the Bill would be introduced and taken up in the course of this session. Then there was a 'Bill to amend the law relating to the Partition of Estates.' The Government had received valuable opinions in regard to this measure, and he thought that it would be found necessary to introduce very material changes in the Bill which had already been introduced. The Bill had been referred to a Select Committee, and he could not say what chance there was for its early introduction. The only other Bill before the Council was the 'Bill to amend the Public Demands Recovery Act of 1895.' This Bill too had been referred to a Select Committee. A mass of evidence had been received in regard to it which demanded very careful attention. The above were the measures actually before the Council. Regarding projects of law the first measure would be a 'Bill for amending the Bengal Tenancy Act.' He assured the hon. members that this measure would not have been undertaken but for actual pressure. The Governments of India and Bengal, he was happy to say, were at one regarding the provisions of the amending Bill which was now before the Secretary of State. He was not prepared at this stage to state the nature of the measure, but he was confident that when it was introduced it would command the support and assent of not only officers of Government engaged in Settlement work, but also of those interested in land and those interested in the welfare of the rayyets of Bengal. The Government proposed shortly to introduce a 'Bill to consolidate and amend the law in force in Bengal relating to the Excise Revenue.' That measure had yet to be submitted to the Government of India for approval, but he had no doubt that before the close of the session it would be placed before

the Council and the public. There was also a small Bill to amend the Calcutta Municipal Consolidation Act of 1888. The Government had sanctioned the introduction of the Bill, a draft of which was referred back to the members of the Municipal Corporation for opinion so far back as July last, but that body had not yet pronounced on the measure. The main object of the Bill was to amend some of the licensing schedules and to correct some slight ambiguities in the building regulations. It was perhaps not a matter for regret that the Commissioners had not yet taken any notice of the Government's request for opinion, for it was possible that it would be found necessary to make very considerable and important amendments in the Bill. Further, a revised draft 'Bill to amend the Salt Law in Bengal' had been submitted to the Government of India. He hoped shortly to receive the assent of that Government to the introduction of the measure. The Secretary of the Council also proposed to draft a 'Bill for further shortening the language used in Acts of the Lieutenant-Governor of Bengal in Council and for other purposes.' Hon. members would remember that this was an ancient measure, dating so far back as 1887, and the measure was a meagre one. Its object was to enact once for all certain definitions and clauses likely to be used frequently in Acts of the Bengal Council. It would supersede the Act of 1887. The Government of India had a similar Bill under consideration, and it was intended that members of this Council should see that Bill before introducing their own. Then there was a small 'Bill to enlarge the scope of the Charitable Trust created by the Will of the late Mrs. Sally Murray,' the object of which would shortly be explained to them by the hon. member in charge of it. The Government had also ready, or nearly ready, for introduction a 'Bill to regulate the enhancement of rents, the commutation of predial conditions or services, and the registration and resumption of dependent taluks and tenures in parts of Chota Nagpur.' For years past there had been constant disputes between landlords and tenants in the parts referred to in consequence of the excessive demands of the former for labour and the refusal of the rayyets to render any service at all. The chief object of the Bill was to remove the subject of the most frequent disputes. It also provided for the registration of small tenures and other matters, in accordance with local customs. When the Bill was passed it was proposed to extend the Bengal Tenancy Act with certain modifications to Chota Nagpur. The Council was fortunate in having the H.C. Mr. Grimley as a member. He had been Commissioner of Chota Nagpur for many years and was thoroughly acquainted with local conditions and was able to take charge of the Bill in a manner none other of them could pretend to. Lastly, there might be a 'Bill for the suppression of rain gambling.' Opinions differed as to the expediency or possibility of legislation in this matter. Nevertheless a draft Bill which the local Government had drawn up had been submitted to the Government of India. There was a strong body of opinion in Calcutta, as in Bombay, in favour of such legislation on the lines of that adopted in Bombay. When the draft received the Government of India's sanction it would be submitted to the public for opinion."

THE brilliant success of the Bengali at the last competitive examination for the India Civil Service has attracted the attention of the New World. We read in the *Nation* of New York:—

"The latest development of Lord Macaulay's scheme of competitive examination, as applied for recruiting the high-salaried and much coveted India Civil Service, is of interest, in a general way, not only to Englishmen. At present the subjects recognised for the examination in question, with the maximum of marks assigned for each, are as follows: French, German, English, Sanskrit, Arabic, English Composition, 500 each; Greek, Latin, 750 each; Mathematics, Advanced Mathematics, 900 each; Elementary Chemistry and Physics, Higher Chemistry, Higher Physics, Geology, Botany, Zoology, Animal Physiology, 600 each; English History, 500; Greek History, Roman History, 400 each; General Modern History, Political Economy, and Economic History, 500 each; Logic and Mental Philosophy, Moral Philosophy, 400 each; Roman Law, English Law, Political Science, 500 each. None of these subjects are obligatory. For the Open Competition of August, 1896, the Report on which has recently been issued, there were 193 candidates for 62 vacancies. The age of a candidate was fixed at above 21 years, and under 23, on the first of last January. Of the 62 successful competitors, as was likewise the case with the unsuccessful competitors, a large proportion also competed for less eligible appointments, namely, 8 for Eastern Cadetships, 10 for the Home Civil Service, and 32 for both. Out of the 62, at least 38 are said to have qualified themselves at Oxford, and there are no more than three natives of India. Only two of the candidates who passed, and five of those who failed to pass, brought up Sanskrit as one of their subjects; and, with the exception of a single unfortunate (presumably a Muhammadan) who was rejected, No. 94, no one brought up Arabic. The selected candidates will now, enjoying a stipend from the Government, devote themselves to certain prescribed studies till next October, when, on testifying to the Civil Service Commissioners a sufficient acquaintance with them, and satisfying the Medical Board of their physical fitness, they will enter on the performance of their duties as servants of the State. By no means, however, should the fact remain unnoticed that the list of successful candidates mentioned above is headed by a Bengalee. This remarkable Oriental who was not a twelvemonth past his majority at the beginning of the year, bears the name of Chatterjee, as it is the fashion to write Chatterji, which is substituted by corruption and otherwise, for the scholastic Chattopadhyaya. His ten subjects and the marks he scored for them are given as: English, 324; Sanskrit, 279; English Composition, 405; Mathematics, 179; Advanced Mathematics, 27; English History, 365; General Modern History, 423; Political Economy and Economic History, 249; English Law, 211; Political Science, 389. While his marks reach the total of 2,851, those of the sixty-second candidate amount, for eight subjects, to only a trifle more than four-sevenths of that number, viz., 1,648."

We have not seen any account approaching this in any English or Indian newspaper, although all have expressed their satisfaction at the feat achieved by the Bengali. We are reminded of what a brilliant graduate of the Calcutta University, the first M. A. in Mathematics, our Professor in the Presidency College, the late Babu Ramanath Nandi, remarked when the age for the Civil Service Examination was reduced. He was not sorry for the reduction, for the Bengali youth would, he said, be prepared for any examination and beat the English youth even in their own country.

THE Municipal Commissioners met specially on Monday to consider the Governor's rebuke for negligence and tardiness and the threat to abolish the municipality unless they proved better boys. It commenced with opposition.

"Mr. Simmons moved that the meeting should be adjourned, as there had not been sufficient time allowed for them to consider the resolutions which were to be submitted. He had only received a copy of them some forty hours before the meeting, and that according to provision 53 of their charter was not in order. The amendment was seconded.

Babu P. Mullick opposed the motion and said there had been ample time for the consideration of the whole question considering that three weeks had elapsed since the delivery of the speech. Those who had not had time to digest it would never find time and would never be ready to discuss it.

Babu Kally Nath Mitter said that if the members were not prepared to discuss resolutions four and five, he was willing for the other three to be considered. Mr. Simmons could not accept the last speaker's suggestion. The whole of the resolutions must stand or fall together.

Mr. Braunfeld said to adjourn the discussion would be but to keep alive feelings which could not conduce to harmonious working.

Mr. Farr had had no authentic account of the Lieutenant-Governor's speech beyond what had appeared in the daily press, and he thought the discussion should be adjourned until they had all been placed in possession of an authentic account of the speech.

Babu N. N. Ghose said delay would serve no purpose, but to enable Mr. Simmons and his friends to prepare a reply to the resolutions. He (the speaker) and his friends had come prepared to speak to and vote upon the resolutions (hear, hear and applause).

Ultimately the motion was put and lost by 16 votes to 30.

At this point Sir John Lambert, the Hon. Mr. C. C. Stevens, Mr. Baker, Mr. Farr, Mr. Rustomjee, Mr. P. McGuire, Mr. Simmons and Moulvi Ahmed rose and quitted the meeting."

The obstructionists having left, the unionists had had their own way and they recorded, without any opposition, two resolutions, namely,

"That the Commissioners in meeting hereby record their respectful but emphatic protest against the condemnation passed upon them by His Honor the Lieutenant-Governor of Bengal, on the occasion of his laying the foundation-stone of the New Drainage Works as being unmerited and inappropriate to the occasion, as involving a grave misapprehension of the facts of the case, and as amounting to a severe censure of the municipal administration of the town without the commissioners being allowed the opportunity of explanation or defence."

"That the introduction of the elective system into the municipal administration, apart from the stimulus which it has given to the public spirit of the citizens of Calcutta and the wider public interest it has created in the municipal affairs of the city, has been attended with great sanitary reforms, and that the improvements effected since the introduction of the system would bear favourable comparison with similar improvements made during any corresponding period in the past history of the municipality when it was under Government control or under the control of the Justices entirely appointed by the Government."

The proposer of the second resolution, Baboo Kally Nath Mitter, the first being moved by Babu Surendra Nath Banerjee,

"confined himself principally to reading lengthy extracts from past health records showing that the sanitary condition of Calcutta had widely improved since its government had been in the hands of elected commissioners.

Mr. Phelps supported the resolution observing that his experience had led him to the conclusion that the elected commissioners did their work infinitely better and took more real interest in the welfare of the city than did the nominated commissioners.

Mr. Braunfeld alluded with feelings of surprise to the fact that such sentiments as those given expression to by Sir Alexander Mackenzie about restricting the elective powers of the corporation should have come from one who took Birmingham—one of the most liberal cities in England—a voice 'Unionist' as his model. The elective system was one of the grandest institutions of Englishmen. (Applause.)

The chairman said he thought a wrong construction had been placed by some of the members on Sir Alexander Mackenzie's words. He (the speaker) did not believe the latter had for a moment intended to convey that there had been no progress. They all knew there had been (applause) although he was speaking only a short time ago to some one who said that Calcutta was in a worse state to-day than it was twenty years ago. That, however, was not the general opinion."

The discussion of the remaining resolutions was adjourned to 7th January.

There might be some justification for Mr. Simmons' motion for adjournment. But sufficient time having elapsed since the condemnation, the Commissioners were in no mood to further postpone its consideration, unless they chose to pocket it coolly. Mr.

Farr had not even the show of reason for his protest against the meeting. The Governor's speech was spoken direct to the Commissioners and who was to supply a correct version of it? Mr. Risley's explanation might well be taken exception to as not being addressed to the Commissioners. It transpired in the course of the meeting that it was at one time thought, by way of protest, to resign the office of Commissioners, but better counsel prevailed, and the mistake of 1884 was repeated.

REGARDING the letter of Mr. Skrine, Commissioner, Chittagong, on the Prohibition of the Export of Rice, published in our number, we have received the following:—

"I entertain no doubt that the high level of price is to a large degree due to a combination amongst the *bunniah*s, who use our postal telegraphs with effect and have formed a vast 'ring' extending over the three Presidencies. But how are we to fight them, and within the power of Government to break down this organization think not, and further that an attempt to do so would convert a scarcity into a real famine. Precisely the same thing has happened in England itself, where the bakers have formed a ring, and keep up the price of bread to a level nearly uniform, not varying it when the price of falls, and only raising it when the latter rises. 'If such things are in the green tree what shall be done in the dry?' Government powerless in such matters, which show a decay of the spirit of help and the aggressive 'John Bullism' which used to be so powerful an engine making for happiness and liberty."

THE Scotch Professor of Divinity, Glasgow, has expressed the following opinion on Dr. Jogender Nath Bhattacharyya's "Hindu Caste Sects":—

"I have now looked more carefully over Dr. Bhattacharyya's work on Caste. It is very useful and valuable as a clear and reliable statement to the castes and sects, but my estimate of its value as a contribution to the philosophy of religion is not high. Its standpoint is too narrow; its attitude too negative.

But the author promises a fuller exposition, and we must wait for it in justice. It is intelligible enough that educated and emancipated Hindus should turn upon the priestly and hierarchic system with a feeling like scorn and indignation, but a longer historical training and deeper insight into what is good even in the traditional system would modify that."

THE new Additional Member of the Governor-General's Legislative Council is Babu Joy Gobind Law. He is a practical man of business with experience in the mercantile world, and we hope he will bring general satisfaction.

SIR Alfred Croft having resigned his office of Vice-Chancellor of Calcutta University, Mr. Justice E. J. Trevelyan has been appointed in his place. The Convocation has been fixed for Saturday, 16th February, 1897, at 3 P.M.

REIS & RAYYET.

Saturday, December 26,

SANITATION OF CALCUTTA.

THE FIRST STEP—THE LOTTERY COMMITTEE.

THE memorable minute of the Marquis of Wellesley, as we pointed out in our issue of the 12th December, laid the foundation of the sanitary improvement of Calcutta. On the 16th June 1803, he wrote:—

"The increasing extent and population of Calcutta, the capital of the British Empire in India, and the seat of the supreme authority require the serious attention of Government. It is now become absolutely necessary to provide permanent means of promoting the health, the comfort, and the convenience of the numerous inhabitants of this great Town."

The Committee appointed for consideration of the ten recommendations on that behalf consisted of Major-General Fraser, Major-General Cameron, Mr. P. Speke, Mr. T. Graham, Mr. W. A. Brooke, Mr. J. Taylor, Mr. R. C. Birch, Colonel Pringle, Mr. Davis,

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

Mr. G. Dowdeswell, Lieutenant Colonel Harcourt
Captain Shawe, Lieutenant Colonel Garstin, Mr.
T. Dashwood, Mr. H. Tucker, Mr. W. Fairlie, Mr.
A. Colvin, Mr. D. Ross, Mr. J. Alexander, Major
R. Colebrooke, Captain Wyatt, Captain Anbur
Captain Preston, Captain Blunt, Captain Sydenham
Mr. C. F. Martin, Mr. W. C. Blaquiere, Mr.
Thornton, Mr. A. Macklew and Mr. R. Blechynde.
These gentlemen were informed of their appoint-
ment by the Chief Secretary, Mr. J. Lumsden, on the
day in which the resolution was drafted. Cap-
tain James Blunt, of the Engineers, was ordered to officiate
as Secretary and Mr. Tiretta as clerk. This
notification was issued from the Council Chamber, Fort
William.

Before this another committee had been formed, but why they were superseded cannot be traced.

The Governor-General in Council is pleased to appoint the following gentlemen to be a committee to consider and report means of improving the Town of Calcutta:—

Major General Cameron, P. Speke, Esq., T. Graham, Esq., Taylor, Esq., R. C. Birch, Esq., S. Davis, Esq., G. Dowder, Esq., Captain James Armstrong, Major Shawe, Lt-Col. Garth Thomas Dashwood, Esq., Henry St. George Tucker, Esq., Parille, Esq., A. Colvin Esq., James Alexander, Esq., Lt.-Col. Campbell, Esq., Captain Thomas Anbury, Lt. B. Sydenham, C. F. Marryat, Esq., W. C. Blaquiere, Esq., E. Thornton, Esq., Alexander Russell, Esq., John Shoolbred, Esq., the Rev. Mr. Brown, the Rev. Mr. Buchanan, Lt. Col. Mercer, R. P. Smith, Esq., H. T. Colclough, Esq., Col. Green, M. G. Prendergast, Esq., and R. Buchanan, Esq.

Ordered, that the Committee be informed that the general objects to which their attention is to be directed will be notified to them forthwith, as well as their place where Meetings are to be held, and that His Excellency in Council in the meantime desire they will immediately obtain such information as can be procured with respect to the causes of the late destructive fires in Cape Town and suggest, for the consideration and orders of Government, such measures as shall appear to them to be best calculated to guard the Town from the recurrence of this calamity at any future period.

Ordered that the Committee be also informed that Mr. P. [unclear] is appointed to officiate as their Secretary.---Criminal
June 1804."

On 4th July 1804, a few gentlemen of this committee submitted a brief report. In it they stated

"That the houses be constructed in straight lines, or in straight as may be practicable, leading from East to West streets or passages running North and South, at the distance of 200 feet from each other.

That tanks or wells, as shall appear most convenient for examination, be dug in the different wards of the Town, and a fire engine be established in the principal wards, or at such places as shall appear to be most convenient for affording relief in cases of fire.

In consequence of the present singular and ill-judgment of most of the houses and buildings of the Native extremely difficult of access at any time, and on the fires the narrow passages become destroyed either by some of the buildings, or by the populace themselves, individuals frequently find it impracticable to escape from

The question above stated of digging tanks and convenient places in or near the different wards, is obvious to facilitate and expedite the extinction of the flames when aided by the Fire Engine, which we have should be established at convenient places. The earth be excavated from the tanks would likewise be of use filling up the inequalities of the ground. The Nation by these means, be furnished with pure and wholesome

In the progress of our enquiry, it has been suggested that it would be expedient to encourage the erection of tiled instead of straw roofs, by a remission on the form on the houses, or of the ground rent, or of both. We are sensible of the advantages which tiled roofs possess over straw, and should be happy to suggest any means calculated to promote the most general use of the former, consistent with the circumstances of the lower order of the Natives.

We do not, however, conceive that the end proposed can be attained by the remission of the Land Assessment on Houses. On a reference to the Collector it appears that the aggregate amount of the Tax occupied by all the tiled and straw houses throughout Sicca Runes 7,346-13-4 per annum.

Immediately connected with the improvement

(2) For the lottery they said that "We are aware of the objections which are usually urged against raising supplies in that way, but whatever force those objections may have in other countries, it does not appear to us that any ill consequences are likely to result from the establishment of a Lottery in India. The habits and conduct of the Natives, effectually exclude them from any participation in a Lottery conducted on a large scale. Even in England the evil does not arise so much from the purchase of tickets as from the Offices which are opened for ensuring them which would of course be entirely prevented in this country. At all events, if Lotteries be necessarily injurious to the morals of people, the evil at present experienced in Bengal is of as great a degree as it could be if the plan now proposed by us were to be adopted, as Lottery tickets are regularly sent round for sale from Madras." (3) As for other supplies, they can be done without much inconvenience to the Government.

(4) The Committee could have proposed addition to taxes, for the improvements in contemplation but they are unable to do them on but they are unable to do them raising taxes within the town.

(5) For the improvement of the environs of Calcutta they received an additional report, which pointed out the necessity of constructing new roads, widening old roads and maintaining ditches in proper order in Garden Reach, Allypore, Cally Ghaut, Russapugla, Baloo-gunge, Boitacannah, Bally Ghaut etc.

It will be seen from these reports that advantage was taken of the fire to open new roads in the town south of Dhurmtolla. The great plague of London in 1665 was checked by the fire of 1666 and the conflagration led to the sanitary improvements of the city. It was so with Chicago.

The two offices for improvement of the town were the Lottery Committee's and the Chief Magistrate's. They evolved order out of chaos and greatly improved the sanitation. The Lottery Committee were foremost in the construction of new roads and tanks and the improvement of the streets. The Committee started with the object given in the resolution passed by them on the 18th December 1817:—

First. That the health of the town ought to be considered as the first object to which the attention of the Committee ought to be directed, and that with this view their first object ought to be applied in the first place to the filling up of all the holes or deepening and cleansing the miry Tanks and Jheels, several of which exist at present in the most populous parts of the Town. The second place, to prevent the accumulation of filth, means of new Drains, common Sewers, and Kennels. And in the third place, to promote Ventilation, as far as can be effected, by pulling down high and spreading trees, and by increasing as much as possible the number and size of Streets or Roads running in a straight line from South to North.

Secondly. That next to the health of the inhabitants, the Committee should direct their attention to their improvements to the personal safety of passengers in the streets, with a view to which it would be highly desirable to open up the narrow parts of the most frequented Streets, where the commodious Roads in a parallel direction cannot be opened, and particularly to round off sharp angles. The safety of foot passengers should also be considered, and Footpaths formed by the Wall and Kennel, wherever the width of the old Streets will admit of this, and in all the new Roads that may be opened, the Committee.

Thirdly. That convenience and the Committee be approached to purposes where these are the only objects proposed, until all the foregoing objects have been accomplished, as far as may be in the power of the Committee.

Fourthly. That a preference be given to such plans of improvement as will secure the greatest number of the important objects, at the smallest expense.

Mr. H. J. Shakespear recorded a minute on the 13th January 1820 and wrote at Mr. John Trotter, Secretary to the Lottery Committee, recommending the construction of roads in the northern part of the town north of Burra Bazar, between Circular Roads, containing a dense population. In another memorandum dated 7th February 1820, he proposed the appropriation of a considerable sum of money without which substantial improvements would be hopeless. But with all the evils of the time he had "reason to believe that the town was never kept more free from an accumulation of dirt or the Drains less uncleanly than they have been during the

last six months." He also submitted a statement of the number of Hindus taken to Kasseh Mittee Ghat for cremation. Here it is:

	1815	1816	1817	1818	1819

Babu Rupnarain Ghosaul, Sheristadar of the Lottery Committee, in his deposition before the Fever Hospital Committee, stated that the Lottery Committee were always gainers by sale of lands after improvements. The dearest portion of their acquisitions was in the Strand and Clive Road and the cheapest in Loudon Street and Short's Bazar. In Amherst and Cornwallis Streets they made also many improvements. Chitpore Road, Wellington Square, places near the new mint also shewed progress as other portions. During the course of their acquisition the Lottery Committee were involved in a long and heavy litigation with Gopee Mohun Deb, the father of Raja Sir Radhakant Deb, who, in April 1824, proceeded against the Committee for forcibly and against the will of the complainant, breaking and entering upon divers lands partly in the possession of the complainant and partly in possession of tenants, and commencing to make public roads, and blocking up ghauts and destroying them. He, therefore, prayed that the defendants might be restrained by injunction from making the roads and from committing trespasses, and that a decree be given against the Committee for the damages done. The Hon'ble Sir Edward Ryau, Chief Justice, Mr. Justice Grant and Mr. Justice Seton delivered judgment on the 5th June 1840 by dismissing the case. Though the Committee triumphed, the triumph may be said to have exhausted their efforts and resources. At any rate, the body had ceased to be useful. For, in a letter addressed to the owners and occupiers of premises in Calcutta by Mr. D. M'Farlan, dated the 1st December 1833, we find that "The Lottery Funds may now be said to be extinct for all purposes of improvement in Calcutta."

On the 2nd March 1837, Mr. Joseph de Hezeta, Secretary to the Lottery Committee, gave a statement for the twelve years from 1825 to 1836, from which we find that the profits were Rs. 12,72,193 and the expenses Rs. 2,43,709. On December 15, 1836, the inhabitants of Boitackhana petitioned C. Trower, C. R. Barwell, J. Master, D. MacFarlan and G. J. Gordon, Esqs., Members of the Lottery Committee, for a public tank in that quarter. The application was refused on the ground that they had no power to entertain it.

THE CONGRESS.

The next may be said to be the Congress week in Calcutta. The President-elect, the Honourable Rahimtula Muhammad Sayani, M. A., LL.B., who had declined the honour last year, has arrived, and the preparations by the Reception Committee, let us hope, are complete. The working committee, for the nonce, have made up their differences and special arrangements have been made to avoid the repetition, if possible, of past years' scandals. We give a cordial welcome to the delegates and wish every success to the 12th sitting of the National Assembly. The Congress, though as old as twelve years, has not yet a regular constitution of its own. That question will be discussed in the present sitting. In the mean-

to oust the contractors, and maintain the interests of trades' unionism, the Council. No one supposes for a moment Mr. Holloway, were guilty of tampering with the accounts. They

You will have noticed the motor car boom. Here is a cutting to show the state of public opinion. I see an unfortunate man, going underneath a car to effect some repairs, knocked his back against the pipe containing the motive power, with the result that having a lighted candle in his hand, he was nearly burned to death!

"Mr. H. W. Lucy has no belief in the future, or at least in the immediate future, of motor cars. He says that the recent performance was a melancholy fiasco. On the motor car people have, so to speak, to ride on the engine, while it must take its chance with rough roads and smooth. That, as passengers to Brighton found, is a terrible experience which will have to be averted before motor cars can compete with existing street-cabs and buses. There is as yet no sign of such a triumph. I have not seen a single motor car at work in London, and nobody whom I have asked has seen one, but certainly the public is very anxious to assist in the new departure, and will be very glad to use the motor cabs if they are cheaper and better than our hansoms and growlers."

An Editor's Retrospect by Mr. Cooper of the "Scotsman" is a book of abounding interest, but, postponing for the present a fuller reference to it, I take some notes of the "Scotsman" itself from "Famous Newspapers." The first number appeared on 25th January 1817. It was described by Lord Cockburn as the "first Scottish paper that combined independence with intelligence, and moderation with zeal. It though in these ante-reform days it was frowned upon by the Government and aristocracy." The two first years of its existence it yielded the proprietors dividends of 25%. The circulation rose to 1,700 copies after 1823. The first price was 10d of which the Government annexed 4d as stamp duty. In 1836 this duty was reduced from 4d to 1d and that of the paper to 4d, the result being a rise in the circulation to 2,400 copies. In 1855 it appeared as a penny daily. During the Crimean war it rose to 6,000 a day, but fell back to 4,000 on the conclusion of peace. In 1859 it stood at 10,000, in 1862 at 15,000, and in 1868 at 17,000.

In 1865 a bold experiment was made of having agents in all the centres of population—large and small—throughout Scotland. In a few months the country agents rose from 80 to upwards of 1,000. In 1870 the circulation rose to 30,000 copies daily, three years later to 40,000 and in 1877 to 50,000. It is now close on 60,000. Another bold experiment was made in 1872. By an arrangement with the North British Railway, a special engine with a packing carriage attached runs daily (bar Sundays) from Edinburgh to Glasgow without stoppage, thereby enabling the paper to be delivered in Glasgow at 5 in the morning, so as to catch the early trains from Glasgow to the western centres. The publication is therefore practically simultaneous in Edinburgh and Glasgow. Again, in February 1866 the proprietors of the "Scotsman" arranged with the Electric Telegraph Company to have a wire from London exclusively at their disposal from 6 p. m. to 3 a. m.

The success of this arrangement was so great that the "Times" followed the example, and now has a "special wire" of its own connecting its office in London with Paris and Vienna. The "Scotsman" again rendered a signal service to the Provincial Press, by leading the way in obtaining admission for its reporting staff to the gallery of the House of Commons. The growth of its advertisements has been most striking. In 1817 there were only six in each issue. In 1820, 16. In 1825, 40. In 1854, after the repeal of the paper duty, 150. Recently a single issue contained 3,913, and the number printed in 1884 was 4,34,000. These are marvellous figures. The "Scotsman" from its first start down to 1886 was a splendid force on the Liberal side. In that fatal year Mr. Gladstone drove it, as well as the Glasgow "Herald," out of the Radical fold, and both papers have since 1886 done yeoman's service in fighting the Unionist cause against the Separatists. The "Scotsman" in Edinburgh has no rival. The Free Kirkers have more than once started a paper of their own, but the issue has ever been a dismal failure. I rather think your ex-colleague of Serampore, the Rev. Dr. George Smith, at one time acted as Editor of one of these papers, but, with his wide experience as Editor of the "Friend of India," he fretted under the intolerable control of the Edinburgh Ecclesiastics. When Dr. Smith would endeavour to instruct them in imperial questions, they flouted him, caring far more for trumpery local news about church squabbles and old women's fables. But, it is said, Lord Tweedmouth is going to face the breach once more, and next year we are promised a Radical journal to oppose the influence of the "Scotsman" in Edinburgh, and Scotland generally. Whether the resignation of Lord Rosebery may have interfered with the speculation, I do not know. The party can always depend on the money-bags of Lord Tweedmouth and of Lord Overton who has still to contribute to the party funds in recognition of his peerage. Writing of him reminds me you have just narrowly escaped the infliction of a visit from the

American windbag, Dr. Pentecost. This excellent arrangement for escaping our London winter and enjoying your grand cold weather season has been frustrated by the inability of Dr. Pentecost to secure competent men to fill his pulpit during his absence. He has the ridiculous idea—without knowing anything of India beyond a short residence and a cold weather scamper—that India is, to use Bible language, "to be born in a day." He wishes to have a hand in the harvest, and pious, heavy Lord Overton guaranteed his expenses to the tune of £1,000. Good wages, indeed, seeing it would keep three if not four missionaries for a twelvemonth! Dr. Pentecost, although not a Presbyterian, is in charge of the Marylebone Presbyterian Church, said to be the richest in London, but that Church must be weak indeed that has to fall back on an American congregationalist to fill the pulpit, in spite of Dr. Dykes' eleven students.

However, Dr. Pentecost knows how to make good terms, for while the bulk of the clergy of the Presbyterian Church of England have to content themselves with an income of £200, he would not undertake to save souls unless an income of £1,500 a year was guaranteed, in addition to £250 for house rent. At least, such is the story. But I have drifted far away from the "Scotsman." It is an illustration of the "association of ideas." Lord Rosebery suggests Lord Overton, he again suggests Dr. Pentecost, and now your readers have before them a brief history of one of the most remarkable developments of the Presbyterian Church of England for which it is indebted to the lay Archbishop of the Church, Mr. H. M. Matheson, the great China merchant.

Coventry Patmore. This singular man has gone over to the majority. He began life as a humble clerk in the British Museum, and he added to his financial difficulties by marrying a daughter of Dr. Andrews, a Congregational minister at Walworth. She brought him no dowry beyond her personal beauty and a sweet disposition. Patmore immortalized her in his "Angel in the House." But she was a victim to consumption, and met with an early death. He joined the Roman Church and soon after wedded a rich wife, which enabled him to abandon the British Museum, and assume the role of the country gentleman. On the death of this second wife, he encountered matrimony for a third time. He was evidently determined to face the wrath of St. Peter. You remember the story of the man who knocked at the gates of Paradise, when the gate was unlocked by Peter. To Peter's question as to whether the visitant had been married, the glib answer came, "I have been married twice." Thereupon the apostolic answer came in a stern refusal. "Once we forgive," quoth St. Peter, "but never twice." Let us hope Coventry Patmore met with no such repulse!

The Dockers' Strike at Hamburg. This has been brought about by the restless intrigues of two notorious "birds of evil omen"—J. H. Wilson and Tom Maun. The number of men who have struck work is put down at 12,000. It is anticipated the strike will extend to Bremen and Kiel as well as to the most important continental and English ports. Maun has been quietly deported to Grimsby. What a pity German law could not have kept Maun and Wilson in prison for five or six years! It was the Dock strike here some seven or eight years ago which inflicted a blow on the Thames shipping interests from which it has never rallied. That strike was engineered and fomented by John Burns. In fact, it was by it he fought his way into public life. But now that he is an M. P. and LL. C., you will not see him facing danger as do Maun and Wilson, thereby proving himself worthy of one of the epithets the "Globe" has attached to his name. When one thinks of the poor workmen (and their wives) of Battersea denying themselves of actual necessities to support this demagogue in luxury, (if it is luxury compared to his former artisan life) one marvels at their forbearance.

Spain and Cuba. I have kept you fully informed from time to time of the state of things in Cuba. So far there has been no improvement, indeed things are going from bad to worse for the mother country. General Weyler is evidently not competent for the guerrilla warfare in which he is enmeshed. He has 60,000 troops to the rebels' 10,000, and were it a pitched battle on open country, no doubt his task would be comparatively easy. But the rebel leaders are far too sagacious to risk a pitched battle. Better informed by the country people of what the Spanish troops are doing than is General Weyler of the tactics of the rebels, the latter draw him on and on into difficult ground, and when he reaches the rebel camp with his half-starving soldiers, it is only to find the place deserted, and nothing to welcome him but the ashes of the camp fires. The result of those marches and countermarches, with a badly worked commissariat, and disease hovering about, is that the Spanish General has had to send 6,000, sick and wounded into hospital at Havana, where his sick list, by the last advices to hand, now exceeds 16,000, or let us say 6,000 more than the effective fighting force of the rebels!

West Indian Sugar Trade. Cuba naturally suggests our own West Indian possessions, and the deplorable state into which their staple industry—sugar—has fallen. The matter has become one of such clamant urgency, that Mr. Chamberlain is about to send an Imperial Commission to enquire, on the spot, what is the present

condition of the industry, and what remedies, if any, of a practical character can be suggested for the adoption of the Home Government. We are apt to overlook what our West India possessions are. So high an authority as Mr. D. Morris writes: "We have in British Guiana alone an area of country equal to two Ceylons quite untouched; in British Honduras we have more than the area of the Fiji Islands; to Trinidad we could add the wealth of the Straits Settlements, and with the resources of the unworked soil of Jamaica we might emulate the prosperity of at least four colonies of the size of Mauritius." These are striking words and deserve to be laid to heart by every one who prides himself on being a loyal subject of the great Queen-Empress. Of the exports of British Guiana, sugar and its accompanying products may be calculated roughly to yield 92% of the total exports, Barbados 94%. In Jamaica itself 60%. In 1880 the total production of sugar for the world was 3,830,000 tons. Last year it had risen to 7,879,000. But then sugar is of two kinds, cane and beet. In the year 1880 of cane sugar 2,200,000 tons were produced, while of beet only 1,630,000. Last year all this was changed, cane showing 2,904,000 tons, against 4,975,000 of beet. The West India planter is sadly handicapped by the bounty system of foreign Governments, and not only so, but the severe protective duties on the continent of Europe handicap him still more. It is one of the strongest points in favour of Free Trade, for whereas in Great Britain the consumption per head of the population comes to 73lbs, in France, where there is a duty of £24 a ton, it falls to 28lbs per head. In Germany it is 26lbs and in Austria 17lbs. The one hope is that the bounty system will be modified. "Last year's crop involved a cost in round numbers of nearly £5,000,000" (five millions) to the bounty-giving Governments and the poor tax payers in France, Germany, and Austria are beginning to make their voices heard. They complain bitterly of being taxed for one set of the community only, and there are signs of an uprising such as the most autocratic Government on the Continent will be unable to withstand.

The appointment of an Imperial Commission will so far prove acceptable to the West India planter, but can he hold on in the meantime, until the Commission reports? If it takes as long as some recent ones any time between three and seven years may elapse, the longer term certainly if Sir W. Wedderburn and Mr. Dadabhai Naorojee are among the members. But fortunately for the West India planter, these wordy cranks are reserved for Commissions on India, where time being of no object to them, they squander it as only cranks and fanatics can.

Rhodesia. Lord Grey, the Administrator of Rhodesia, has addressed a long letter to the Board of the British South African Company. In it he sketches the new policy recommended by himself and Mr. Rhodes, to be adopted in administering that vast tract of country. It is an acknowledgment that on the defeat and death of Robengula, it was most erroneously "supposed that the native power of resistance had been definitely destroyed." It was assumed the Matabele, after the complete conquest to which they had succumbed, would, like the Sikhs, loyally accept the result. Among other measures, a force of native police was formed, consisting principally of the members of two of Loben's crack regiments. The principal recommendation of such a force was its economy. The cost of a native policeman was £30 a year, while that of a white averaged £200. In the future it is proposed to govern mainly through the native rulers. The more important chiefs are to receive a monthly salary and the tribal divisions of the country are to be restored.

These startling innovations are not unaccompanied by serious misgivings. As the "Times" well says, "the partial restoration of the old state of things may suggest to the Indumas how desirable a more complete revolution would be, and the re-establishment of tribal limits, tribal organization, and tribal authority can hardly fail to make such a step seem easier than when the only government was the government of the white man." The native police were foremost in the rebellion themselves, and the complaint is general that the oppression practised by them upon others was one of the main causes of the outbreak. The company have had a bitter experience, and, as those who control it are men of marked ability, we may trust with some confidence that they have not failed to understand and to take to heart the lesson of the past.

Turkey. By a strange fatality the first disagreement between Russia and France, on the Turkish question, has come to a head, just after the marvellous reception given in Paris to the Czar and Czarina. The French Bondholders, I believe, have the largest interest in the terribly depreciated public debt of Turkey. So M. Hanotaux drafted a scheme for ameliorating Turkish finance, which would eventually benefit the French monetary classes.

The minister in charge of the Russian finances, what we would call Chancellor of the Exchequer, M. de Witte, has the reputation of being one of the ablest and keenest masters of finance to be found in all Europe. So when the scheme of M. Hanotaux came before him, he mercilessly dissected it, and carried the Emperor entirely with him, in declining to have anything to do with the arrangement proposed by France. But in order to soothe French

susceptibilities, the declination was on the ground of the unwillingness of Russia to allow British intervention in the settlement of Turkish finance. The Czar, through his minister, insisting that the settlement of the Eastern question concerned, of the Great Powers, Russia and Austria only. But although M. de Witte's iron hand has been shielded by the Emperor's velvet glove, nonetheless, has it been a slap in the face to France.

The three tailors of Tooty Street have resurrected in the person of Messrs. G. Russell, Claydon and Tara. This ridiculous triumvirate has put itself forward to form a Radical association for working the Armenian agitation on strictly party lines, and for superseding Lord Salisbury as Prime Minister, to make way presumably for Mr. G. Russell. His name is the only one of the three I remember to have heard of. He is a cadet of the noble house of Bedford, with every member of which---always excepting that precious crank, Earl Russell,---he has quarrelled. He is a most bump-tious man, a sort of Christian Socialist, who, while boasting of his loyal adherence to the Church of England, does not scruple to appear on nonconformist platforms, to abuse it, and get intoxicated by the easily won plaudits of members of the Liberation Society. He is a man that would never have been heard of but for his slavish sycophantish flunkeyism of Mr. Gladstone, who rewarded him with £1,500 a year, in his last Ministry as Under Secretary for India. Like Mr. Caine, Mr. Shaw, Mr. Balfour, and others, he lost his seat at the general election last year and so relieved the House of Commons of the presence of the "Prince of Prigs" as he is called. The whole scheme is so fragrant of Hanley and Colney Hatch, one wonders if the three are not qualifying for an investigation by the Commissioners in lunacy!

LOOKING FROM THE LONELY ROCK.

THE island of St. Paul is merely a great rock in the Southern Ocean. It is the top of a volcanic mountain. There are no means of sustaining life to be found on it. The nearest inhabited land is Australia or Africa. To that ugly and desolate refuge came a boat containing nine persons---two of them women. They had food---on short allowance, for perhaps a week. In less than three days they were half insane from anxiety. Water, water, water everywhere, but no help. On the fifth day, at dawn, a brig hove to off the island. They saw her. Shouting, praying, weeping, they stumbled to the beach, and were rescued. It was one chance in a hundred. I'll tell you why some other time.

But, alas! isn't it as bad or even worse on land? Look at the physical wrecks in homes, in hospitals, and answer me. One perishes of privation from snipewreck. A thousand perish of privation in the midst of plenty. It isn't food they long for, but power to use it---worst and deadliest of all wants.

"My food seemed to give me no strength," says one of this army of unfortunates, "and as the hopeless, starving days passed slowly by I grew weaker and weaker. By-and-by my legs trembled and bent under me, and I could no longer get about."

The ailment which reduced me to this fearful condition began in the spring of 1892. At first I hardly recognised it for what we commonly call a disease. I felt tired, heavy, and languid, as one often does on the approach of warm weather. I fancied it would pass away, but it did not. I lost my appetite, and only ate from habit and to keep me going. I had no pleasure in it, and no warmth or glow followed it, as happens always when one is well. No matter how light and simple the repast was, or how careful I had been to select things that would not be apt to hurt me, the result was the same. No sooner had I swallowed it than my stomach sides full of pain. If you will follow me so to put it, my food appeared to strike back at me, as though I had no right to use it.

There was a nasty bitter flavour in my mouth, more or less head-ache, and a kind of nervousness, which was new in my experience, as it was depressing and cheerless.

Home remedies failing to help me, I consulted a doctor, but his prescriptions benefited me no more than our domestic medicines had done. My flesh and strength grew less, and I felt like one who has missed his way and looks in vain for a guide to point the road home.

Finally I commenced attending the Leamington Hospital, and continued to do so for twelve months, but the treatment they gave me had no better effect than all the rest. You can hardly understand how weary I got of taking drugs. I turned almost with loathing from every new dose---not because of its taste, but because they deceived my hopes; they were of no use to me.

In this state I was, when in March, 1894, a friend urged me to try Mother Seigel's Syrup. On account of the very reasons I have mentioned, I hated to experiment with any more medicines. But I overcame this aversion (most fortunately for me) and got a bottle of Mother Seigel's Syrup from Mr. Judd, the chemist, in Leamington, and after great improvement. I had no pain after eating, and my food felt right, as I grew stronger my nerves that by the continued use of it as vigorous and well as ever. I have had no relapse, and have every reason to think my cure a permanent one. You are welcome to publish my letter. (Signed) (Miss) Lucy Eden, Tachbrook, near Leamington, September 26th, 1895.

We hope Miss Eden's recovery may indeed prove permanent, and if it does she will find no words too strong when she speaks of the remedy which wrought it. But oh, the vast multitude who still stand, like the shipwrecked people on the island, looking for rescue!---victims of that most obdurate, common and baneful of diseases, chronic dyspepsia. It is for their sakes that Miss Eden kindly writes her statement, and for their sakes we print it. May it reach many of them!

Sir George Chesney Memorial Committee.

CHAIRMAN:

General Sir Henry W. Norman.

MEMBERS:

T. Marquess of Lansdowne, Field Marshal Lord Roberts, Mr. George Allen, Colonel Sir W. Ardagh, Sir Stuart Bayley, Mr. W. M. Blackwood, Sir Edward Braddon, Rev. A. Butler, Colonel Sir G. S. Clarke, General Sir E. Colles, Sir Auckland Colvin, Sir John Danvers, General C. H. Dickens, Sir Mortimer Durand, General Sir W. Stirling Hamilton, Captain Hext, R. N., Mr. A. P. Howell, Sir W. W. Hunter, Lieut.-Genl. M. J. Innes, General Sir Allen Johnson, Sir H. S. King, M. P., Mr. A. Lawrence, General Sir R. Low, Sir Alfred Lyall, General Sir D. Newmarch, Sir Andrew Scoble, Field Marshal Sir Lintorn Simmons, Field Marshal Sir Donald Stewart, General R. Strachey, General Sir A. Taylor, Mr. Meredith Townsend, Mr. W. C. Unwin, General Sir George White and General Sir E. Williams.

Memorial

TO THE LATE

SIR GEORGE CHESNEY, K.C.B., R.E., M.P.

A Meeting was held, on the 24th April, at the Royal United Service Institution, of some of the friends of the late Sir George Chesney, to consider the question of the commemoration of his distinguished services as Soldier, Administrator, Statesman, and Author. General Sir John Innes presided, and was supported by Field Marshals Sir Lintorn Simmons and Sir Donald Stewart, and other friends of Sir George Chesney. To carry out the object of the Meeting, a General Committee was formed, which included the gentlemen then present, and in addition, the Marquess of Lansdowne, Field Marshal Lord Roberts, General Sir George White, Sir Andrew Scoble, Sir Alfred Lyall, Sir H. S. King, Sir W. W. Hunter, Mr. Meredith Townsend, General Richard Strachey, Mr. W. M. Blackwood, and others.

The Memorial should take was left for the future consideration of the Committee, as it would depend on the amount subscribed, but suggestions tended towards a bust of Sir George for the India Office, and a medal for his contributions to Military Literature. It was resolved to limit each subscription to a maximum of three guineas.

Subscriptions will be received by Lieutenant-General J. J. Innes, 9, Lexham Gardens, Cromwell Road, London, W.

Secretary

SECRETARY FOR INDIA:

His Excellency General Sir George White, V. C., G. C. B., the Hon'ble Major-General Sir John Innes, K. C. I. E., Lieutenant-General Sir J. D. Lockhart, K. C. B., K. C. S. I., His Lieutenant-General Sir C. Mansfield C. Duncan, Major-General J. Duncan, Major-General G. E. L. S. Sanford, C. B., C. S. I., Major-General G. de C. Morton, C. B., Major-General G. de C. Morton, Brigadier-General G. de C. Morton, Captain J. H. de C. Morton, Colonel W. S. S. Bisset, Colonel E. de C. Morton, Colonel T. Deane.

Hon'ble Secretary:
I would be glad to receive your advice.
Simla.

Subscriptions will be received by Messrs. King, Kimball & Co., Bombay; Messrs. King, Hamilton & Co., Calcutta; and by the Alliance Bank, Simla, and its branches at Calcutta, Cawnpore, Darjeeling, Lahore, Murree, Mussoorie, Pindi and Umballa. Subscription limited to a maximum of Rs. 32 in any one instalment. By order of the Committee,
J. E. Col.,
Secy.

Simla, 18th July, 1896

"LINSEED COMPOUND," Trade Mark of KAY'S COMPOUND ESSENCE OF LINSEED.

"LINSEED COMPOUND," a demulcent expectorant for Coughs, Colds, and Chest Complaints.

LINUM CATHARTICUM PILLS, digestive, corrective, and agreeably aperient.

KAY'S CUE CEMENT.—Tips Billiard Cues firmly. "Your Cement is the best I have ever used."—JOHN ROBERTS (Champion), 1866.

KLINX.—New white inorganic Cement, almost hydraulic, for Pottery, Porcelain, &c.

COAGULINE.—Transparent Cement, for all broken articles. Manufactory, Stockport, England.

CHESHIRE BIRD LIME.—For Mosquitoes and noxious insects. In tin boxes. To spread on paper, twigs, twine. KAY BROTHERS, LTD., Stockport, England.

Don't Be Blind.

Don't refuse to believe in a thing, till you've tried it. Thousands of people suffer the indescribable torture of RHEUMATISM because they have never heard of

Little's Oriental Balm

or because they are blind to their own interest and to the fact that it is a most powerful pain-killer and relieves rheumatic aches almost instantly. It soothes the nerves, allays inflammation of the flesh and quickly penetrates to the bones themselves. There is no reason why any one should suffer with Rheumatism if they have the time to pay for a bottle of this refreshing remedy.

BEECHAM'S

MUSIC PORTFOLIO.

After an unexpected delay, the further supply of volumes No. 1 to 8 has arrived, and orders which have been duly registered are being executed in rotation. As previously intimated, the Portfolio consists of 8 volumes containing 240 of the most popular Songs and Airs of the day.

Price Re. 1-12-0, postage free, V.P.P., charges extra.

Owing to the success with which the Portfolio met in England and elsewhere our Principal has issued two further volumes, viz:—Nos. 9 and 10, containing 60 Songs and Airs, and we are prepared to supply these at 3½ annas each. Cash with order only.

Journalism.
r. Skrine
re fortu-
himself,—

The career of "An Indian Journalist" as
described by F. H. Skrine of the Indian Civil
Service is exceedingly interesting.

Mookerjee's letters are marvels of pure dic-
tion which is heightened by his nervous style.

The life has been told by Mr. Skrine in a
very pleasant manner and which should make
it popular not only with Bengalis but with all
those who are able to appreciate merit unmar-
red by ostentation and earnestness unspoiled
by harshness.—The *Muhammadan*, (Madras)
Oct. 5 1895.

The work leaves nothing to be desired either
in the way of completeness, impartiality, or
lifelike portrayal of character.

Mr. Skrine deals with his interesting subject
with the unflinching instinct of the biographer.
Every side of Dr. Mookerjee's complex char-
acter is treated with sympathy tempered by
discrimination.

Mr. Skrine's narrative certainly impresses
one with the individuality of a remarkable man.

Mookerjee's own letters show that he had
not only acquired a command of clear and
flexible English but that he had also assim-
ilated that sturdy independence of thought and
character which is supposed to be a peculiar
possession of natives of Great Britain. His
reading and the stores of his general informa-
tion appear to have been, considering his op-
portunities, little less than marvellous.

One of the first to express his condolence
with the family of the deceased writer was the
present Viceroy, Lord Egin. Mookerjee ap-
pears to have won the affection not only of the
dignitaries with whom he came in contact, but
but also of those in low estate.

The impression left upon the mind upon
laying down the book is that of a good and
able man whose career has been graphically
portrayed.—The *Englishman*, (Calcutta) Oc-
tober 15, 1895.

SPECIFICS

for all ordinary diseases, like Fever, Cough, As-
thma, Phthisis, Diabetes, &c., including dis-
eases brought on by irregularities of kinds.
Catalogues, containing full accounts of diseas-
es and remedies, are transmitted on applica-
tion. Prescriptions, with or without medicines,
sent to every part of India and Ceylon,
Cape Colony, and the British Isles, on receipt
(by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from
every quarter.

CATARRH.**Hay Fever, Catarrhal Deafness.****A NEW HOME TREATMENT.**

Sufferers are not generally aware that these

diseases are contagious, or that they are
due to the presence of living parasites in the
lining membrane of the nose and eustachian
tubes. Microscopic research, however, has
proved this to be a fact, and the result is that
a simple remedy has been formulated whereby
these distressing diseases are rapidly and per-
manently cured by a few simple applications
made at home by the patient once in two
weeks. A pamphlet explaining this new treat-
ment is sent on receipt of 2½d stamp by
HUTTON, DIXON, 43 & 45 East Bloor St
TORONTO, Canada.
